Introduction

What DT POS Enterprise is, who it is for, and how this guide is organised.

About DT POS Enterprise 6

Complete module list 7

How to read this guide 10

OVERVIEW

1.1 About DT POS Enterprise

A complete point-of-sale and back-office system for restaurants, cafés, fast-food outlets and takeaways — installed on a Windows computer and working fully offline.

What it does

DT POS Enterprise runs the whole service day in one program: taking orders at the counter or at the table, sending tickets to the kitchen, printing bills, taking cash, card and online payments, keeping credit (udhaar) accounts, tracking stock and food cost, paying staff and suppliers, and closing the day with a clean report.

Who uses it

- **Cashiers** take orders and payments at the POS screen, retrieve open bills and reprint receipts.
- **Managers** look after tables, deliveries, the menu, stock, customers, staff and reports.
- **The owner / administrator** sets the restaurant up, manages users and permissions, and closes the day.
- **The kitchen** works from printed tickets (KOT) or from the Kitchen Display on a screen or TV.

How it works

- **Offline first.** All data is kept on the computer. Billing, printing and reports never wait for the internet.
- **Licensed per computer.** A licence key from Digital Target activates the software on each PC.
- **One screen per job.** Each module opens from the menu on the left; managers decide which modules each user can see.
- **Thermal printing.** 80 mm and 58 mm receipt printers, separate kitchen and token printers, and many receipt designs.

Highlights

- Fast billing with keyboard shortcuts, size and weight items, deals, discounts, promo codes and service charge.
- Dine-in floor plan with table transfer, merge and split; delivery board and self-pickup.
- Kitchen Display and Customer Display for a second screen or TV.
- Credit customers with full ledger, partial payments and recovery.
- Inventory with recipes, receiving (GRN), wastage and food-cost reports.
- Accounts, party ledgers, daily wages, HR, attendance and payslips.
- Dashboard and more than fifteen reports, with PDF, Excel and 80 mm print.
- Twenty-one built-in looks, including the DT Retail themes, plus your own custom theme.

OVERVIEW

1.2 Complete module list

Every module of DT POS Enterprise — 62 entries, 49 of them in the Offline Edition. Grouped as in the menu; the last column says which section and page of this guide explains the module.

OPERATIONS 21		
POS	Sale screen: take orders, discounts, payment, receipt and kitchen slip	4.2 · p. 25
Tables	Dining room: free and running tables, floor map, table QR codes	5.1 · p. 36
Retrieve	Retrieve: every open, held and part-paid bill	6.1 · p. 41
Delivery	Delivery board: rider assignment and customer messages	8.1 · p. 50
Pickup Orders	Self-pickup orders: ready message and hand-over	8.2 · p. 51
Rider App ONLINE EDITION ONLY	Riders update their deliveries on a phone	20.1 · p. 136
Kitchen	Kitchen display: live tickets with timers; TV mode	7.1 · p. 45
Credits / Udhaar	Bills given on credit (udhaar) and their recovery	9.1 · p. 54
Credit Customers (Ledger)	Credit by customer: ledger of bills and payments	9.2 · p. 55
Void / Comp / Cancel	Voided, complimentary and cancelled bills with reasons	10.1 · p. 57
Pending Payments	Part-paid bills: collect the remaining amount	6.2 · p. 42
Bill Reprint (Read-only)	Find and reprint any bill, read-only; reprint history	6.3 · p. 43
Foodpanda Orders	Foodpanda orders tracked apart from your own	8.3 · p. 52
Customer Portal / Website ONLINE EDITION ONLY	Online ordering page for customers	20.1 · p. 136
Online Order Approval ONLINE EDITION ONLY	Accept or reject online orders	20.1 · p. 136
Blocked Customers ONLINE EDITION ONLY	Stop abusive online customers	20.1 · p. 136
Blocked Locations ONLINE EDITION ONLY	Stop orders from chosen areas	20.1 · p. 136
Kitchen TV board	Full-screen kitchen board, opened from Kitchen → TV Mode	7.3 · p. 47
Customer Display	Order-status screen for a second monitor or TV	7.4 · p. 48
Weight panel	Side panel on the POS for items sold per kg	4.5 · p. 28
Payment screen	Cash, online, split and partial payment on the POS	4.8 · p. 31

OVERVIEW

1.2 Complete module list — continued

Marketing, inventory, accounts and staff.

MARKETING		6
WhatsApp	Send one customer a WhatsApp message from a template	13.6 · p. 77
Customers	Customer database built from your bills; loyalty points	13.1 · p. 72
Customer Map ONLINE EDITION ONLY	Customers on a map	20.1 · p. 136
CRM Insights	Retention, repeat rate and top customers	13.3 · p. 74
Contacts	Contacts: WhatsApp messages to many customers	13.4 · p. 75
Promo Codes	Discount codes with dates, limits and usage count	13.5 · p. 76

INVENTORY		6
Menu	Categories and items; sizes, weights; Excel import	11.1 · p. 61
Deals / Combos	Deals and combos at one price	11.4 · p. 64
Inventory	Stock of raw materials and shop items; low-stock alerts	12.1 · p. 66
Recipes	Ingredients per item; food cost and margin	12.3 · p. 68
Wastage	Stock thrown away, with reason and cost	12.5 · p. 70
Receiving	Supplier deliveries (GRN); updates stock and cost	12.4 · p. 69

ACCOUNTS		3
Accounts	Income, expenses, payment accounts, cash close	14.1 · p. 79
Party Master	Suppliers and account customers with ledgers	14.5 · p. 83
Daily Wages	Day-rate workers: entries, payments, advances	14.6 · p. 84

STAFF		3
HR	Employees, attendance, leaves, payslips, advances	15.1 · p. 86
Users	Sign-in accounts, roles, page access and PIN	15.4 · p. 89
Riders ONLINE EDITION ONLY	Rider list with live status	20.1 · p. 136

OVERVIEW

1.2 Complete module list — continued

Reports and administration.

REPORTS		11
Dashboard	Today and the last 7 / 30 days at a glance	16.1 · p. 92
Profitability	Revenue against food cost and wastage	16.10 · p. 101
Cost Reports	Food cost per item, consumption, stock value	16.11 · p. 102
Reports	Bills, totals, cashiers, category and product wise	16.3 · p. 94
Reports Center	Management reports and full PDF export	16.6 · p. 97
Token Module	Tandoor token register and reconciliation	16.12 · p. 103
Sales Report	Printable sales report and thermal shift report	16.7 · p. 98
Advanced Item/Variant Reports	Item and size-by-size sales from every source	16.8 · p. 99
Admin Sales History	Permanent sales archive for the administrator	16.9 · p. 100
Bill / KOT Edit History	Timeline of every bill and KOT change	10.3 · p. 59
Bill Editor	Correct any bill; every change is logged	10.2 · p. 58

ADMIN		12
Staff (Waiters & Riders)	Waiters and riders lists used by the POS	15.3 · p. 88
Settings	Restaurant, charges, looks, tables, printing, displays	18.1 · p. 110
Printers & Print Server	Printer Center: printers, roles, margins, quality	19.1 · p. 123
Printer Diagnostic Center	Detect, test and troubleshoot printers	19.12 · p. 134
Branches ONLINE EDITION ONLY	Several branches in one account	20.1 · p. 136
Branches Map ONLINE EDITION ONLY	Branches on a map	20.1 · p. 136
Live Map ONLINE EDITION ONLY	Branches and devices on a live map	20.1 · p. 136
Live Riders Map ONLINE EDITION ONLY	Live rider positions	20.1 · p. 136
Backup	Backup, restore, reset and erase data	17.4 · p. 108
Devices ONLINE EDITION ONLY	Approve the devices of an account	20.1 · p. 136
Software Version ONLINE EDITION ONLY	Version roll-out for the account	20.1 · p. 136
Day Close	Shift report, archive, clear the day, reset sale	17.1 · p. 105

Modules marked **online edition only** need the internet or a cloud account. In the Offline Edition they are removed from the menu (chapter 20). Which modules each user sees is decided by their role and page access (15.5, Appendix A).

OVERVIEW

1.3 How to read this guide

Each module has its own page: a picture of the screen taken from the running software, what the screen is for, and step-by-step instructions.

Conventions

- **Bold violet text** is a button, tab or field exactly as it is labelled on the screen.
- **Settings → General** is a path: open Settings, then the General tab.
- F4 is a key on the keyboard.
- 1 Numbered yellow circles on a picture match the numbered list beside it.

Notes in the margin

Tip. A quicker way, or a habit that saves trouble later.

Take care. An action that changes or removes data.

Status. A feature that is limited, switched off in this edition, or needs the Windows desktop app.

About the pictures

All pictures were captured from DT POS Enterprise v1.20.1 using a fictional **Sample Restaurant** in Burewala with a month of sample sales. Names, phone numbers and amounts are examples only.

The pictures show the **Royal Purple** look, the default DT Retail theme. Your screens may use another colour theme (chapter 3.3); the buttons and their places are the same in every theme.

A few screens behave slightly differently in the Windows desktop app than in these pictures, which were taken in a browser window — mainly printer selection and silent printing. Those differences are pointed out where they apply.

Getting help

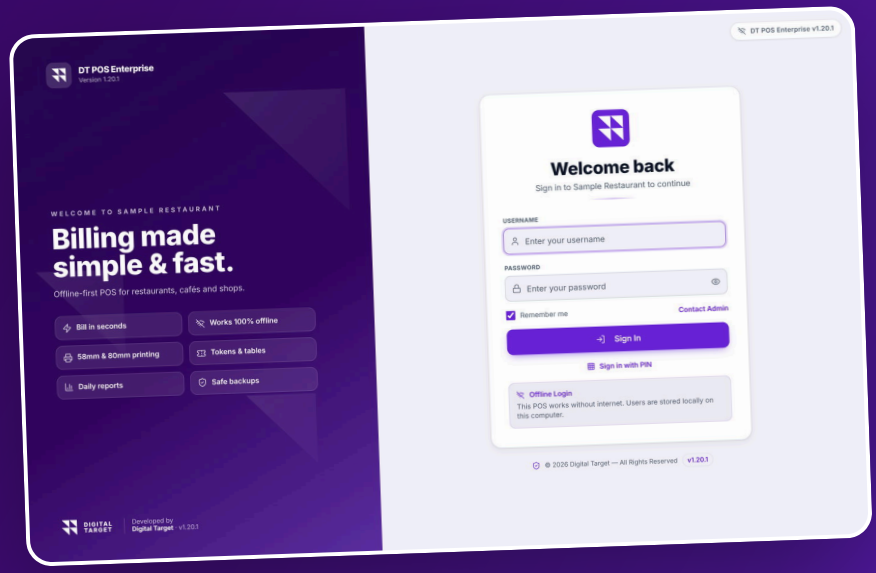

Digital Target support: **+92 345 1873354** (call) · **+92 332 2373354** (WhatsApp) · **digitaltarget.digital@gmail.com**. The Contact Admin link on the sign-in screen opens the same details.

02

Getting started

Install, activate and sign in for the first time — and the checklist that makes the first day go smoothly.

Starting the software	12	Quick sign-in with a PIN	15
Activating the licence	13	Support details — Contact Admin	16
Signing in with a username and password	14	Your first day: set-up checklist	17

FIRST START

2.1 Starting the software

DT POS Enterprise is installed on a Windows PC by Digital Target or your dealer. Open it from the desktop shortcut.

Each time the software starts, the splash screen shows the product name, your restaurant's name and the version while the data is loaded from the computer.

INSTALLING

1. Run the DT POS Enterprise setup file supplied by Digital Target.
2. Connect and switch on the receipt printer (and the kitchen printer, if you have one) before the first start, so Windows lists them.
3. Start the software. On a new computer the activation screen appears first (next page).

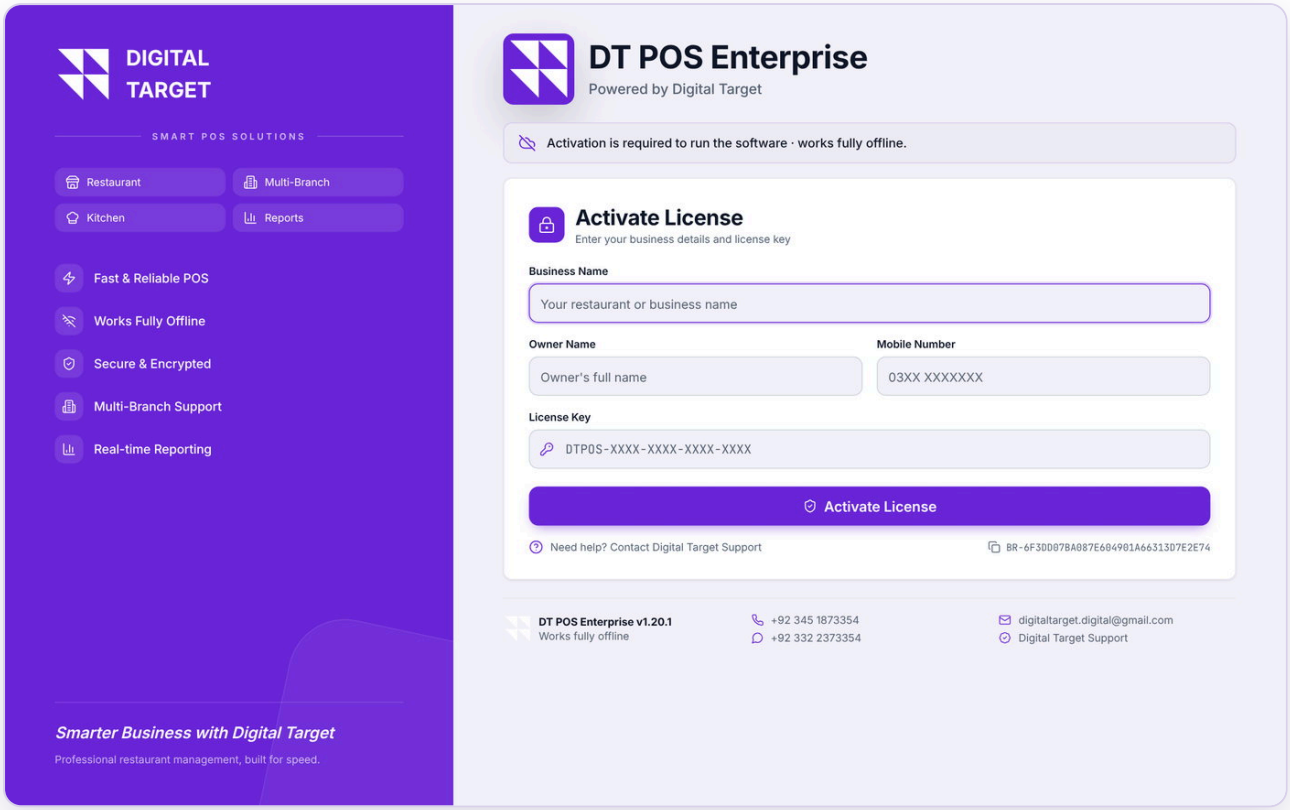

Tip. Keep the computer's date and time correct. The licence refuses to open if the clock is turned back by more than three hours.

Data stays on this PC. Orders, menu, customers and settings are saved on the computer itself, so the POS keeps working without internet. Take regular backups (chapter 17).

FIRST START

2.2 Activating the licence

The software runs only on a computer activated with a valid DT POS licence key.

1. Type the **Business Name**, the **Owner Name** and the **Mobile Number**.
2. Enter the **License Key** exactly as received — it starts with `DTPOS-`.
3. Press **Activate License**. The sign-in screen opens.

The code at the bottom right of the card identifies this computer. Press it to copy it, then send it to Digital Target if support asks for it.

AFTER ACTIVATION

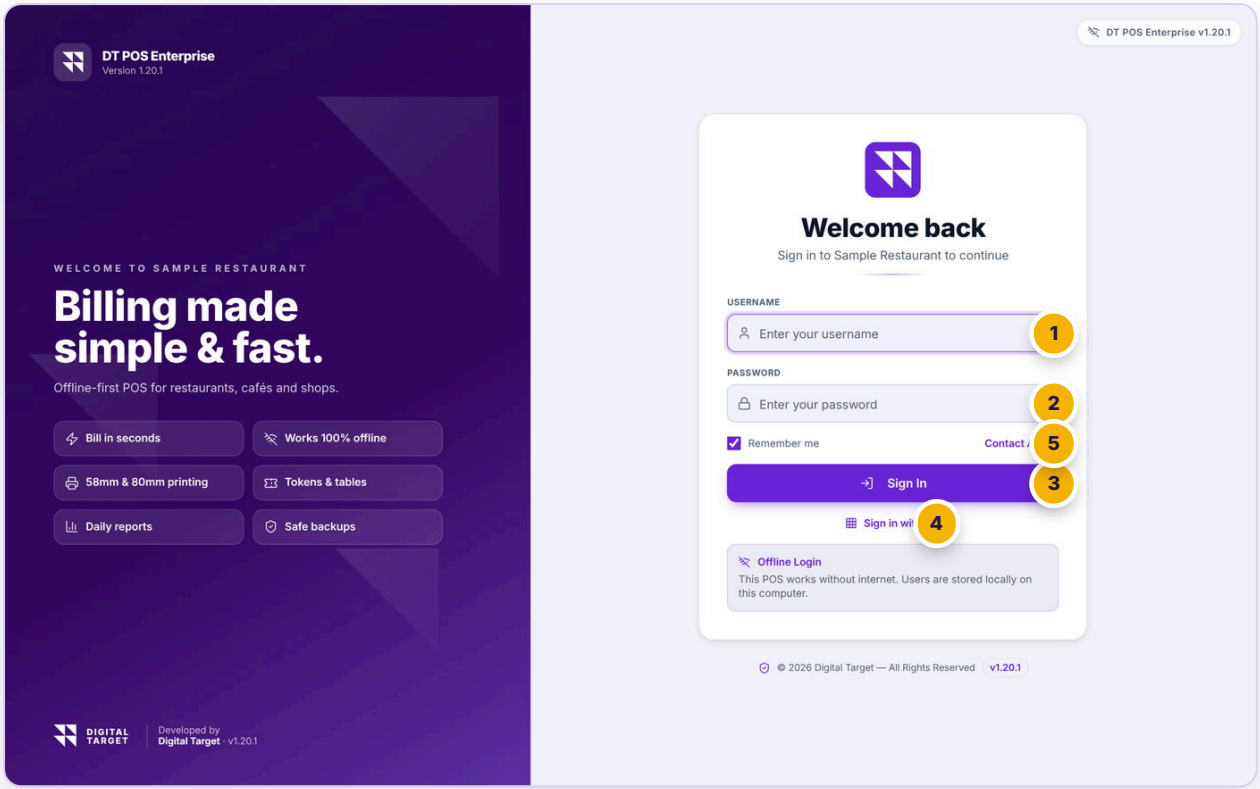

- The licence is checked on the computer itself each time the software opens, so it works offline.
- When the PC is online, the status is refreshed in the background (for example a renewal or a suspension by Digital Target).
- A licence limited to a number of devices refuses extra computers.

Status. Licence keys, renewals and device limits are issued by Digital Target from its own administration console. That console is not part of the restaurant software and is not covered in this guide.

SIGN IN

2.3 Signing in with a username and password

Everyone who uses the POS signs in with their own account, so every bill, discount and change carries their name.

1. **Username** — given by the administrator.
2. **Password** — the eye icon shows what you typed.
3. **Sign In** — or press `Enter`.
4. **Sign in with PIN** — appears once any user has a quick-login PIN (2.4).
5. **Contact Admin** — Digital Target phone, WhatsApp and email.

Remember me (on by default) keeps the username filled in next time.

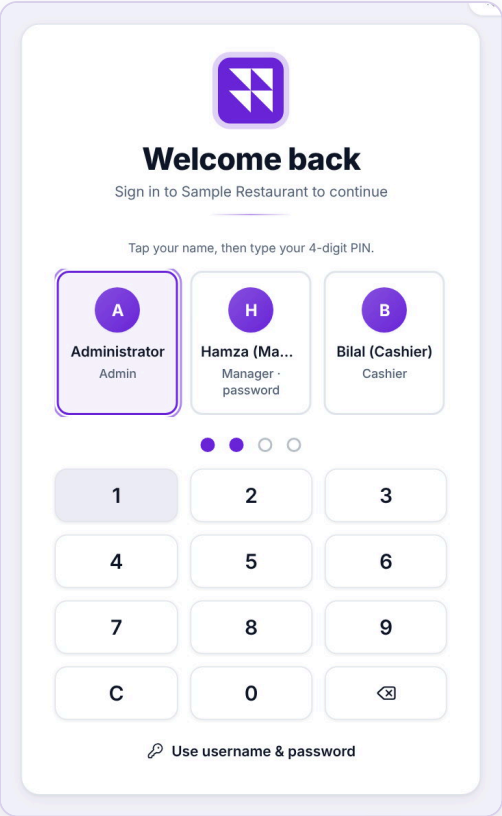

The first administrator account is created during installation: username `admin`, password `admin123`. **Change this password on the first day** in **Users → Edit**.

> Users are stored on this computer. Signing in never needs the internet.

SIGN IN

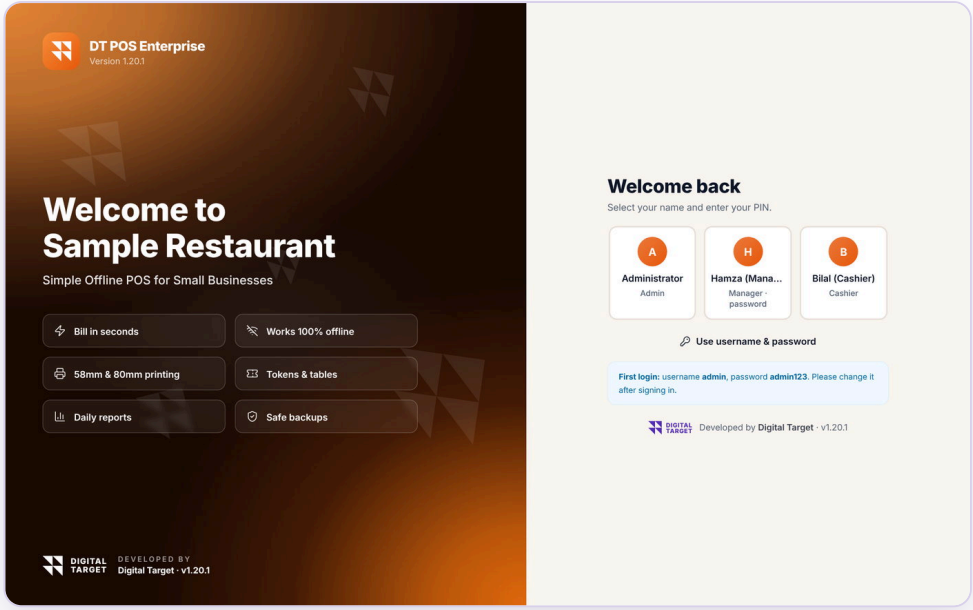

2.4 Quick sign-in with a PIN

A busy counter can switch cashiers in two seconds: tap your name and type a 4-digit PIN. The password always keeps working.

Sign in with PIN — tap your name, then the PIN.

1. Press **Sign in with PIN** under the Sign In button.
2. Tap your name card. Then type your PIN on the keypad or the keyboard — the fourth digit signs you in.
3. A user without a PIN is taken to the password form with the username filled in.

Espresso Orange look — the PIN page is the sign-in page.

The PIN is set per user in **Users → Edit user → Quick login PIN** (chapter 15.5). No one gets a PIN automatically.

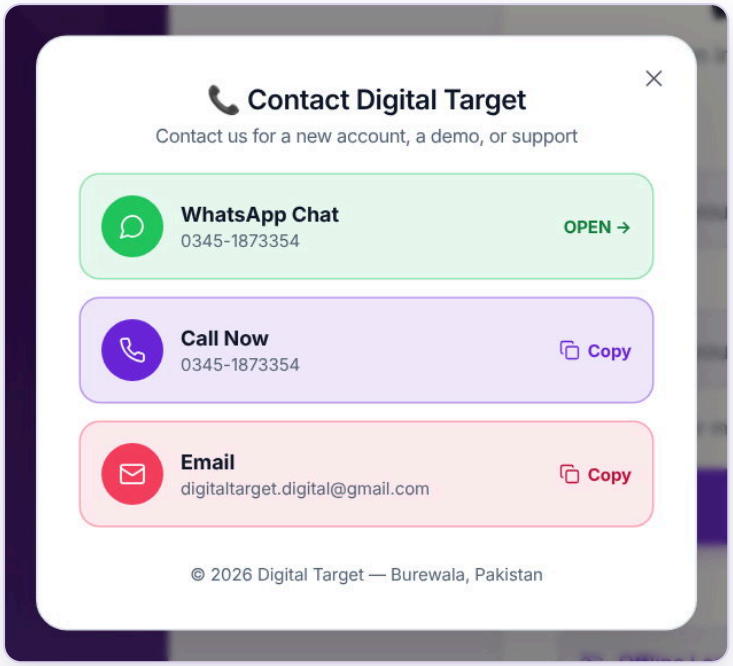

> **Safety.** After five wrong PINs, that user's PIN sign-in is locked for one minute. The password still works.

In the Espresso Orange theme the sign-in page opens on the PIN cards and shows a reminder while the factory admin password is still in use.

SIGN IN

2.5 Support details — Contact Admin

Help is one click away on the sign-in screen, before anyone has signed in.

The **Contact Admin** link opens Digital Target's contact card:

- **WhatsApp Chat** — opens a chat with a message already written ("I would like to get an account for DT POS...").
- **Call Now** — dials the support number; **Copy** copies it.
- **Email** — opens a new email to Digital Target; **Copy** copies the address.

Use it to request an account, a demo or support. The same details are in Appendix C.

CHECKLIST

2.6 Your first day: set-up checklist

Work through these steps once, as the administrator, before the first customer arrives. Each step points to the chapter with the details.

1 · Restaurant details

Settings → General: name, address, phones, currency, tax, service charge and discount buttons. These print on every bill. *(18.1)*

2 · Printers

Printers & Print Server: add the receipt printer and the kitchen printer, map them to roles, then print a test slip. *(19)*

3 · Menu

Menu: add categories and items, or import your whole menu from Excel. Set sizes for pizzas and per-kg rates for weight items. *(11)*

4 · Tables

Settings → Tables: add floors, tables and kitchens (stations). Add waiters under **Settings → Waiters**. *(18.5)*

5 · Users

Users: create an account for each cashier and manager, choose what each can open, and change the admin password. *(15.4)*

6 · Payment accounts

Accounts → Payment A/Cs: add the bank, JazzCash and Easypaisa accounts customers pay into, so Online and Split payments work. *(14.2)*

7 · A test bill

On the **POS**, ring up a test order, pay it and check the receipt and kitchen slip. Void it afterwards in **Void / Comp / Cancel**. *(4, 10)*

8 · Look and layout

Settings → Appearance and **Screen & Layout**: pick a theme and the POS layout for this screen. *(18.3–18.4)*

9 · End of day

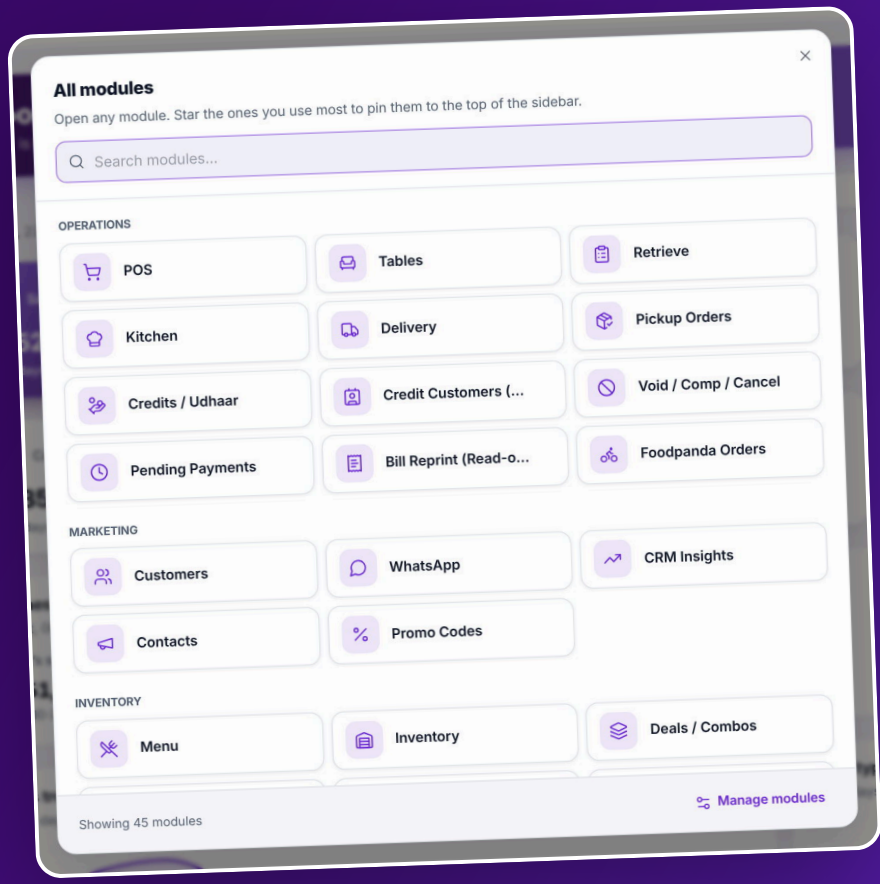

Agree who closes the day and how: **Day Close** prints the shift report and clears the day's live list; **Backup** exports a copy of all data. *(17)*

03

The workspace

The parts of the screen that are the same everywhere: the menu, the top bar, the module search, looks and user roles.

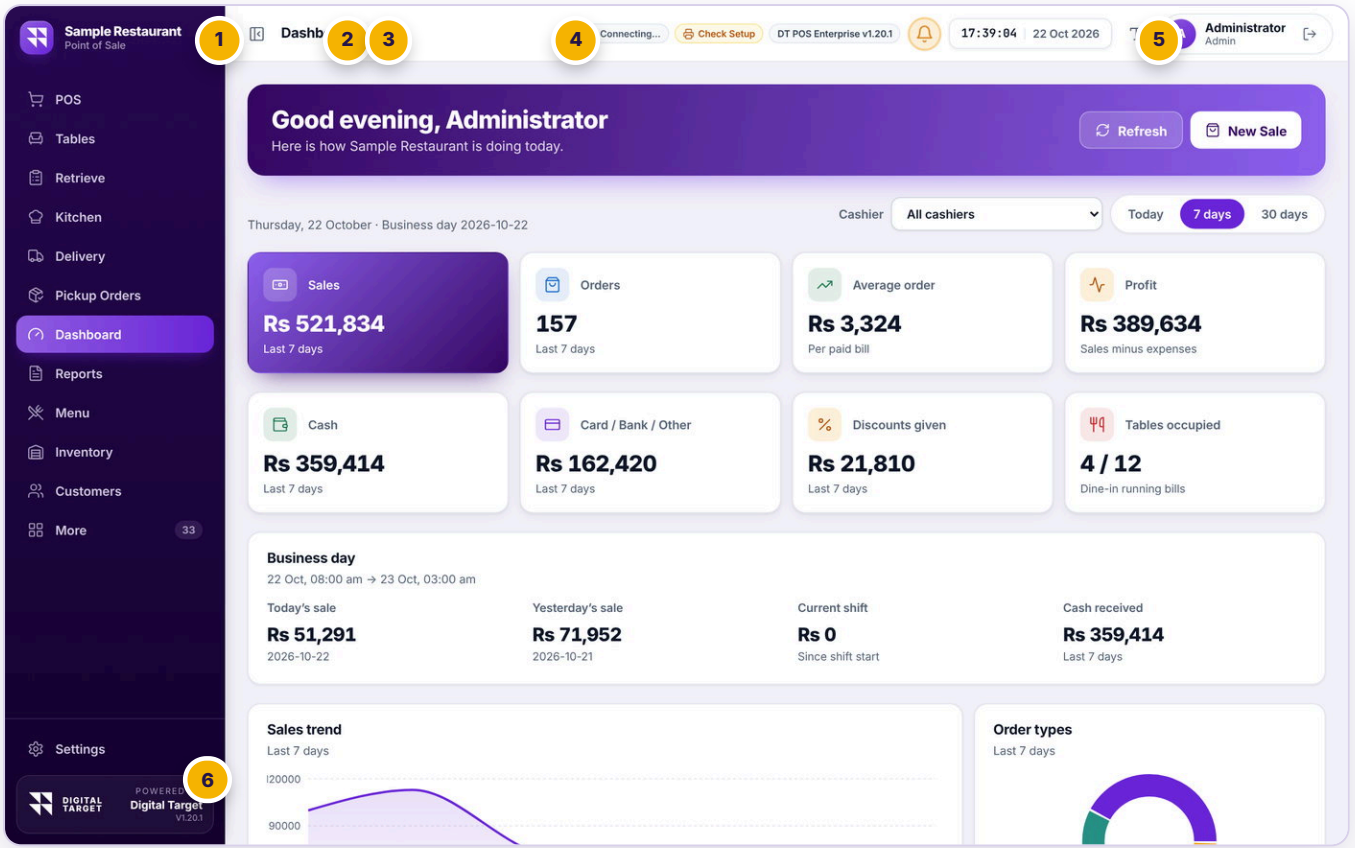

The main screen	19	Looks and themes	21
Finding any module — More	20	What a cashier sees	22

WORKSPACE

3.1 The main screen

Every module opens inside the same frame: the menu on the left, a top bar with the live status, and the module in the middle.

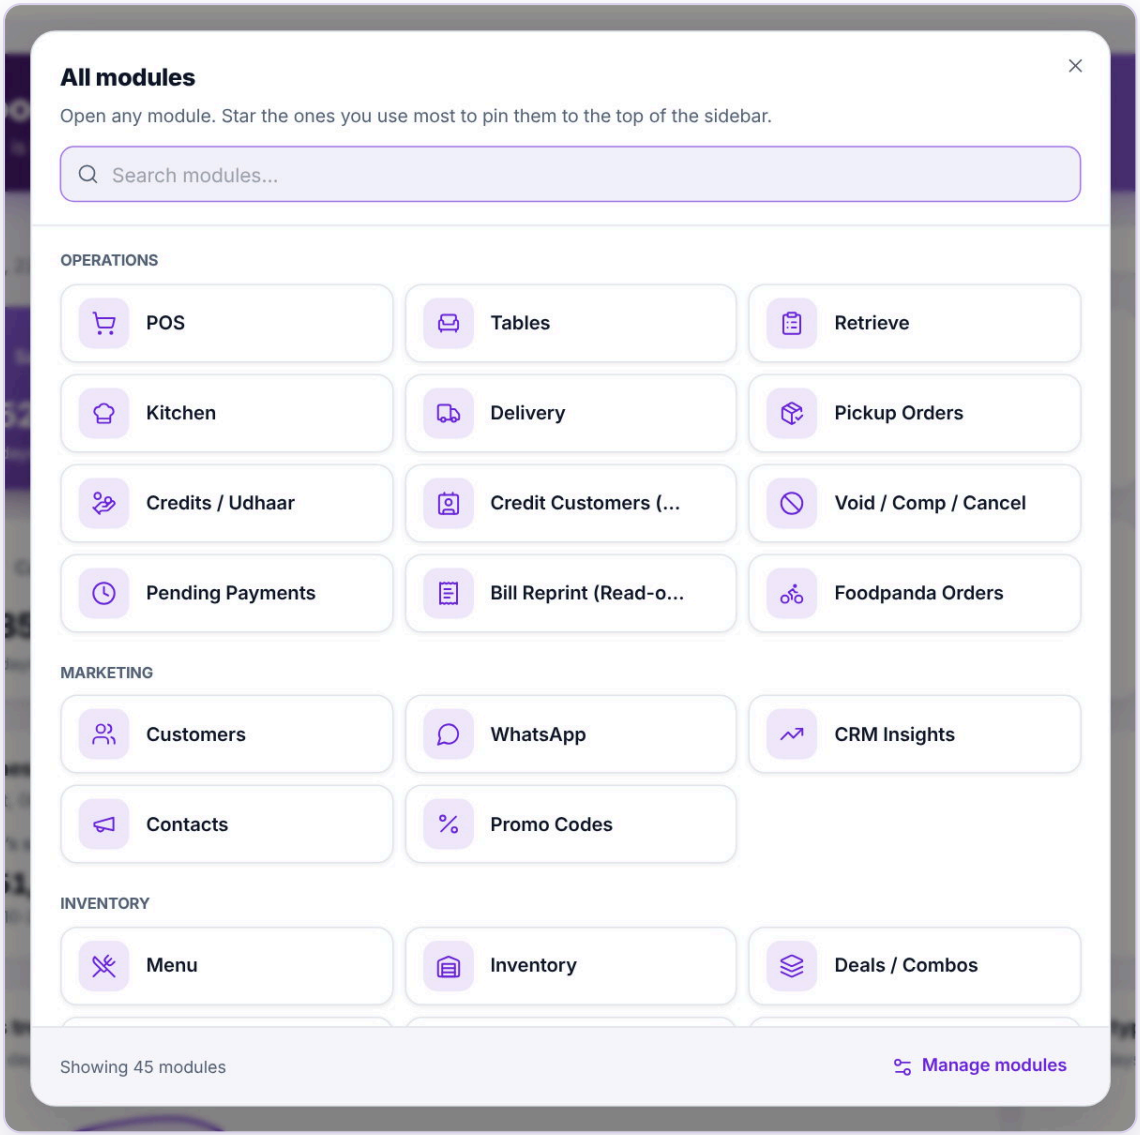

1. **Main menu** — the everyday modules, More with every other module, and Settings at the foot.
2. **Page title** — the module you are in. The button to its left folds the menu.
3. **Module search** — jump to any module by name (also on page 3.2).
4. **Status** — connection, Check Setup (printer readiness), version and notifications; then the clock and text size `T`.
5. **Signed-in user** — name and role, and the **log-out** button.
6. **Powered by Digital Target** — support contacts.

> **Tip.** The text-size button `T` makes everything larger or smaller for this screen — useful on a small or very large monitor.

WORKSPACE

3.2 Finding any module — More

The menu shows the modules used every day. Everything else is one click away under More, grouped the same way as in this guide.

1. Press **More** at the bottom of the menu, or the search icon in the top bar.
2. Type part of a name — for example `credit` or `report` — or scroll the groups.
3. Click a module to open it.

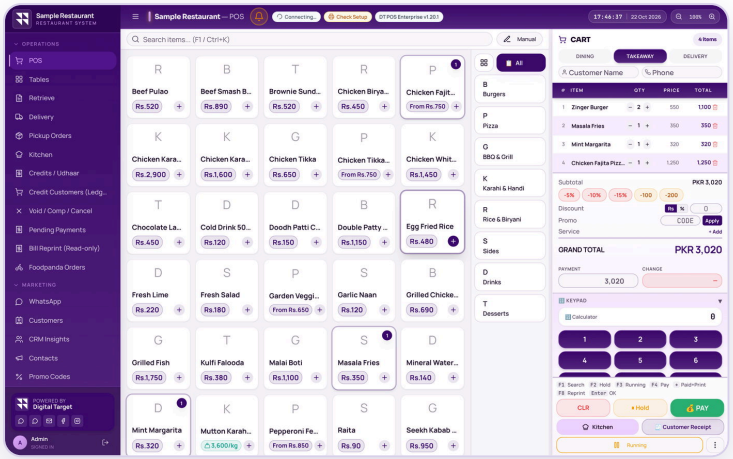

Star a module to pin it under Favorites in the menu. **Manage modules** opens **Settings → Modules**, where the administrator chooses what appears in the menu, under More, or nowhere (18.4).

Each user sees only the modules their account allows (15.4). The count beside More shows how many modules it holds.

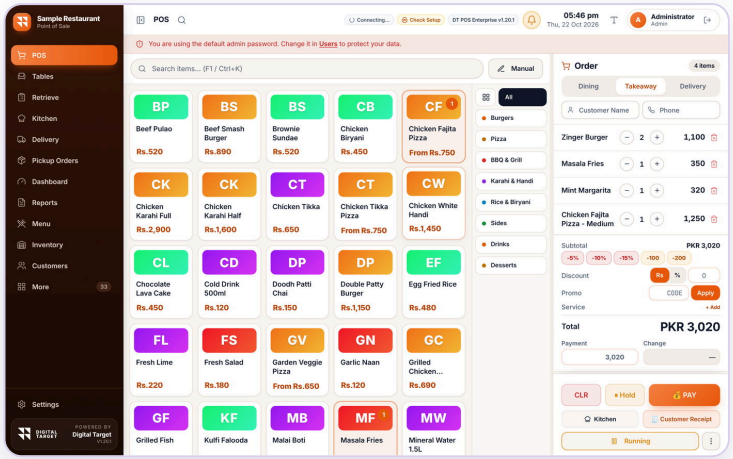

WORKSPACE

3.3 Looks and themes

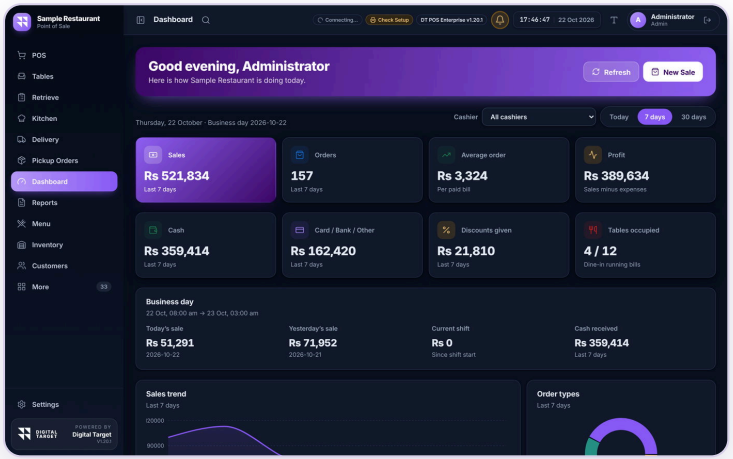

The same software in four of its looks. A theme changes colours and style only — never the data, the bills or the printing. Each computer keeps its own choice.

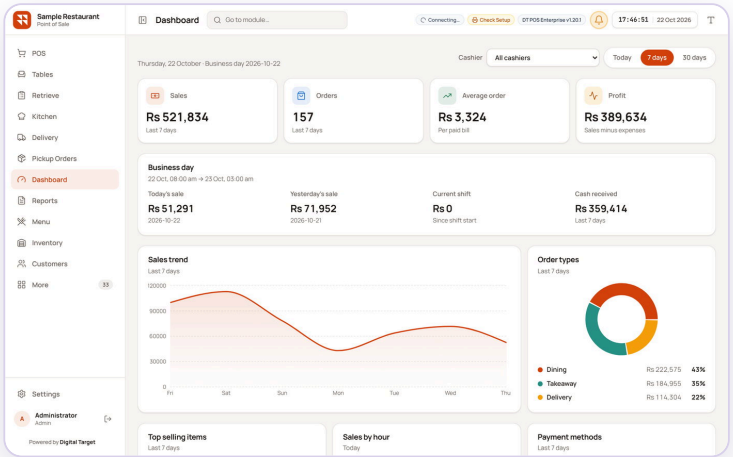

Classic — the full menu of earlier versions.

Espresso Orange (DT Retail) — with the default-password reminder.

Night (DT Retail) — a dark page for dim shops.

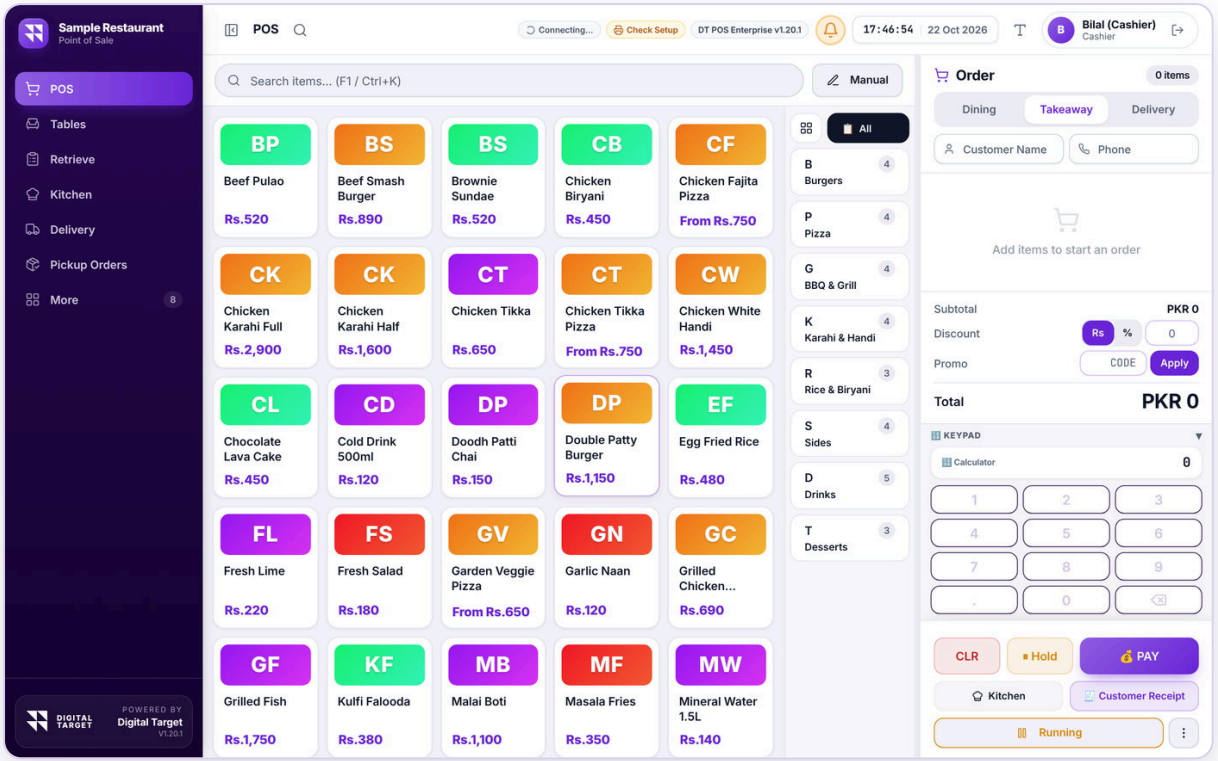

Ember (Modern) — light page, short menu.

Change the look in **Settings → Appearance**: **Modern** (13 food-colour themes), **DT Retail** (8 themes with a gradient menu and motion) or **Classic**, plus **Custom** themes you design yourself (18.3).

WORKSPACE

3.4 What a cashier sees

Users see only what their role and permissions allow. Here, the same POS signed in as a cashier.

Compared with the administrator, the cashier's menu has no Menu, Inventory, Customers, Reports or Settings, and More holds only 8 modules.

THE FIVE ROLES

- **Admin** — everything, always.
- **Manager** — daily operations, menu, stock, customers, accounts, staff and reports.
- **Cashier** — POS, tables, open bills, kitchen, delivery, pickup, credits and reprints.
- **Order taker** — POS, tables and open bills; sends orders to the kitchen but does not take payment.
- **Rider** — the rider app (online edition only).

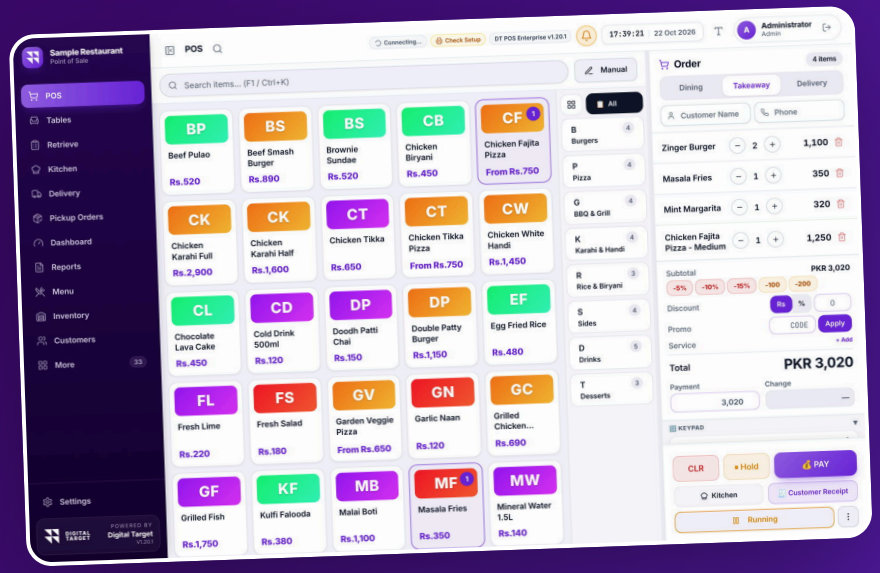

The administrator can tick extra pages and actions for any single user (15.5). The full default list is in Appendix B.

04

Selling at the POS

The sale screen: choosing the order type, adding items, discounts, taking payment and printing — the work of every shift.

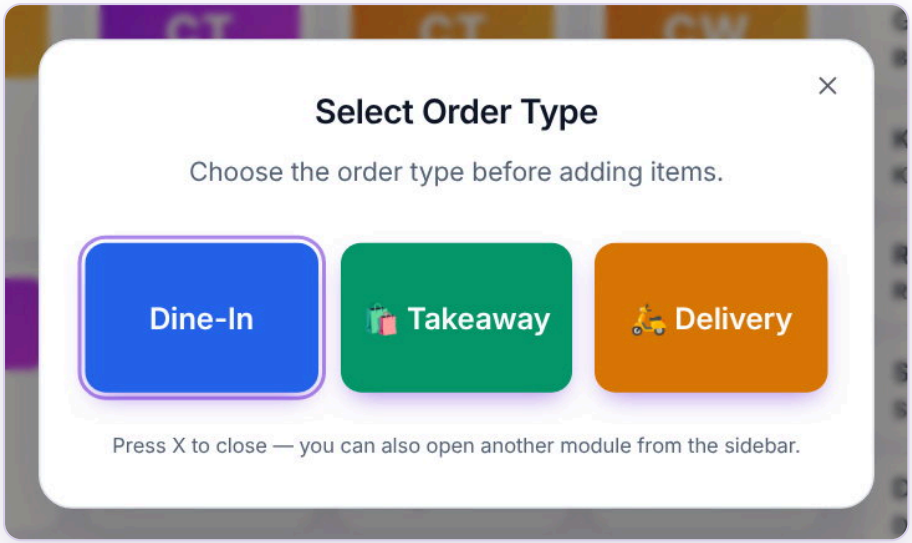

Choosing the order type	24
The sale screen	25
The bill, step by step	26
Items with sizes and the category grid	27
Items sold by weight	28
Dine-in table and delivery details	29
Discounts, promo codes, service charge and tax	30
Taking payment	31
The receipt and the kitchen slip	32
More actions: credit, void and manual items	33
Keyboard shortcuts at the POS	34

POS

4.1 Choosing the order type

When the POS opens it asks what kind of order you are starting, so the bill, the kitchen ticket and the reports are right from the first item.

- **Dine-In** — the table and waiter are asked for when you save or pay (4.6).
- **Takeaway** — customer name and phone are optional.
- **Delivery** — the customer's name, phone and address are asked for (4.6). A delivery charge can be added in Settings.

You can change the order type later with the three tabs at the top of the bill. Close the box with **×** to open another module instead.

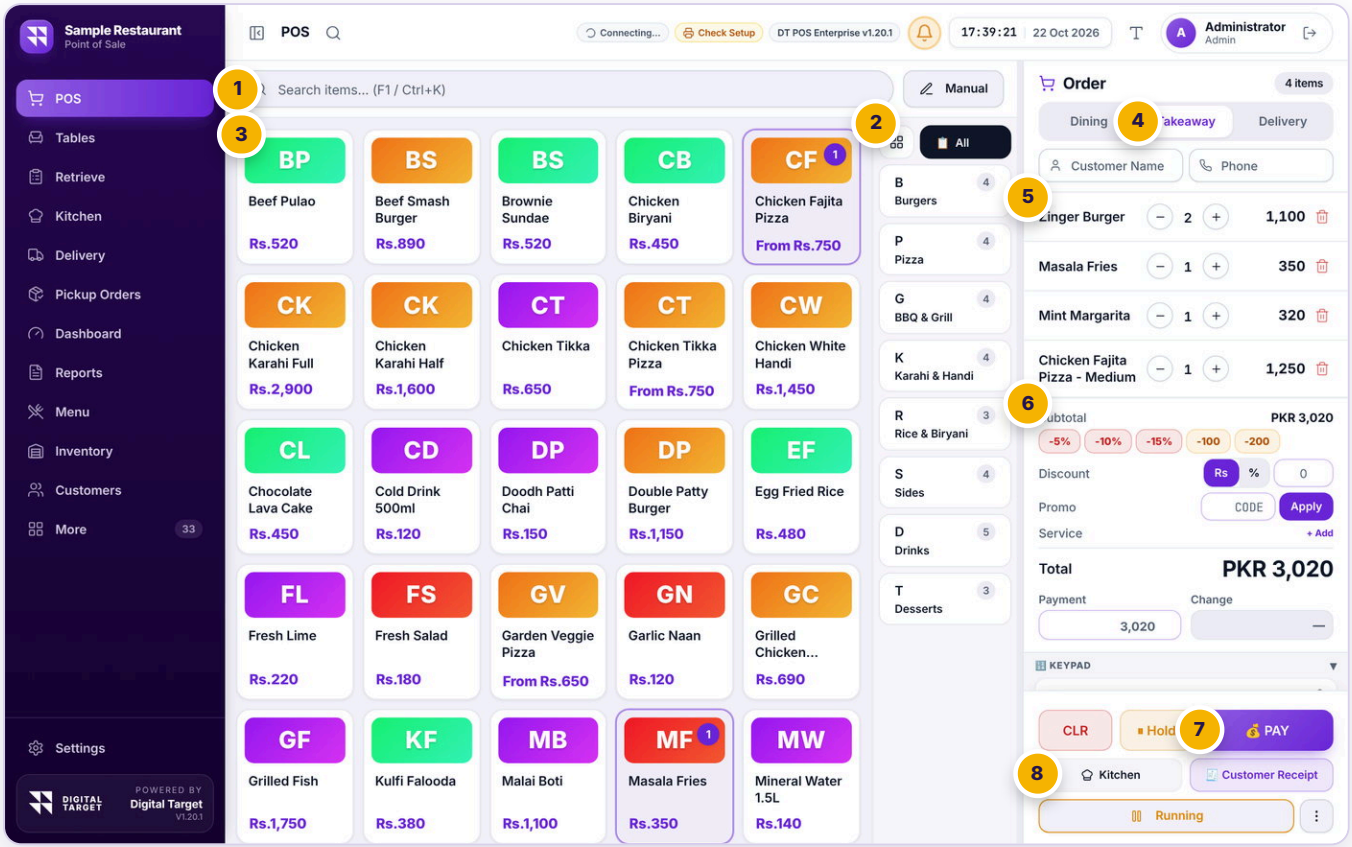

Foodpanda appears as a fourth type when Foodpanda mode is on (**Settings → Self-Pickup**, chapter 8.3).

This question can be switched off in **Settings → Self-Pickup → "Select Order Type" Prompt**; items can then be added straight away.

POS

4.2 The sale screen

Items on the left, categories in the middle, the bill on the right. Tap an item to add it; tap again to add one more.

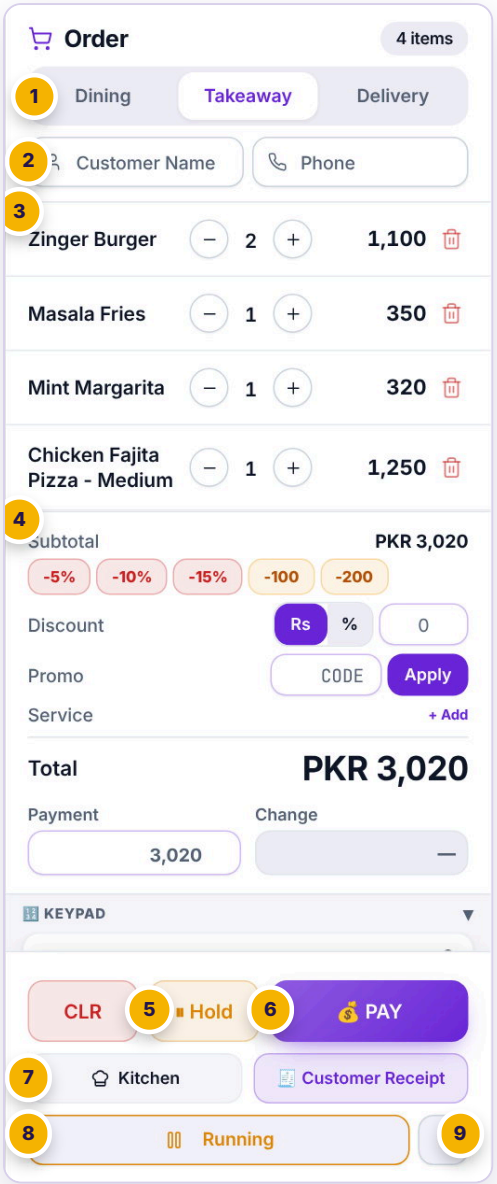

1. **Search** — type part of an item name (`F1` or `Ctrl` + `K`). **Manual** adds an item that is not on the menu.
2. **Categories** — tap one to show its items; the grid button shows them all (4.4).
3. **Item tiles** — name, price and, once added, the quantity badge.
4. **Order type** — Dining, Takeaway or Delivery.
5. **Bill lines** — change quantities with – and +, remove with the bin.
6. **Totals** — discount, promo code, service charge, total, payment and change (4.7).
7. **PAY** — opens the payment screen (4.8).
8. **Kitchen** and **Customer Receipt** — preview and print the kitchen slip or the bill.

Tip. The layout — category panel on the right, left or top, number of columns, cart width — is set per screen in **Settings → Screen & Layout**.

POS

4.3 The bill, step by step

The bill panel holds every action for the current order. Each numbered part is explained here.

1. **Order type** — Dining / Takeaway / Delivery. Locked while an existing bill is being edited.
2. **Customer** — name and phone. Typing suggests saved customers; the bill then appears in their history and loyalty.
3. **Lines** — item, quantity, line total. Tap a line to select it for the keypad.
4. **Totals** — preset discount buttons (−5% … −200), **Discount** in Rs or %, **Promo** code, **Service** charge (**+ Add**), **Total**, then **Payment** received and **Change**. The **Keypad** below enters quantities, prices or cash.
5. **Hold** (`F2`) — parks the order unpaid, for example for a customer who will come back. **CLR** empties the bill.
6. **PAY** (`F4` or `Enter`) — opens the payment screen.
7. **Kitchen** — saves the order as running and shows the kitchen slip. **Customer Receipt** — shows the bill to print or hand over.
8. **Running** (`F3`) — saves the order as open (sent to the kitchen) without payment. When editing an existing bill this reads **Update**.
9. **More actions** — Credit (udhaar), Void, Cancel Edit, and the cart width.

A TYPICAL TAKEAWAY

1. Choose **Takeaway**, tap the items, adjust quantities.
2. Apply a discount or promo code if needed.
3. Press **PAY**, enter the cash received and press `Enter`.

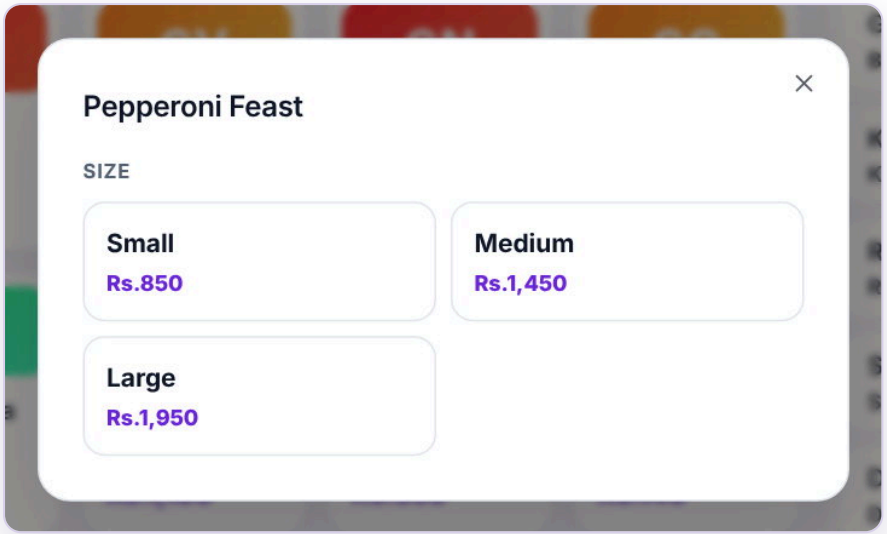

A TYPICAL DINE-IN

1. Choose **Dining**, add the items, press **Running**. Pick the table and waiter; the kitchen ticket prints.
2. Later, add more items to the same table from **Tables** or **Retrieve** and press **Update** — only the new items go to the kitchen.
3. When the guests ask for the bill, open it again and press **PAY**.

Tip. `+` on the keyboard pays the bill in cash at once and prints it — the fastest way for a queue.

POS

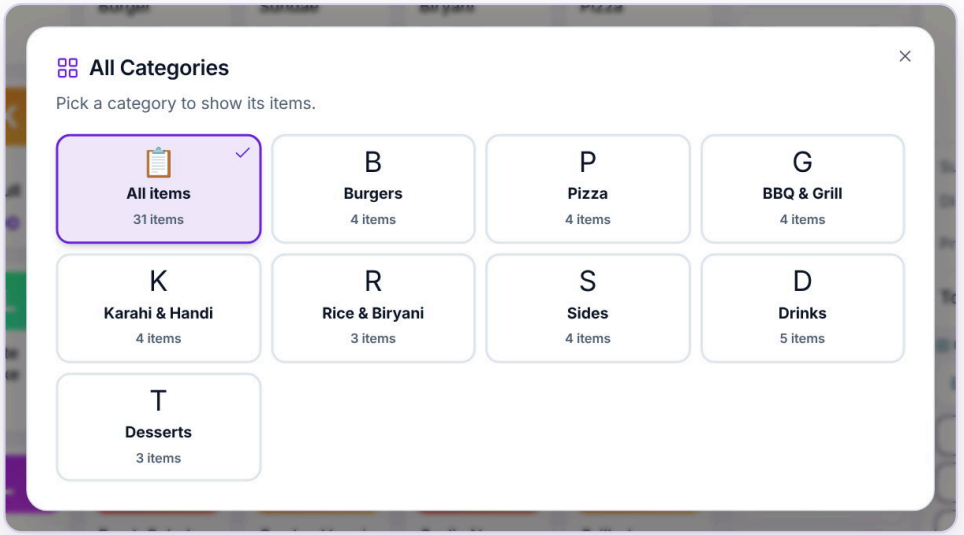

4.4 Items with sizes and the category grid

Choose a size — shown for items priced by size or inch.

Pizzas and other items with sizes ask which size to add. Each size has its own price, set in the menu (11.2). The bill line and the kitchen slip show the size, for example *Chicken Fajita Pizza – Medium*.

Tiles of such items show the lowest price as **From Rs.750**.

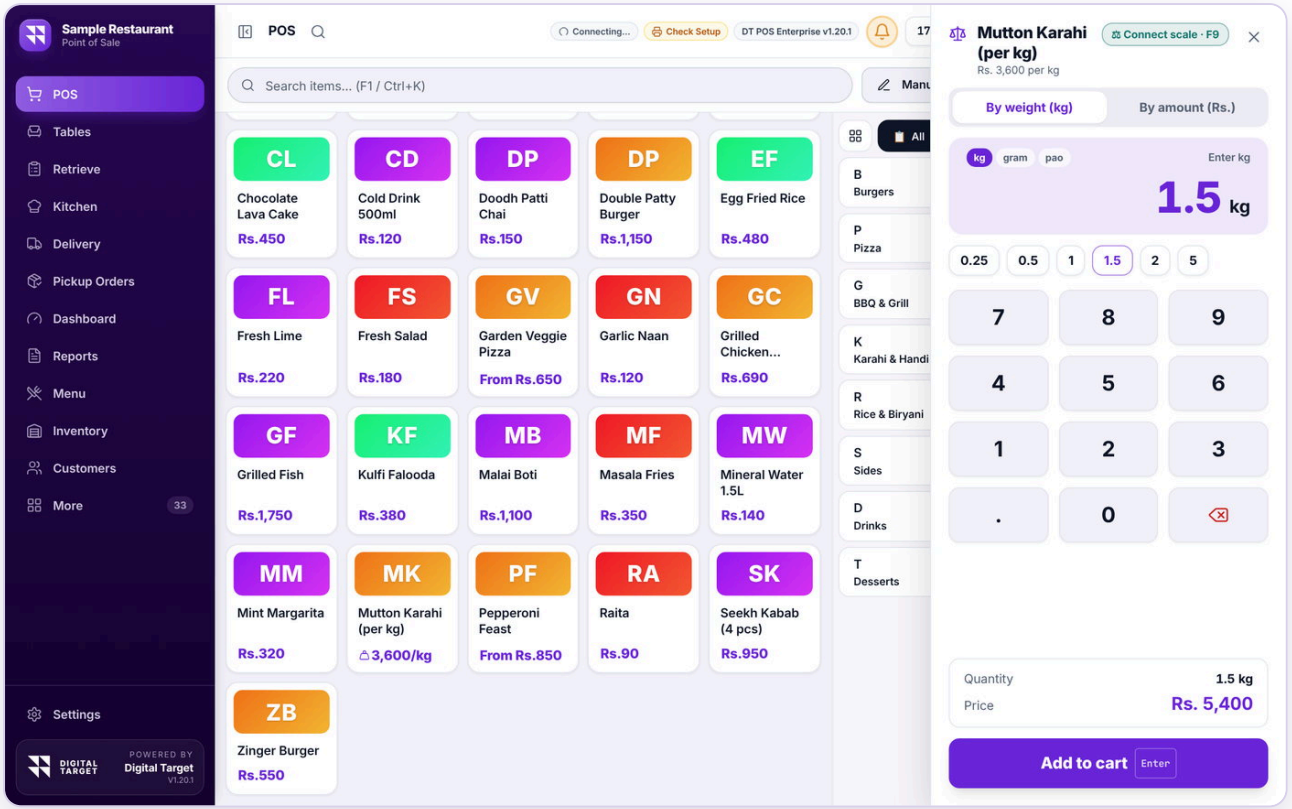

All categories — the grid button next to All.

Shows every category as a box with its picture or icon and the number of items. Pick one to show only its items, or **All items** to show everything. Useful when there are more categories than fit in the panel.

POS

4.5 Items sold by weight

Items priced per kilogram open a panel at the side: sell by weight, or by the amount the customer wants to spend.

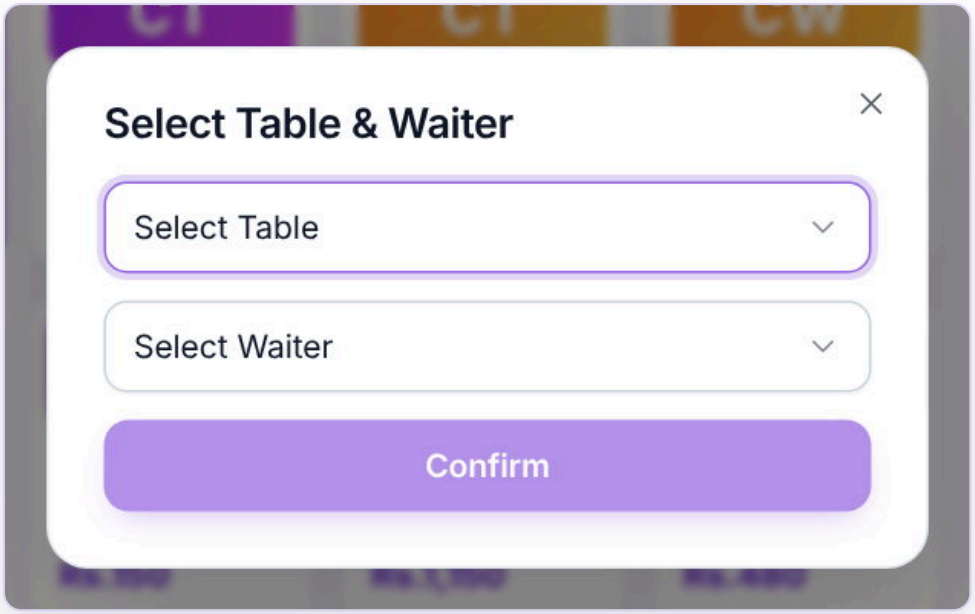

1. Tap the weight item (here *Mutton Karahi, Rs 3,600 per kg*).
2. **By weight (kg):** tap a preset (0.25, 0.5, 1, 1.5, 2, 5 kg) or type the weight. Switch the unit to **gram** or **pao** if you prefer.
3. **By amount (Rs.):** type the amount, e.g. Rs 500 — the bill line is exactly Rs 500 and the weight it buys is shown.
4. Press **Add to cart** or `Enter`. `Esc` closes the panel.

With a scale connected to the PC, **Connect scale · F9** reads the weight straight into the panel.

Status. Reading a scale over a COM port needs the Windows desktop app. The presets and the panel itself can be switched off in **Settings → General → Weight items**.

POS

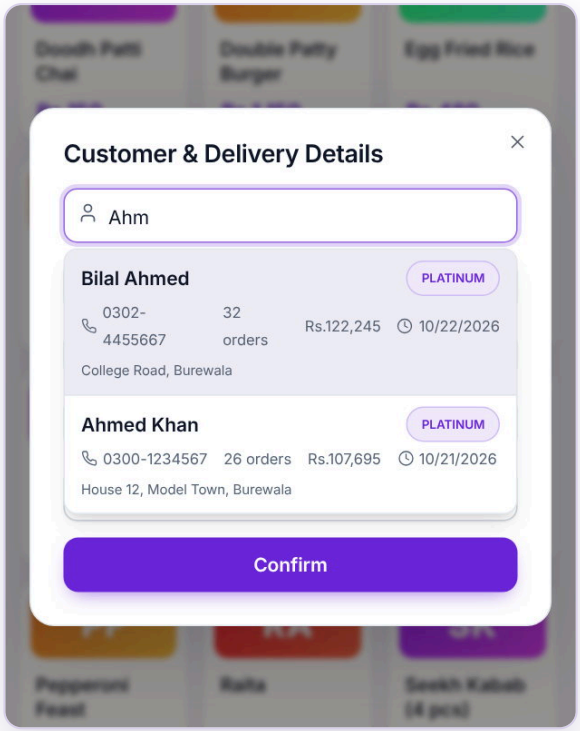

4.6 Dine-in table and delivery details

Select Table & Waiter

Asked the first time a dine-in order is saved. The list shows the tables that are free. The waiter is optional. The table is then marked **Running** on the Tables screen (5.1).

Starting the order from **Tables** skips this question — the table is already chosen.

Customer & Delivery Details — with suggestions.

Type a few letters of the name or phone: saved customers are suggested with their order count, spend and grade. Picking one fills the phone and address. New customers are saved automatically with the order.

POS

4.7 Discounts, promo codes, service charge and tax

How the total is worked out, and who may change each part.

Discount

Tap a preset (**−5%**, **−10%**, **−15%**, **−100**, **−200**) or type an amount with **Rs** or **%** selected. The presets are set in **Settings → General → Quick Discount**.

A percentage discount prints with its rate, e.g. *Discount (10%) 285*. Categories can be excluded from discounts.

If **Cashier discount requires approval** is on, cashiers cannot discount; the bill goes to the Bill Editor for an admin (10.2).

Event discount

An automatic discount for every bill — for example during Ramadan — set in **Settings → General**. It applies before manual discounts and promo codes; together they can never exceed the bill.

Promo code

Type the code (e.g. `WELCOME10`) and press **Apply**. The code's dates, minimum order and usage limit are checked (13.5).

Service charge

Added automatically for the order types switched on in **Settings → General → Service charge** — as a percentage or a fixed amount. It is worked out after any discount.

With **Allow adding or editing it on a bill** on, **+ Add** beside Service lets the cashier add, change or remove it for one bill.

Tax (GST / VAT)

Set **GST / VAT %** in **Settings → General**. *Exclusive* adds it on top of the total; *inclusive* shows it inside the price. Service charge is added first, then tax. 0 switches tax off.

Delivery charge and rounding

A flat delivery charge is added to delivery orders. Cash rounding (optional) rounds the total to the nearest note and prints the adjustment.

Example

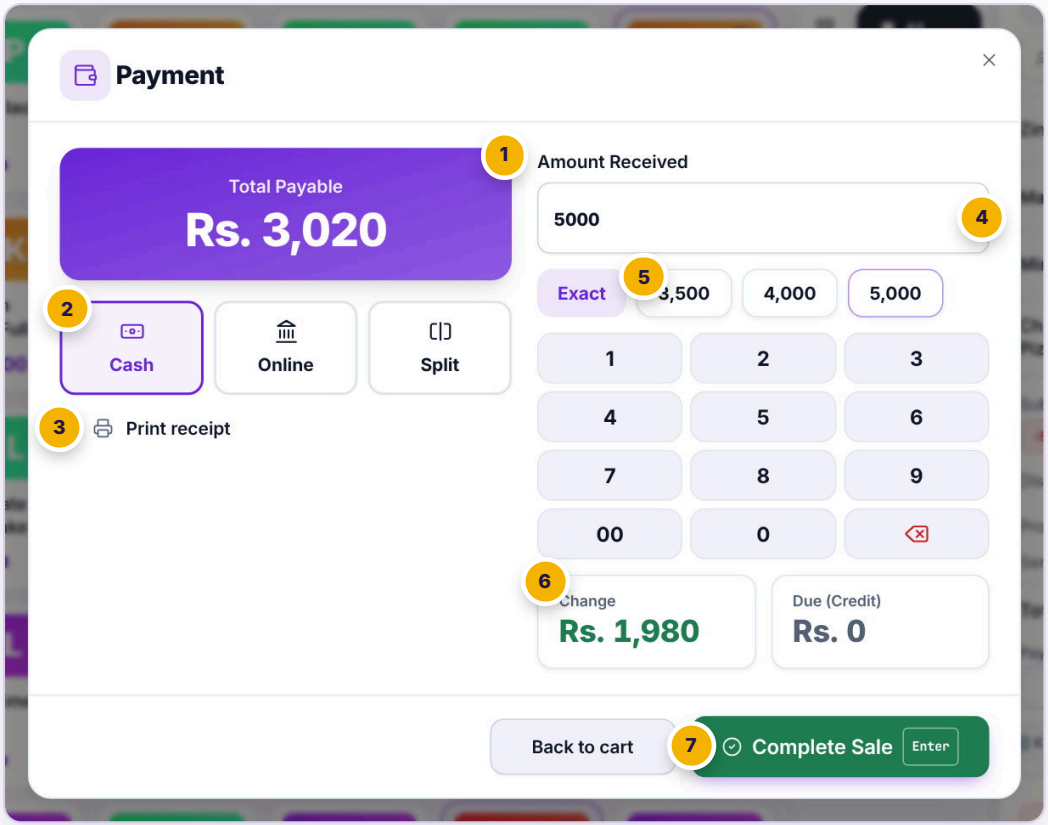

Items 2,850 − 10% discount (285) = 2,565
+ 10% service charge (257)
= Total 2,822

Every part prints on the receipt only when it is used.

POS

4.8 Taking payment

The payment screen opens on PAY. Enter what the customer gives you; the change and any amount still due are shown at once.

1. **Total Payable** — the bill total.
2. **Method** — **Cash**, **Online** (bank / JazzCash / Easypaisa account), **Split** (part cash, part online) or **Other** types you add.
3. **Print receipt** — untick to skip the receipt for this one bill.
4. **Amount Received** — type it or use the keypad.
5. **Exact** and the next round notes — one tap fills the amount.
6. **Change** and **Due (Credit)** — what to give back, or what is still owed.
7. **Complete Sale** (`Enter`) — saves the payment and prints.

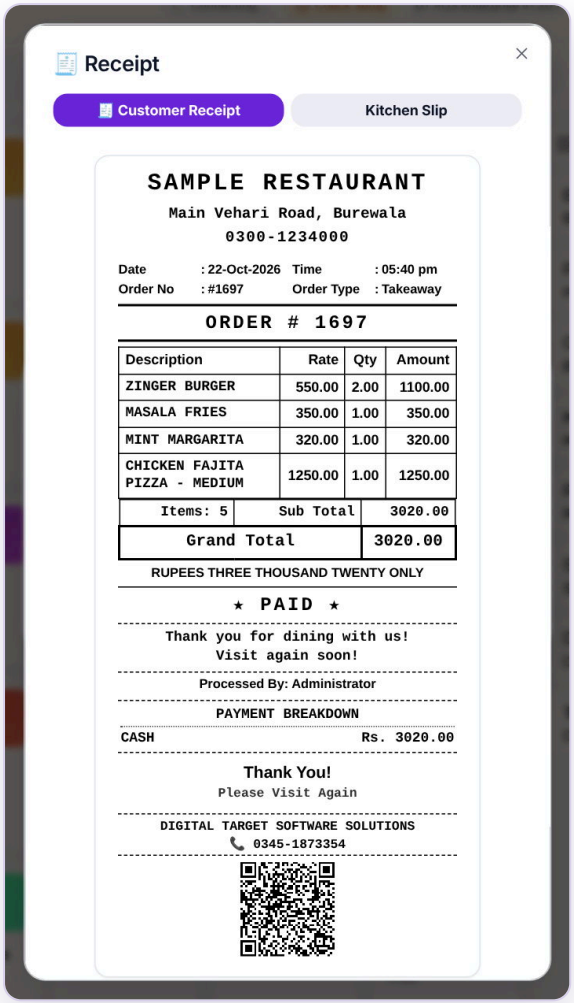

Paying **less** than the total makes a **partial payment**: the button reads *Partial Pay · Rs. 1,000 (Due Rs. 1,140)*. The rest is collected later from **Pending Payments** (6.2).

Online and Split need at least one payment account (14.2).
Back to cart returns to the bill.

> Prefer the earlier compact popup? Choose **Classic** in **Settings → General → Payment screen**.

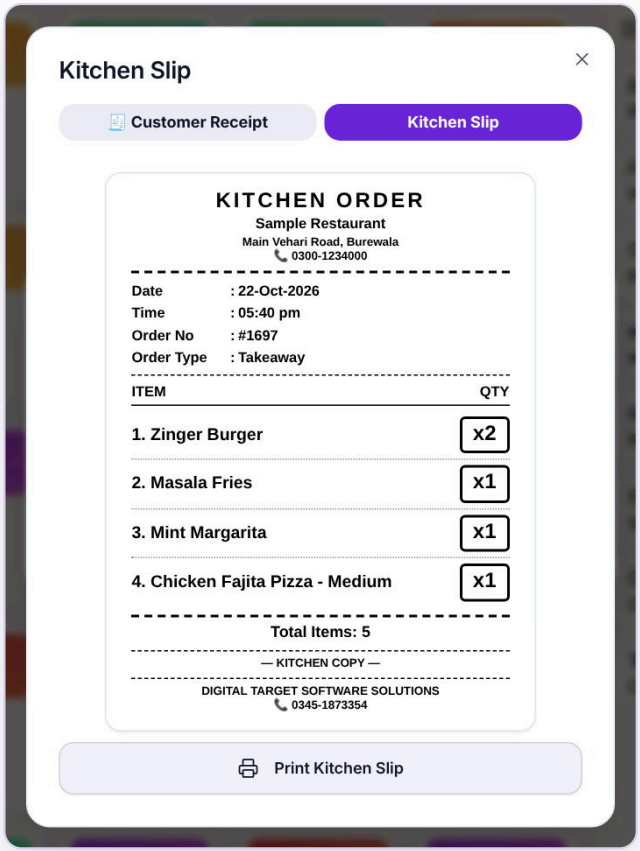

POS

4.9 The receipt and the kitchen slip

Customer receipt after payment (on-screen preview).

The receipt shows the restaurant header, items with rates, totals, the amount in words, the payment breakdown and a QR code. The design is chosen in **Printers → Receipt design** (19.5).

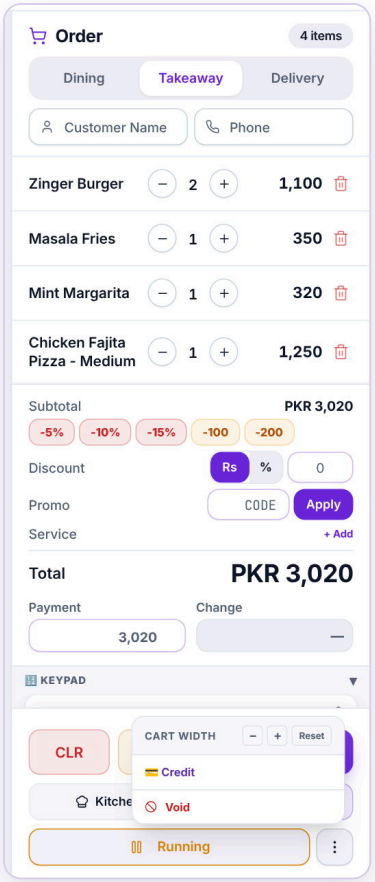

Kitchen slip (KOT) — what the cook sees.

The KOT prints when an order is saved as running (or paid). It lists items and quantities in large type, without prices. When a running bill is updated, the next KOT lists only the changes.

Whether the receipt and KOT print, and on which printer, is set in **Settings → KOT Settings** (18.9).

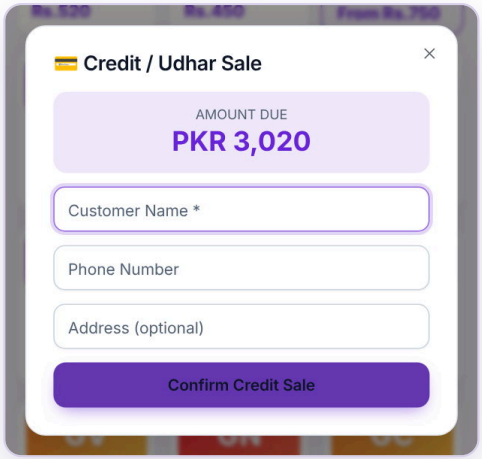

POS

4.10 More actions: credit, void and manual items

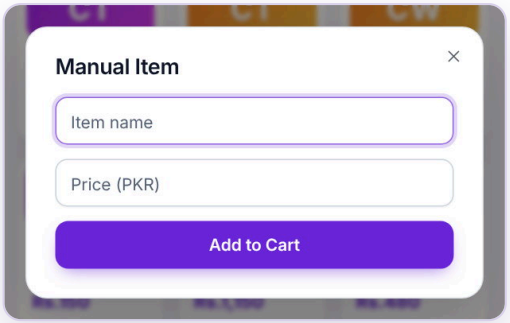

More actions (⋮ beside Running).

- 💳 **Credit** — saves the bill on credit (udhaar) for a named customer.
- **Void** — voids the bill, with a reason; it moves to Void / Comp / Cancel.
- **✕ Cancel Edit** — leaves an edited bill unchanged.
- **Cart width** — narrower or wider bill panel.

Credit (udhaar) — name, phone and address.

The bill is saved as **credit pending** and appears in **Credits** and the customer's ledger until it is paid (chapter 9).

Manual item — the Manual button.

Adds a one-off item with any name and price, for example a special request. It prints and reports like any other line.

POS

4.11 Keyboard shortcuts at the POS

Experienced cashiers bill without touching the mouse. The shortcuts are also listed at the foot of the bill panel.

KEY	WHAT IT DOES
`F1` · `Ctrl` + `K`	Jump to the item search box
`F2`	Hold the current order (unpaid)
`F3`	Save as Running (or Update an open bill)
`F4`	Open the payment screen
`Enter`	Apply the keypad value; with nothing typed, open the payment screen
`+`	Pay in cash at once and print (instant paid bill)
`F8`	Show the last bill again to reprint it
`Esc`	Clear the keypad / close the weight panel
`F9`	Read the weighing scale (weight items, desktop app)

In the payment screen

- Type the amount, then `Enter` to complete the sale.
- `Esc` returns to the cart.

In the weight panel

- Digits and `.` type the weight or amount; `Backspace` deletes.
- `Enter` or `+` adds to the cart; `Esc` closes.

On the PIN sign-in

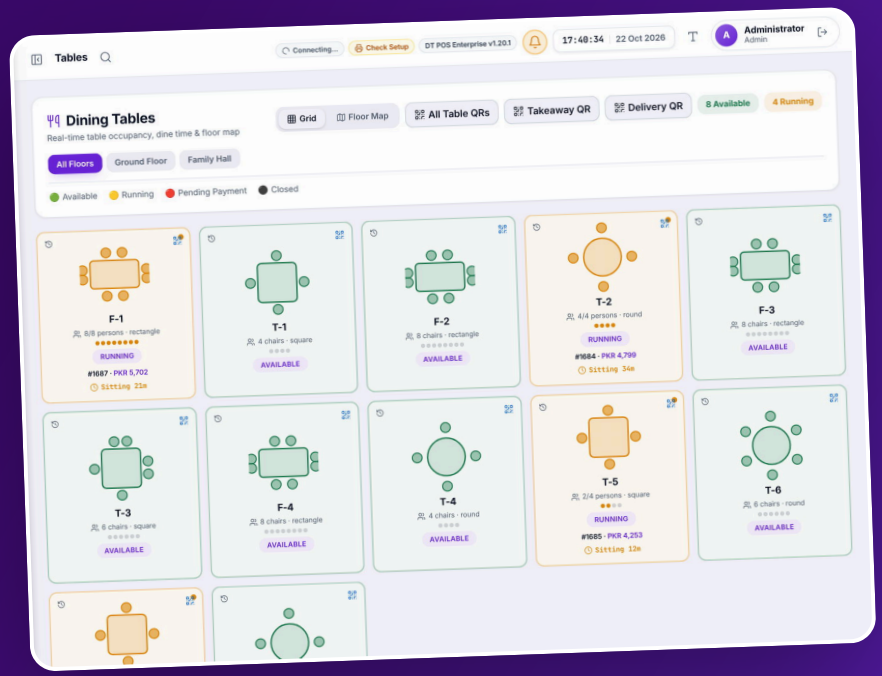

- Digits type the PIN; `Backspace` deletes; `Esc` clears.

05

Tables and dine-in

The dining room at a glance: which tables are free, which are eating, how long they have been seated, and every action for a table bill.

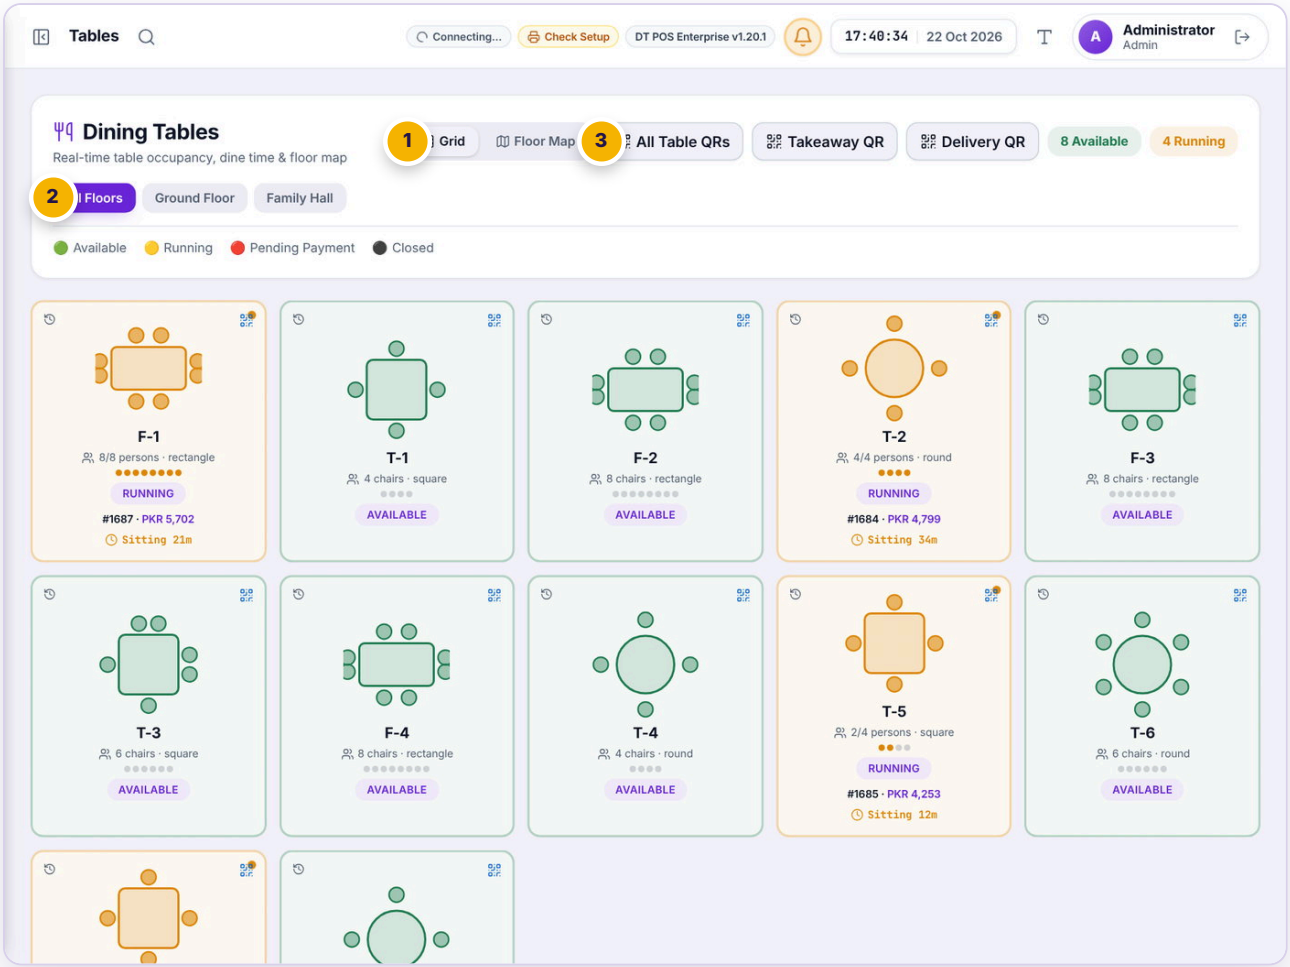

The tables screen	36	Working with a table	38
The floor map	37	Table QR codes	39

TABLES

5.1 The tables screen

Each table is a card in the colour of its state. Running tables show the bill number, the amount so far and how long the guests have been seated.

1. **Grid** or **Floor Map** view.
2. **Floors** — all floors, or one floor / section (e.g. Ground Floor, Family Hall).
3. **QR codes** — all table QRs, and the Takeaway / Delivery QR (5.4).

COLOURS

- **Available** — free, ready to seat.
- **Running** — an order is open.
- **Pending Payment** — bill asked for, waiting to pay.
- **Closed** — not in use today.

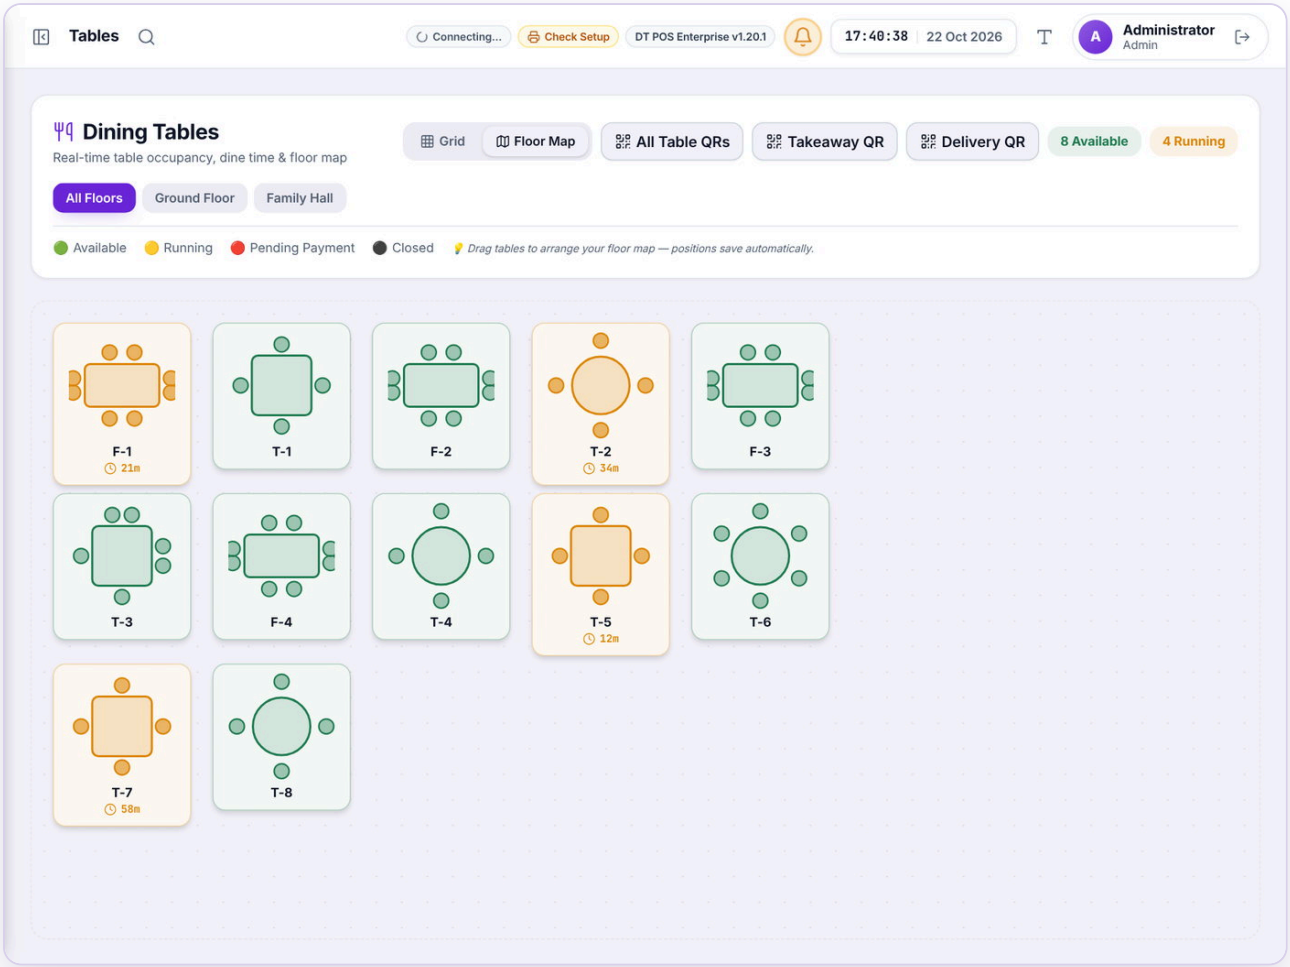

The counters at the top right show how many tables are available and running. Click a table to open its actions (5.3).

Tables, floors, seats and shapes are set up in **Settings → Tables** (18.5).

TABLES

5.2 The floor map

The same tables drawn as your room. Drag a table to where it stands — the layout is saved automatically.

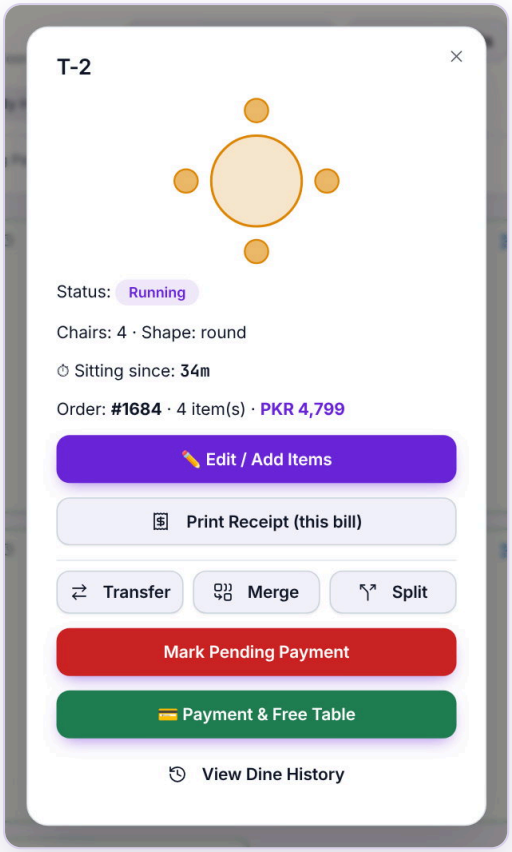

1. Press **Floor Map**.
2. Choose a floor if you have more than one.
3. Drag each table into place. Positions save as you go.

Running tables show the minutes since the guests sat down, so a waiter can see at a glance which table has waited longest.

Tip. Square, round and rectangle shapes and the number of chairs come from **Settings → Tables**; they help staff recognise the table on the map.

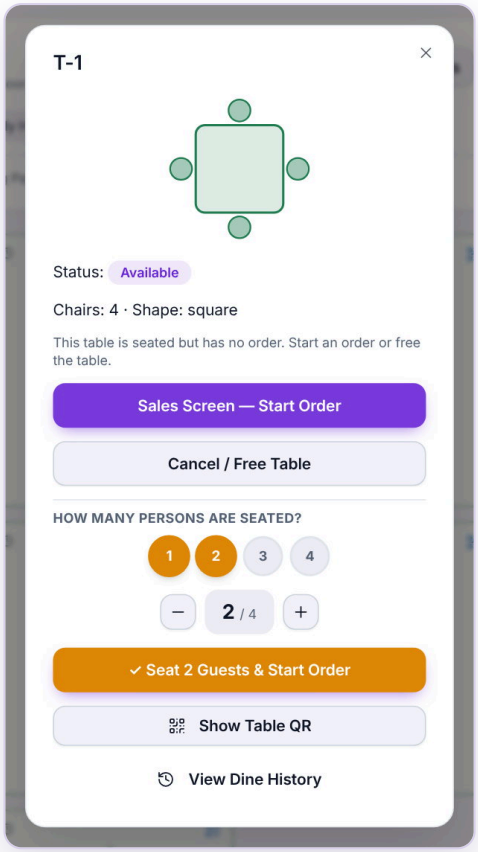

TABLES

5.3 Working with a table

A running table — T-2 with order #1684.

- **Edit / Add Items** — opens the bill on the POS. Press Update to send the new items to the kitchen.
- **Print Receipt (this bill)** — a bill for the guests before they pay.
- **Transfer** — move the bill to a free table. **Merge** — combine with another running table. **Split** — move chosen items to a new bill.
- **Mark Pending Payment** — the table turns red until paid.
- **Payment & Free Table** — pay and free the table in one step.

A free table — seat guests and start.

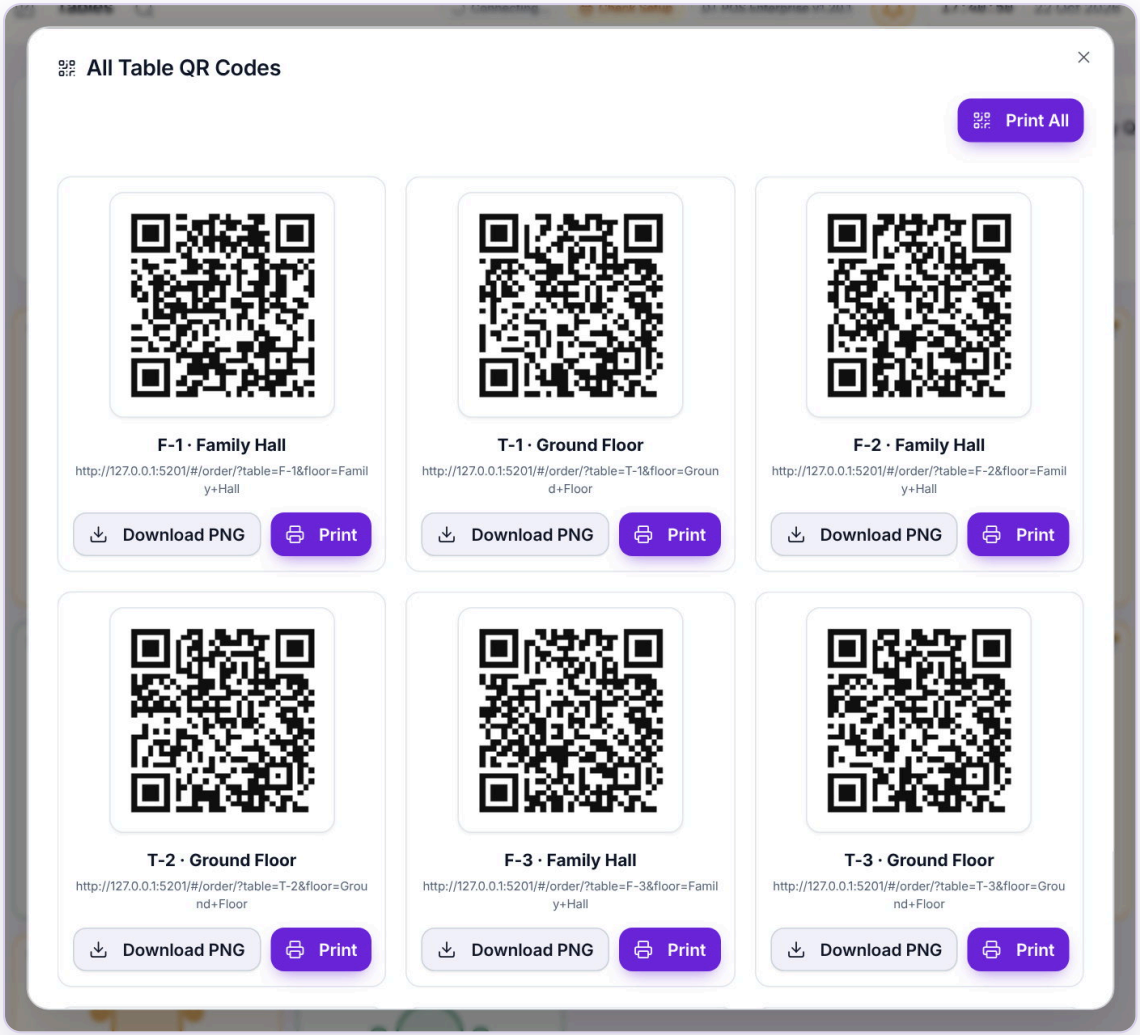

1. Pick how many persons are seated (or use − / +).
2. Press Seat ... Guests & Start Order. The POS opens with the table chosen.

View Dine History lists past sittings at the table with their duration. **Cancel / Free Table** frees a table that was seated by mistake.

TABLES

5.4 Table QR codes

A printable QR code for every table, and one each for takeaway and home delivery.

Press **All Table QRs** on the Tables screen. Each code can be downloaded as a PNG or printed; **Print All** prints the whole set for table stands.

The code carries the table and floor name, so an order placed from it arrives already linked to the table.

Status — Offline Edition. The QR codes open the online ordering page. In the Offline Edition that page is not published on the internet, so customers' phones cannot open it. Use the QR codes only with the online edition from Digital Target.

06

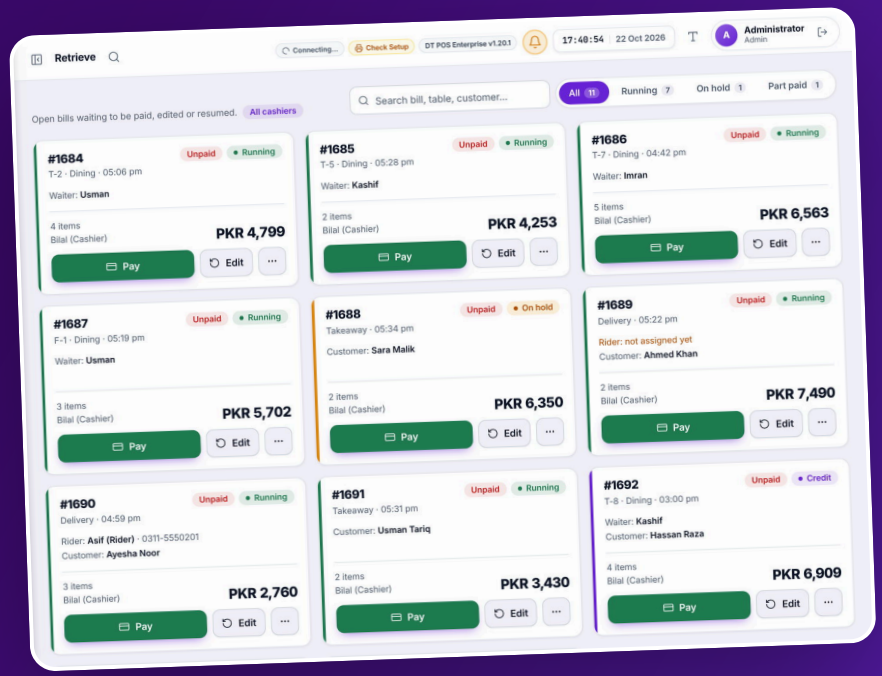

Open bills and reprints

Finding a bill that is still open, collecting the rest of a part-paid bill, and reprinting old bills safely.

Retrieve — open bills 41

Pending payments — part-paid bills 42

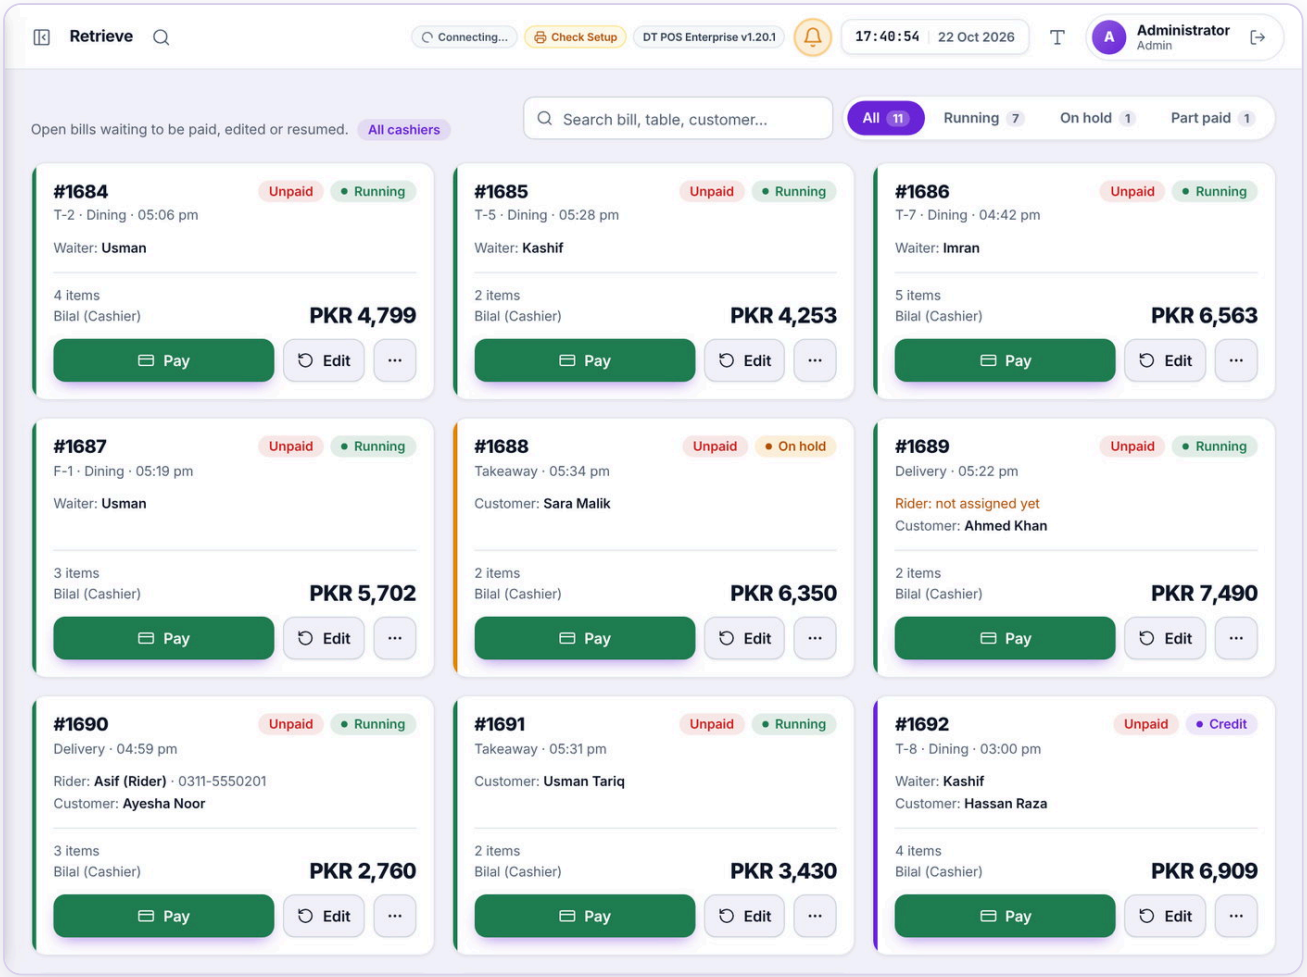

Bill reprint (read-only) 43

RETRIEVE

6.1 Retrieve — open bills

Every bill that is not yet paid: running tables, held orders, deliveries and part-paid bills — with Pay and Edit on each card.

1. Filter with **All**, **Running**, **On hold** or **Part paid**, or search by bill number, table or customer.
2. **Pay** opens the payment screen for that bill.
3. **Edit** opens it on the POS to add or change items.
4. **⋯** holds more: view, edit history, reprint the KOT (or send it to the kitchen), tandoor token, hold / resume and cancel.

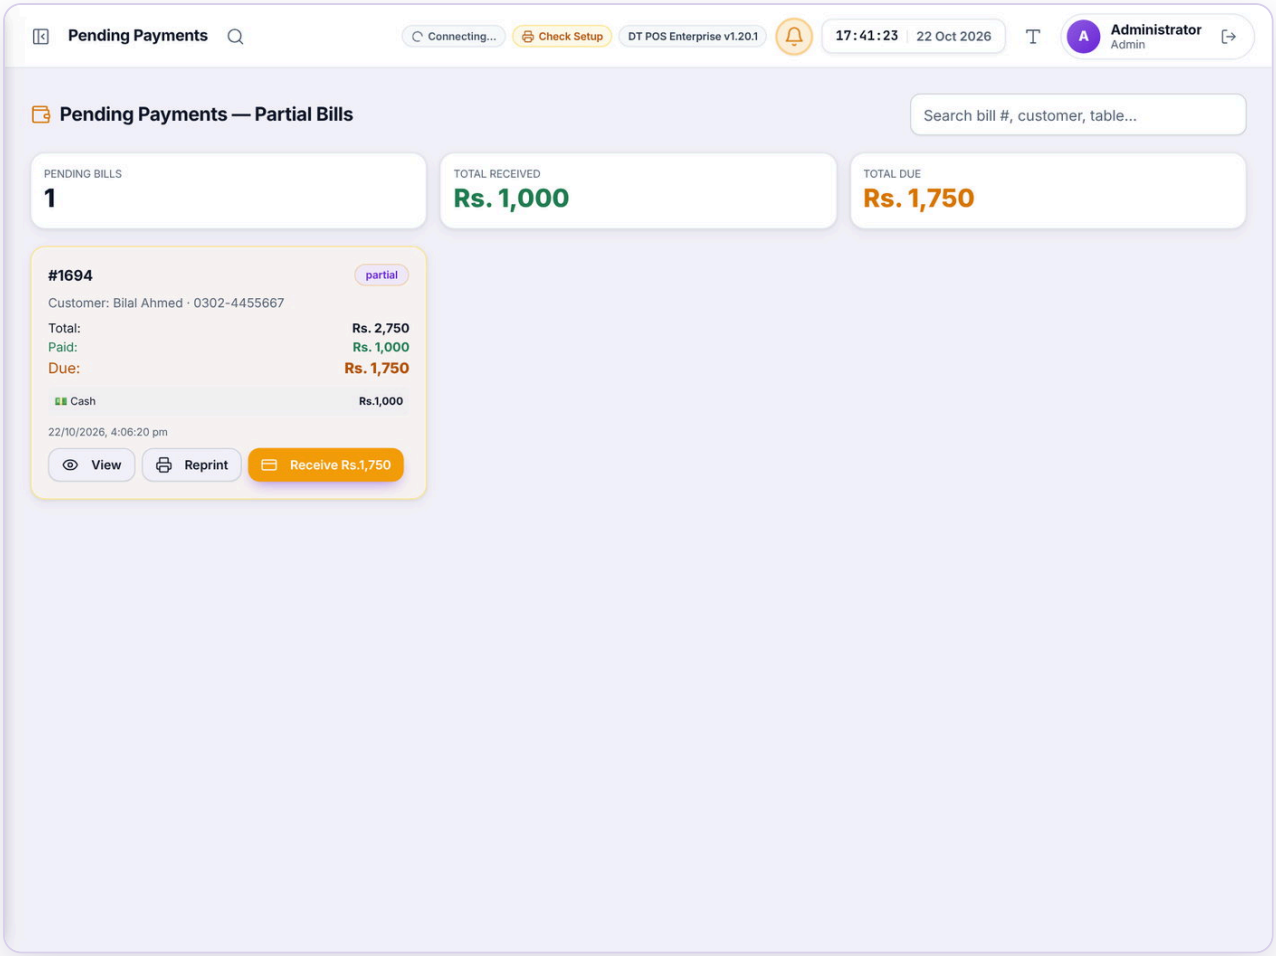

Each card shows the table and waiter, or the customer and rider, the number of items, the cashier and the amount.

An administrator sees every cashier's bills (*All cashiers*); a cashier signed in sees *their own bills*.

PAYMENTS

6.2 Pending payments — part-paid bills

Bills where the customer paid only part of the total. The rest is collected here.

The top cards show how many bills are waiting, how much was received and how much is still due.

1. Find the bill (search by number, customer or table).
2. Press **Receive Rs ...** and take the remaining amount in cash or online.
3. The bill becomes **paid** and leaves this list.

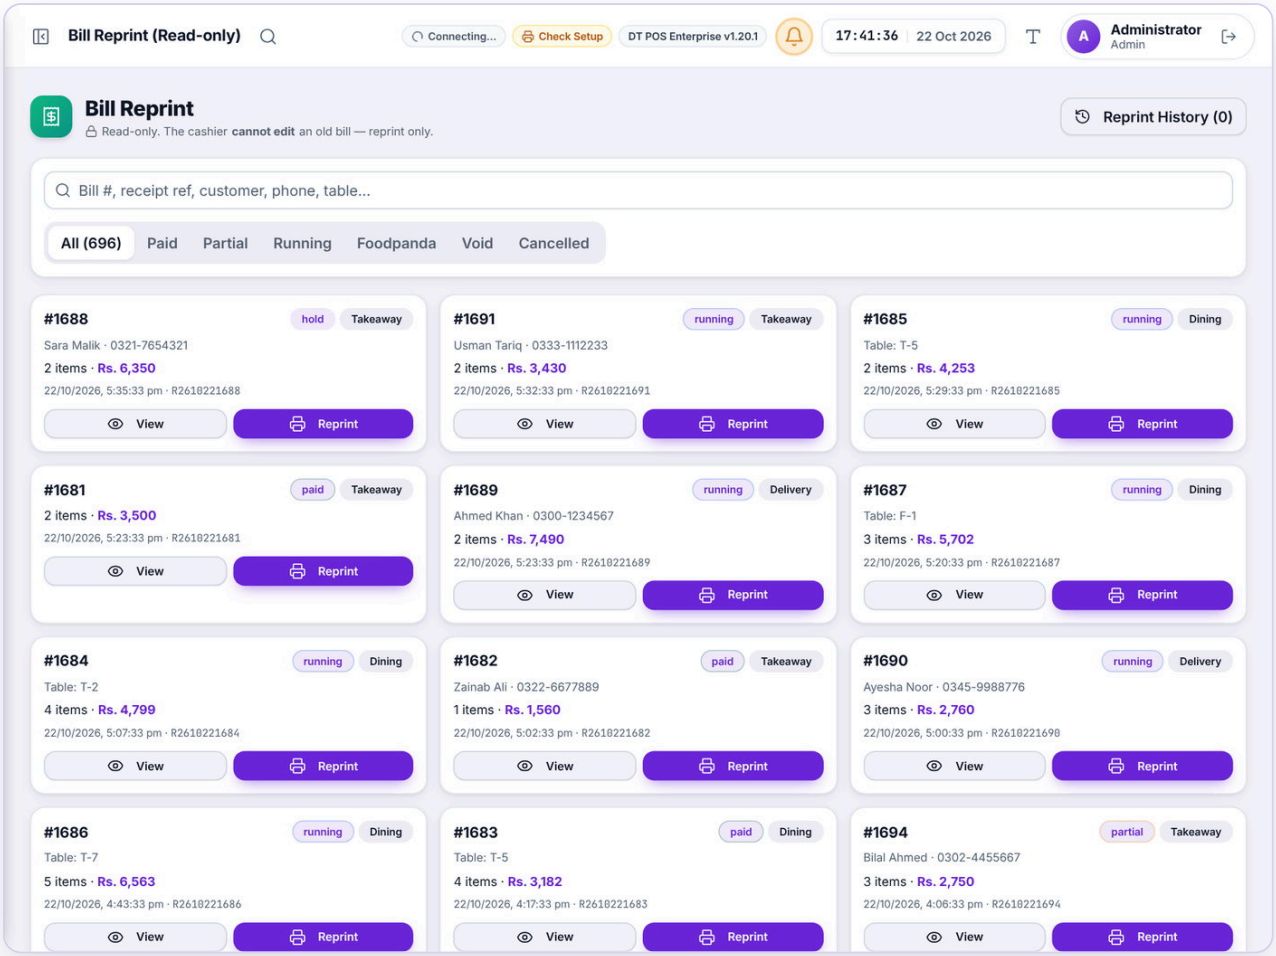

Each card lists the payments already made, with method and amount. **View** shows the bill; **Reprint** prints it again.

> Bills put on **credit (udhaar)** are kept separately, under Credits (chapter 9).

REPRINT

6.3 Bill reprint (read-only)

Find any bill and print it again — without being able to change it. Every reprint is recorded.

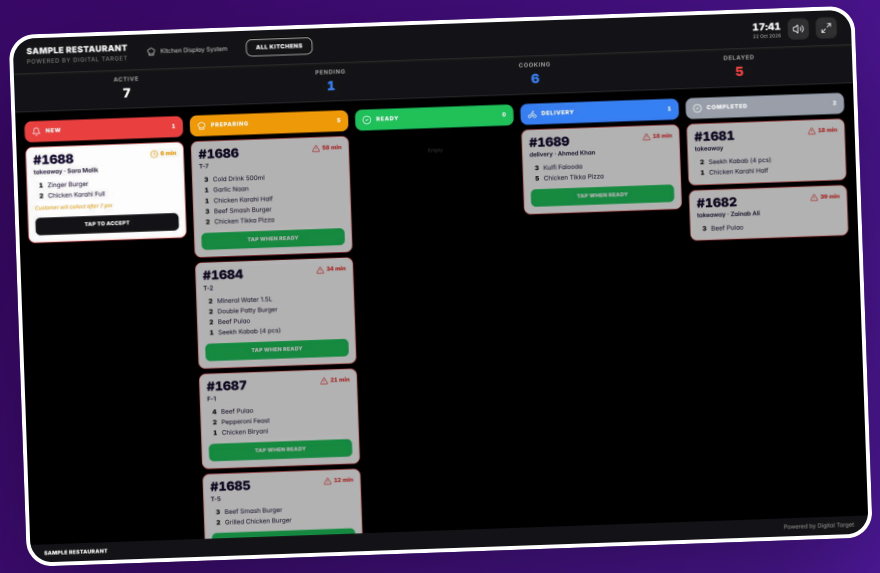

- Search by bill number, receipt reference, customer, phone or table.
- Filter by state: Paid, Partial, Running, Foodpanda, Void, Cancelled.
- **View** shows the bill; **Reprint** prints it.
- **Reprint History** lists who reprinted which bill and when.

Why read-only? A cashier can give a customer a copy of an old bill but cannot alter it. Changes are made only in the Bill Editor by a manager or admin (10.2), where they are logged.

07

Kitchen and customer displays

Screens for the kitchen and for the customer: live tickets with timers, a TV board for the cooks, and an order-status screen for the counter.

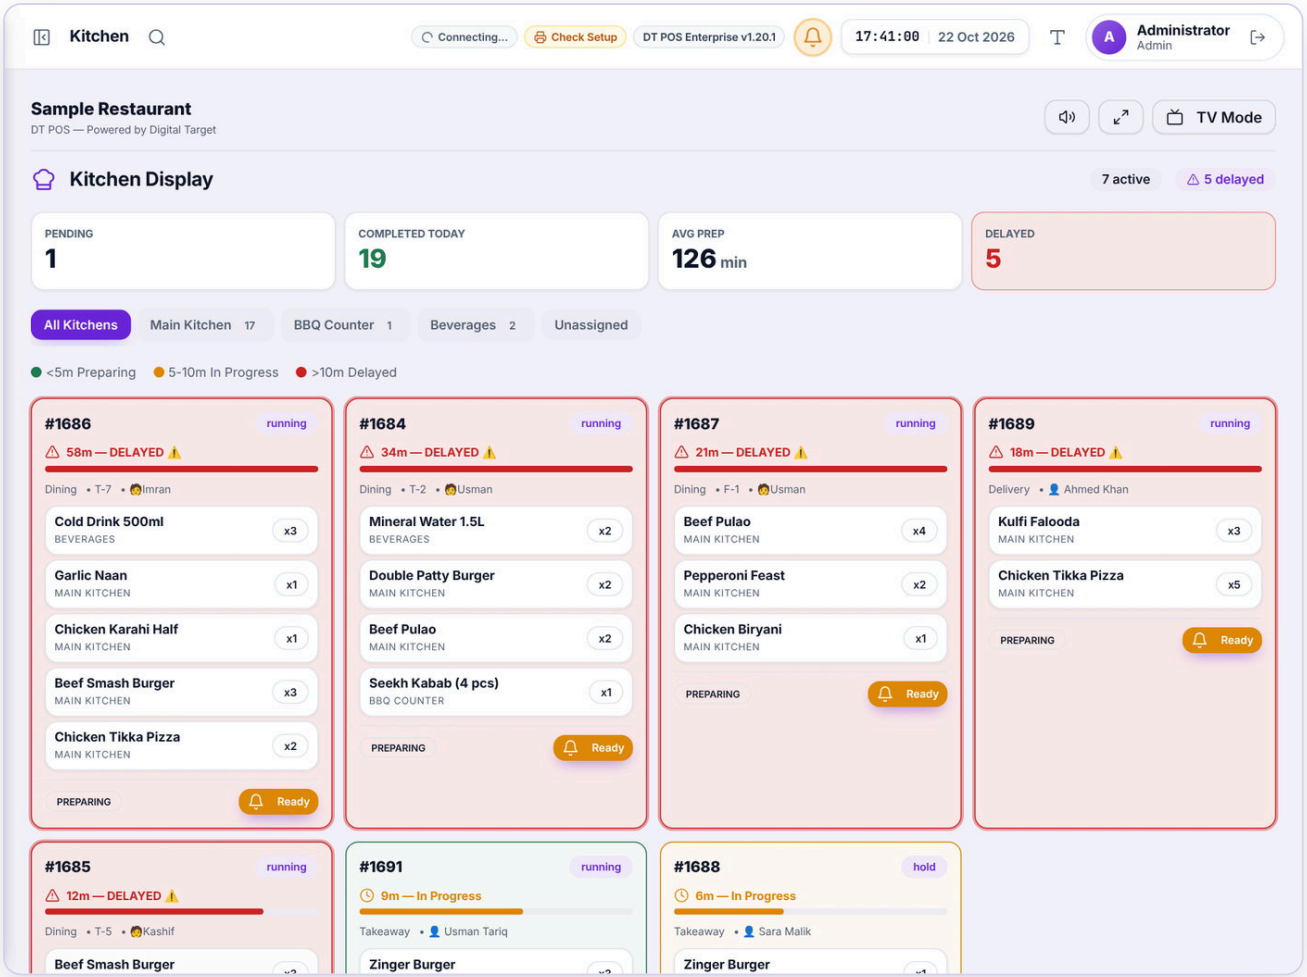

Kitchen display	45	The kitchen TV board	47
TV Mode and display settings	46	Customer display	48

KITCHEN

7.1 Kitchen display

Every order sent to the kitchen, as a ticket with a running timer. Cooks mark items ready; delays turn red.

- **Counters**: pending tickets, completed today, average preparation time and delayed tickets.
- **Kitchens**: show all kitchens, or one station (Main Kitchen, BBQ Counter, Beverages…).
- **Timer colours**: under 5 minutes *preparing*, 5–10 minutes *in progress*, over 10 minutes *delayed*.
- **Ready** on a ticket marks it ready; the counter is told.

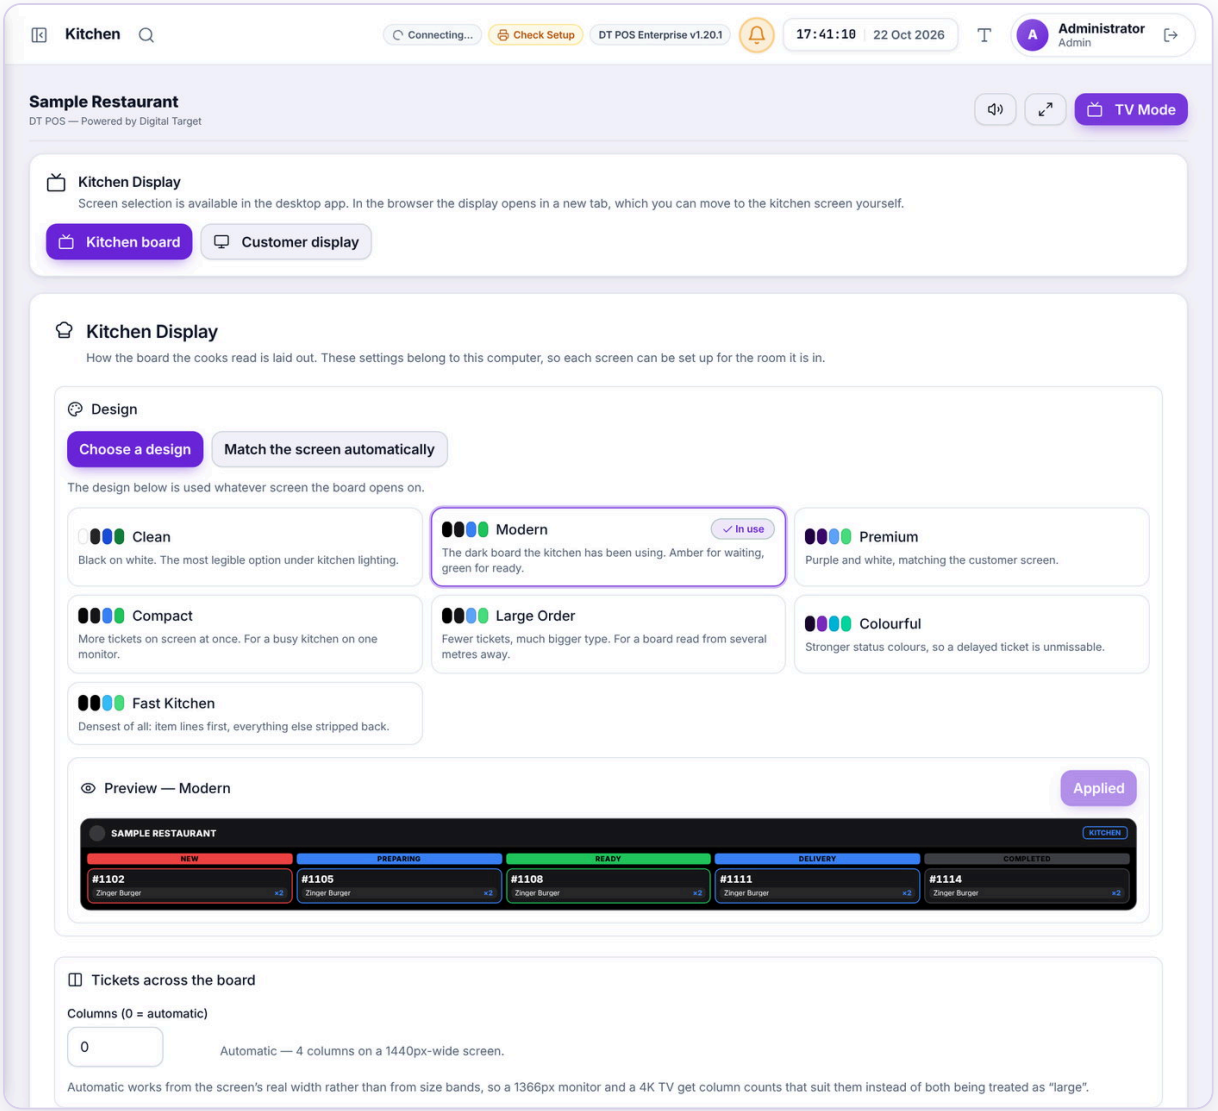

The speaker button turns sound alerts on or off; the expand button goes full screen.

The minutes for the colours are set in **Settings → KOT Settings**. Which kitchen prepares each item is set on the item in the Menu (11.2).

KITCHEN

7.2 TV Mode and display settings

TV Mode chooses what the kitchen screen shows and opens it on a second monitor or TV.

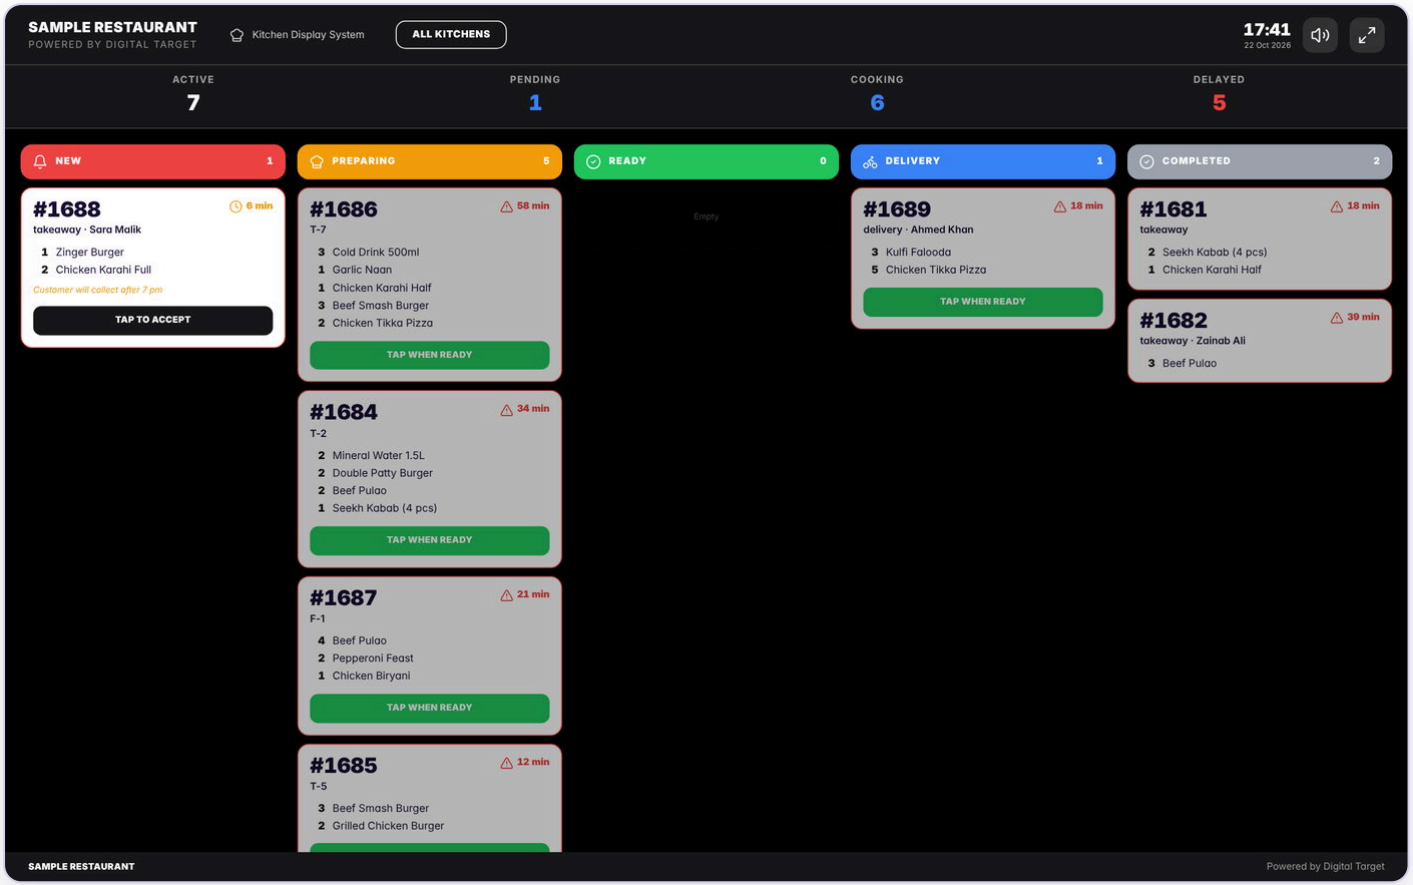

1. On the Kitchen screen press **TV Mode**.
2. Choose **Kitchen board** (for the cooks) or **Customer display** (for the counter).
3. Pick a **design** — Clean, Modern, Premium, Compact, Large Order, Colourful or Fast Kitchen — or **Match the screen automatically**. The preview shows the result.
4. Set how many ticket columns fit across the board (0 = automatic).

Status. Choosing which monitor the board opens on needs the Windows desktop app. In a browser the display opens in a new tab that you move to the screen yourself.

KITCHEN

7.3 The kitchen TV board

A full-screen board for the kitchen wall, readable from across the room.

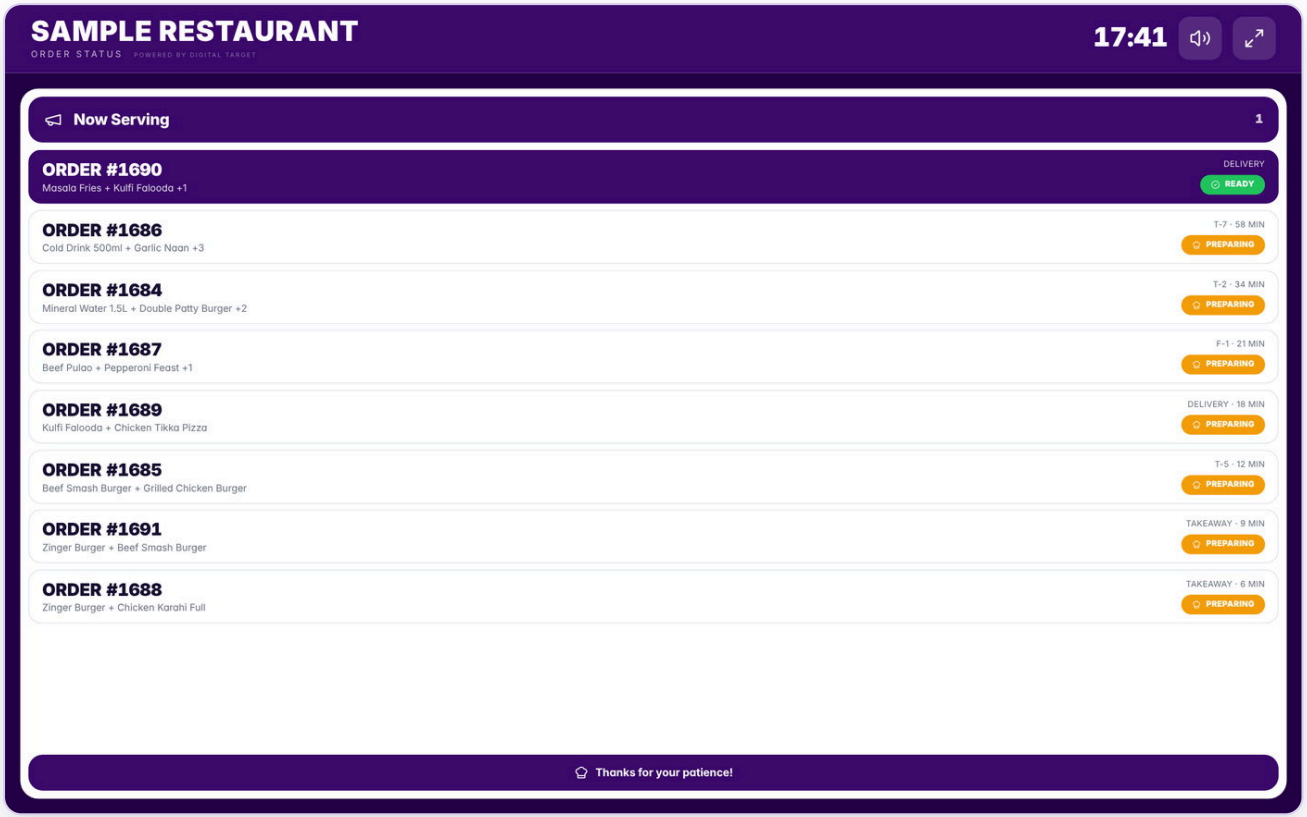

Tickets move through the columns **New → Preparing → Ready**, with separate **Delivery** and **Completed** columns. Cooks tap **Tap to accept** and **Tap when ready** on a touch screen. The top line counts active, pending, cooking and delayed tickets.

DISPLAYS

7.4 Customer display

An order-status screen for customers waiting at the counter, on a second monitor or TV.

- **Now Serving** — orders that are ready, highlighted.
- Below — every open order with its type, table and status (Preparing, Ready).
- While the cashier rings up a bill, the screen can show the customer's items and total live — no cashier, waiter or kitchen details are ever shown.

Switch it on and choose what it shows in **Settings → Display** (18.12). Promotional images can play as a slideshow when there is no order.

08

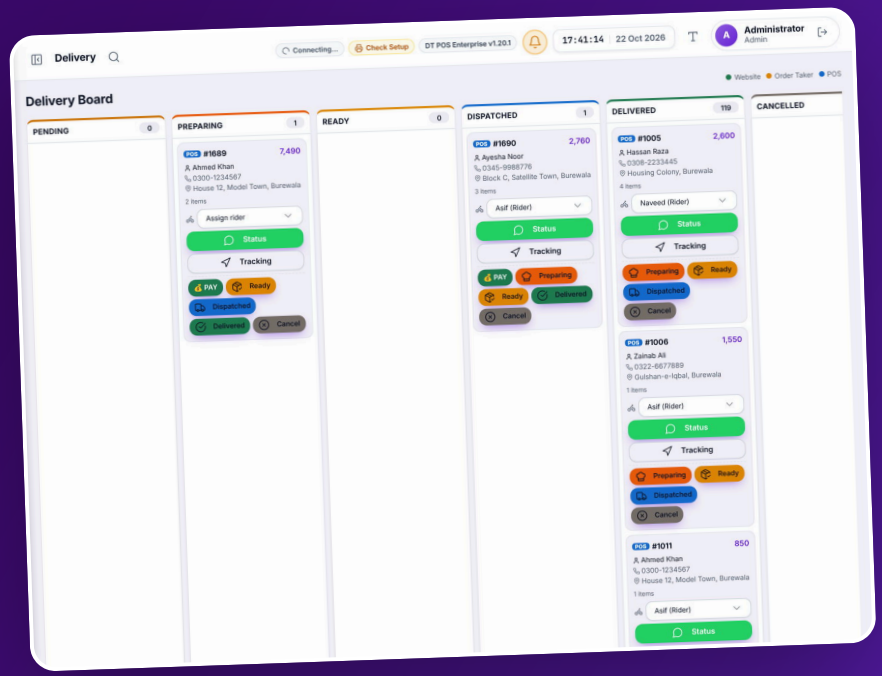

Delivery, pickup and Foodpanda

Running home deliveries from the counter, handing over self-pickup orders, and keeping Foodpanda orders apart from your own.

Delivery board 50

Pickup orders 51

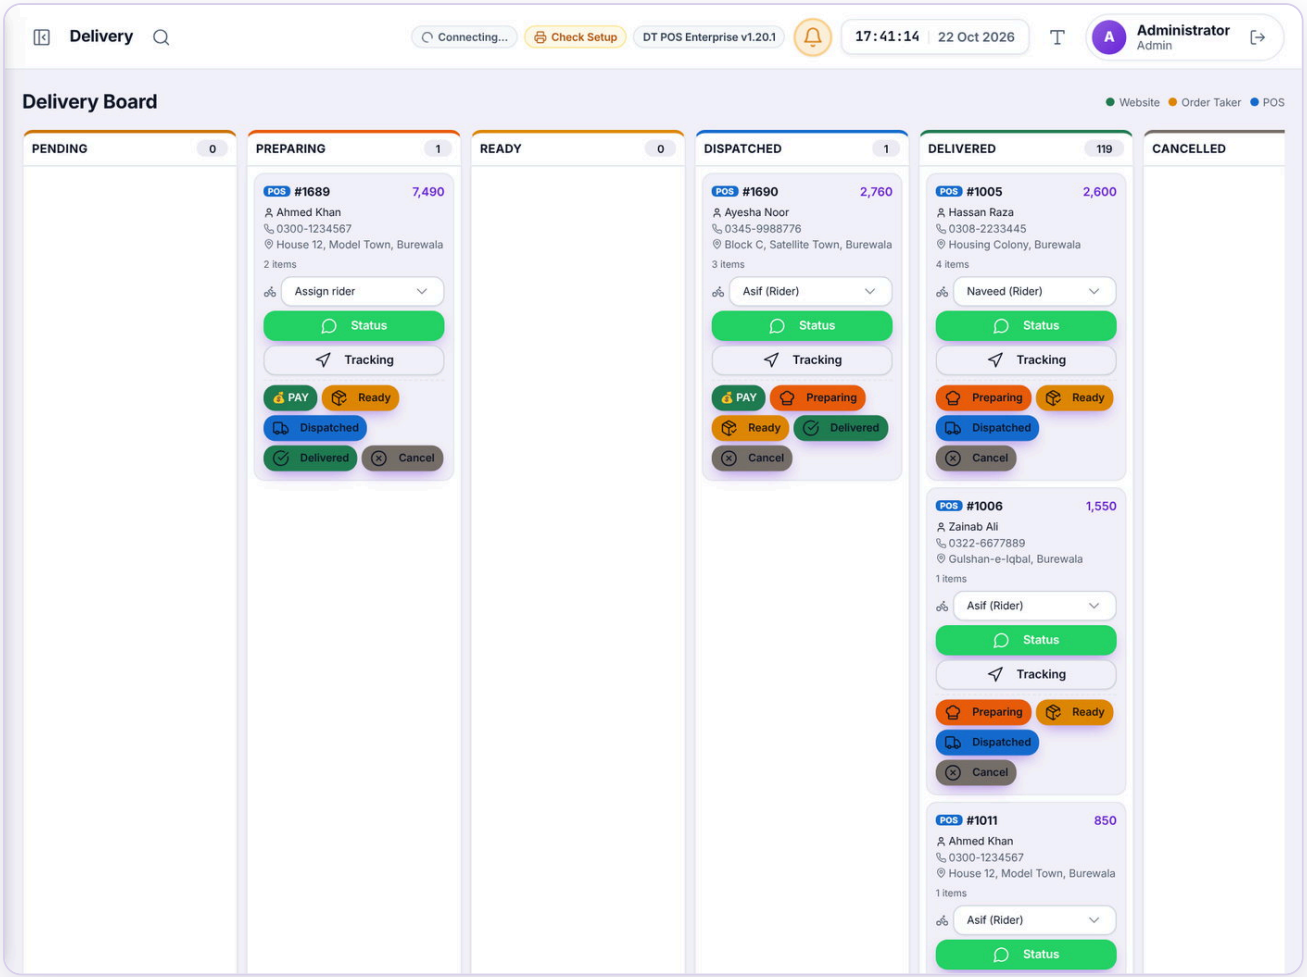

Foodpanda orders 52

DELIVERY

8.1 Delivery board

Every delivery order on one board, moving from Pending to Delivered. Assign a rider and keep the customer informed by WhatsApp.

COLUMNS

Pending → Preparing → Ready → Dispatched → Delivered, plus **Cancelled**.

ON EACH CARD

- **Assign rider** — pick from the riders list (15.3).
- **Status** — sends the customer a WhatsApp message with the order's current stage.
- **Tracking** — sends the stage, rider name and phone, and the total by WhatsApp.
- **PAY** — take payment for the order.
- **Preparing · Ready · Dispatched · Delivered · Cancel** — move the order on.

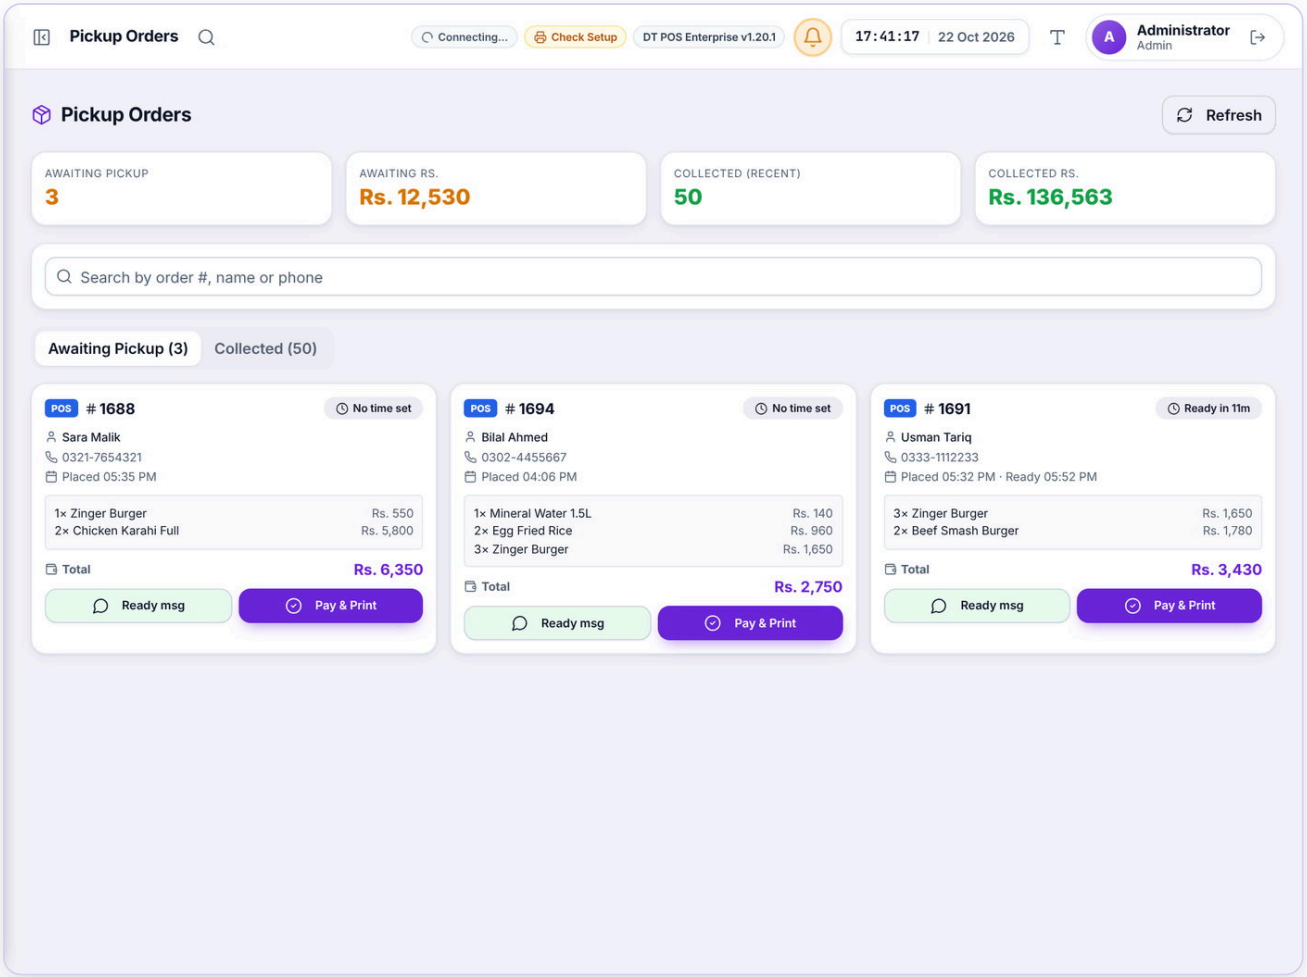

The badge shows where the order came from (POS, website or order taker).

Status. WhatsApp messages open WhatsApp Web with the text filled in; you press Send. Live rider maps belong to the online edition.

PICKUP

8.2 Pickup orders

Takeaway orders the customer will collect: what is waiting, what is ready, and the hand-over.

The counters show orders and amounts awaiting pickup, and those collected recently.

1. When the food is ready, press **Ready msg** to tell the customer by WhatsApp.
2. When the customer arrives, press **Pay & Print**. The order moves to **Collected**.

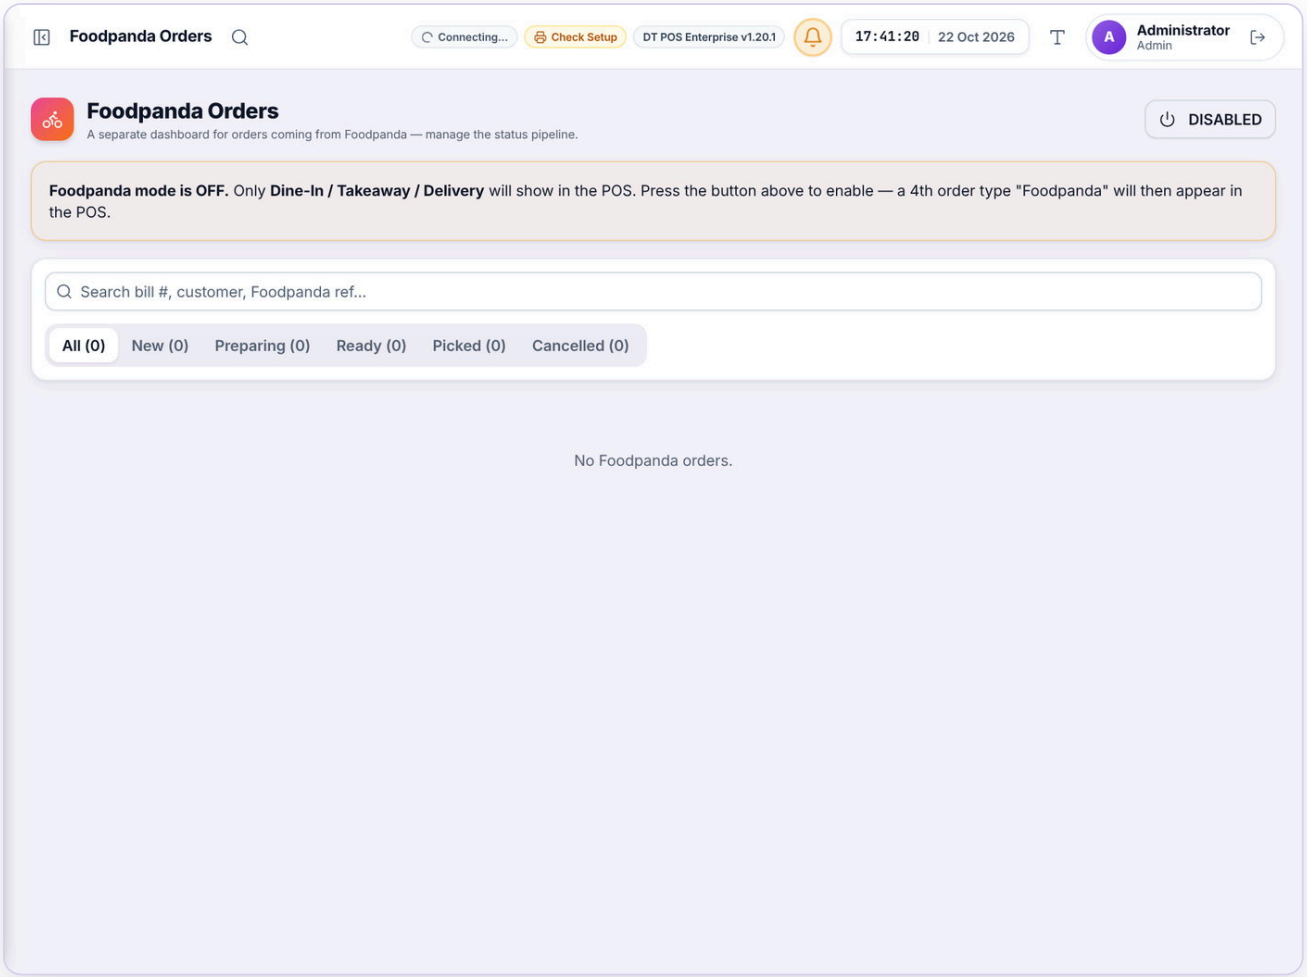

Each card shows the customer, phone, the time placed and, when a time was chosen, when it will be ready.

The ready message and the pickup time slots are set in **Settings → Self-Pickup**.

FOODPANDA

8.3 Foodpanda orders

Keeps orders that arrive through Foodpanda apart from your own, with their own status pipeline and report line.

1. Press the **DISABLED** button to enable Foodpanda mode (it then reads ENABLED). The same switch is in **Settings → Self-Pickup**.
2. A fourth order type, **Foodpanda**, appears on the POS. Ring up the Foodpanda order there.
3. Follow it here through **New → Preparing → Ready → Picked** (or Cancelled), and search by the Foodpanda reference.

Status. There is no automatic connection to Foodpanda. Orders received on the Foodpanda tablet are entered on the POS by hand; this screen then tracks them and keeps them separate in reports.

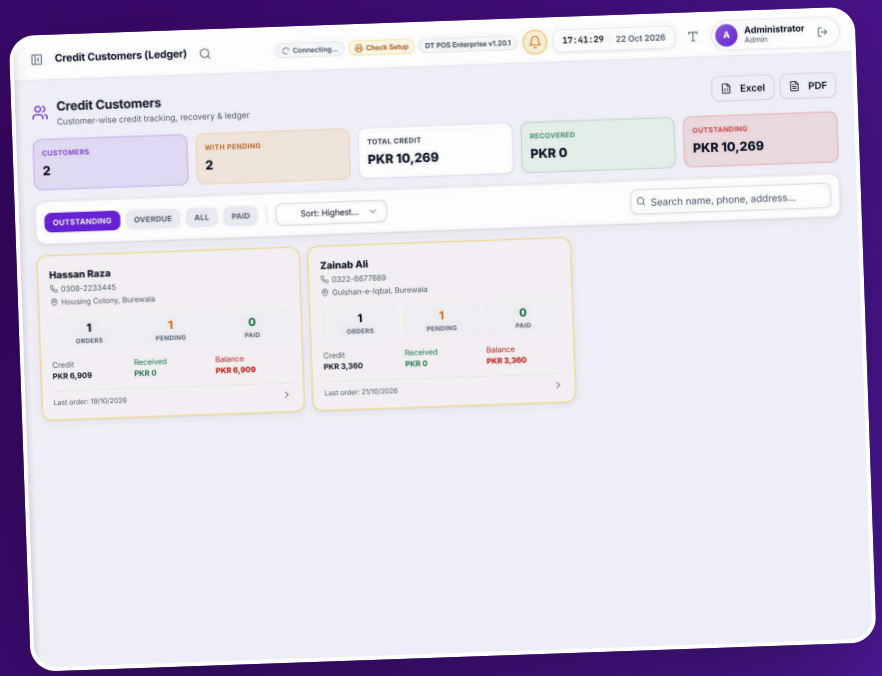

09

Credit (udhaar)

Bills given on credit to known customers, what each one owes, and recovering the money.

Credits — bills on credit 54

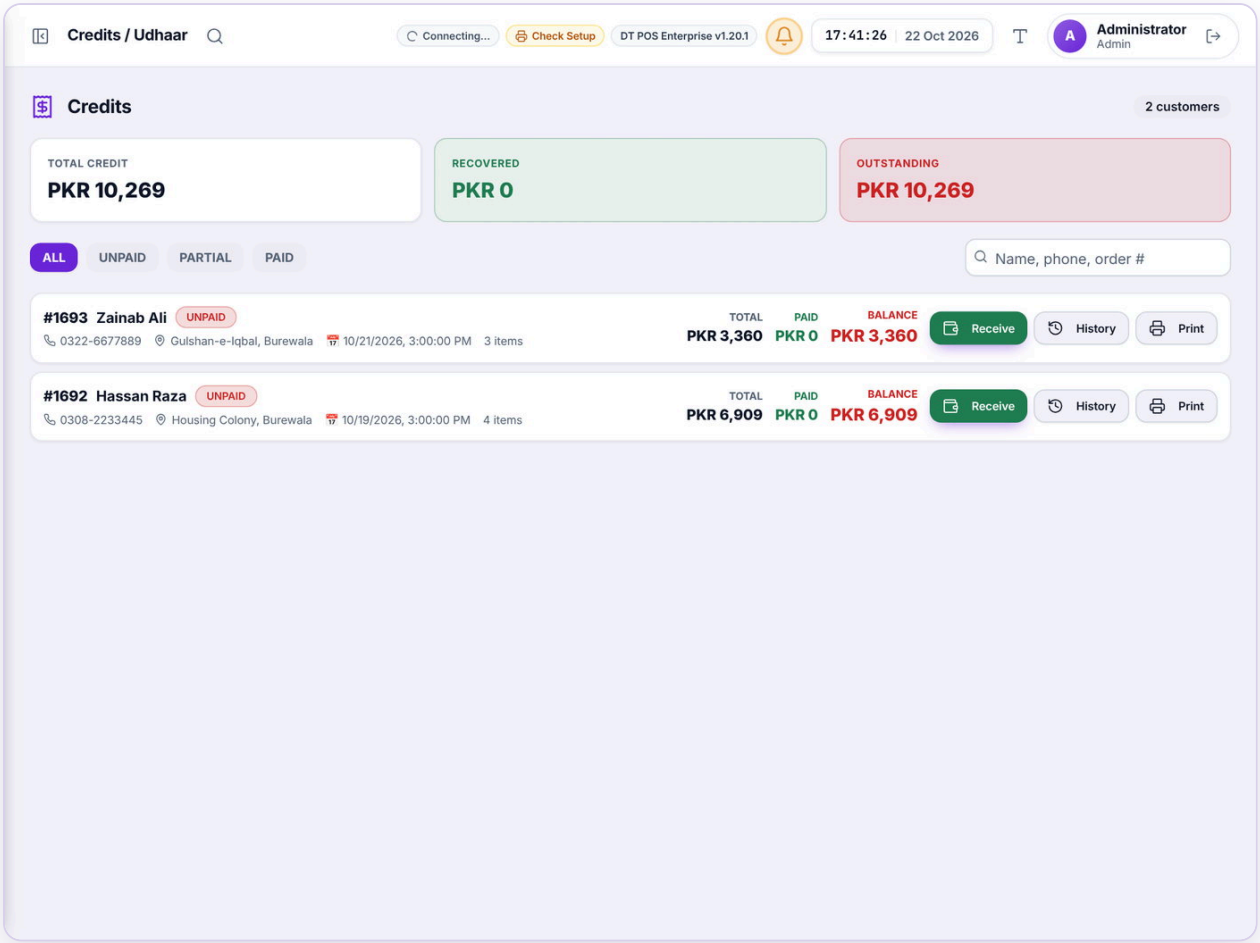

Credit customers — the ledger 55

CREDIT

9.1 Credits — bills on credit

Every bill saved on credit, with what was paid and the balance.

The top cards total the credit given, the amount recovered and what is still outstanding.

1. Filter **Unpaid**, **Partial** or **Paid**, or search by name, phone or bill number.
2. Press **Receive** to take a payment — all of it or part. The balance updates.
3. **History** shows the payments received on the bill; **Print** prints the bill with its balance.

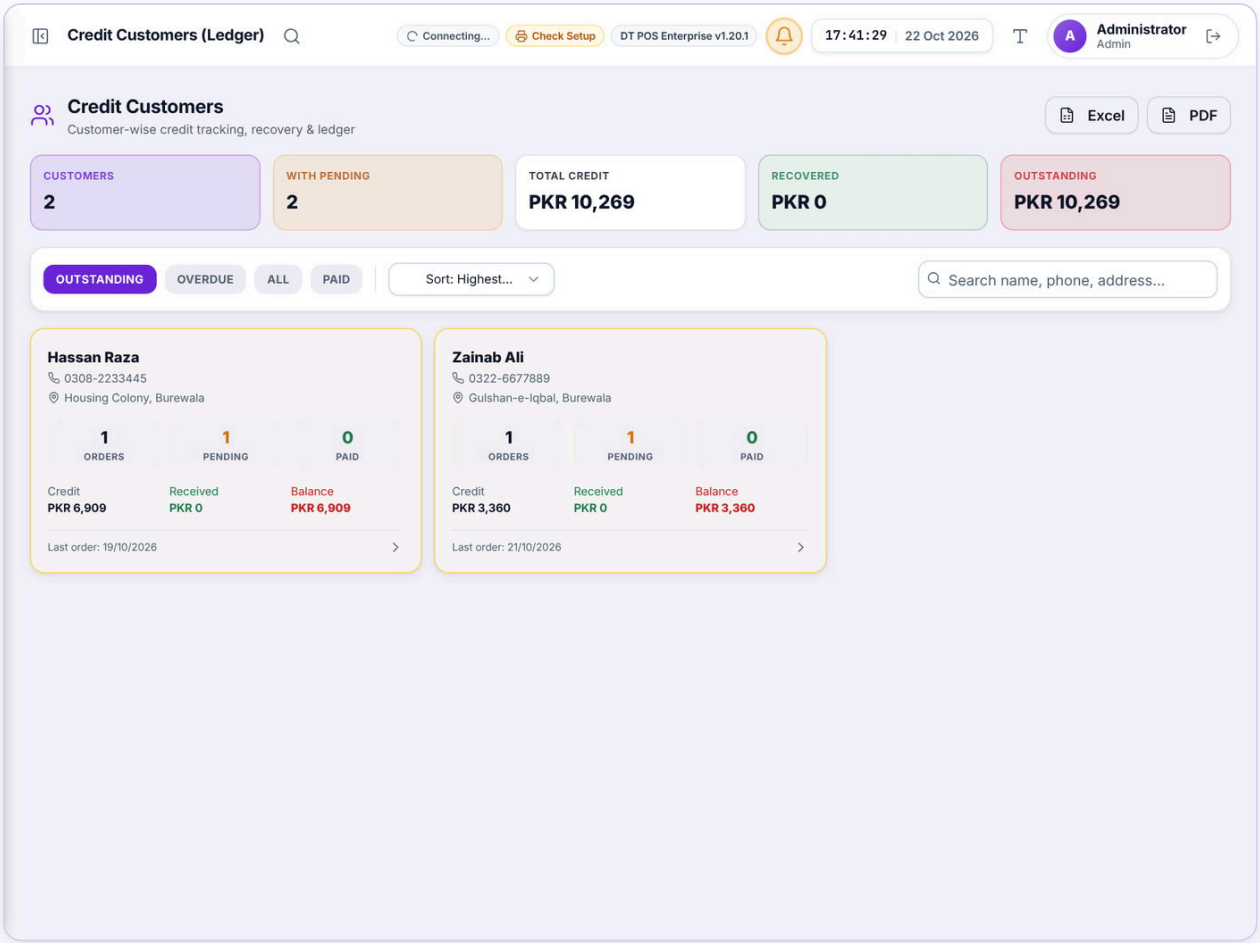

A bill is put on credit from the POS (**More actions → Credit**, 4.10).

> Unpaid credit is never cleared by Day Close — it is carried forward until it is paid.

CREDIT

9.2 Credit customers — the ledger

The same credit, by customer: how many bills each one has open, what they have paid and what they owe.

- **Outstanding**, **Overdue**, **All** or **Paid** customers; sort by highest balance, most recent, most orders or name.
- Click a customer card for their full ledger — every credit bill and payment in date order.
- **Excel** and **PDF** export the list for follow-up calls.

The cards show credit given, received and the balance, and the date of the last order.

10

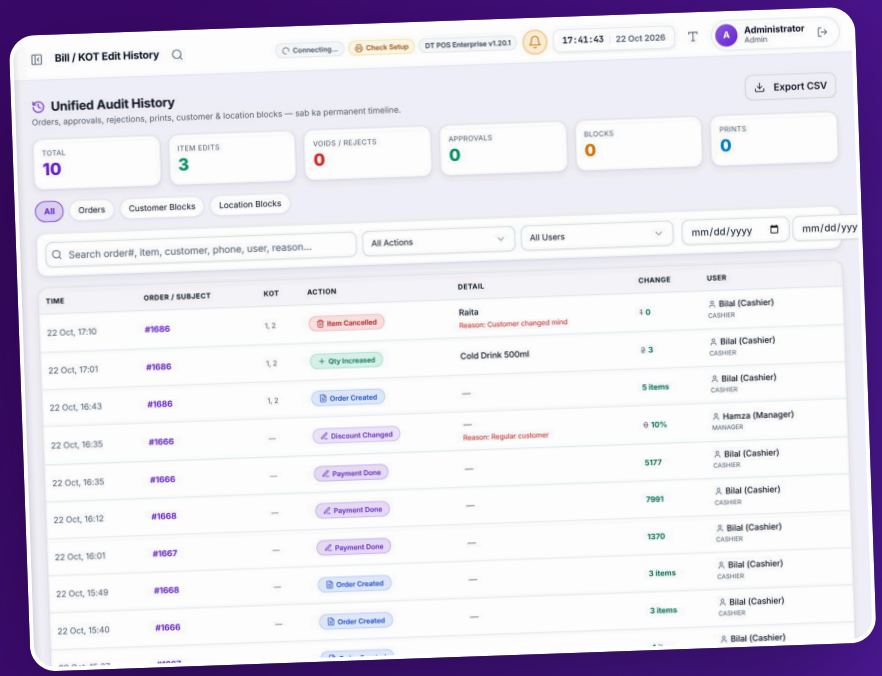

Corrections and audit

Voids, complimentary bills and cancellations; correcting a bill after it was printed; and the permanent record of every change.

Void, complimentary and cancelled bills 57

Bill editor 58

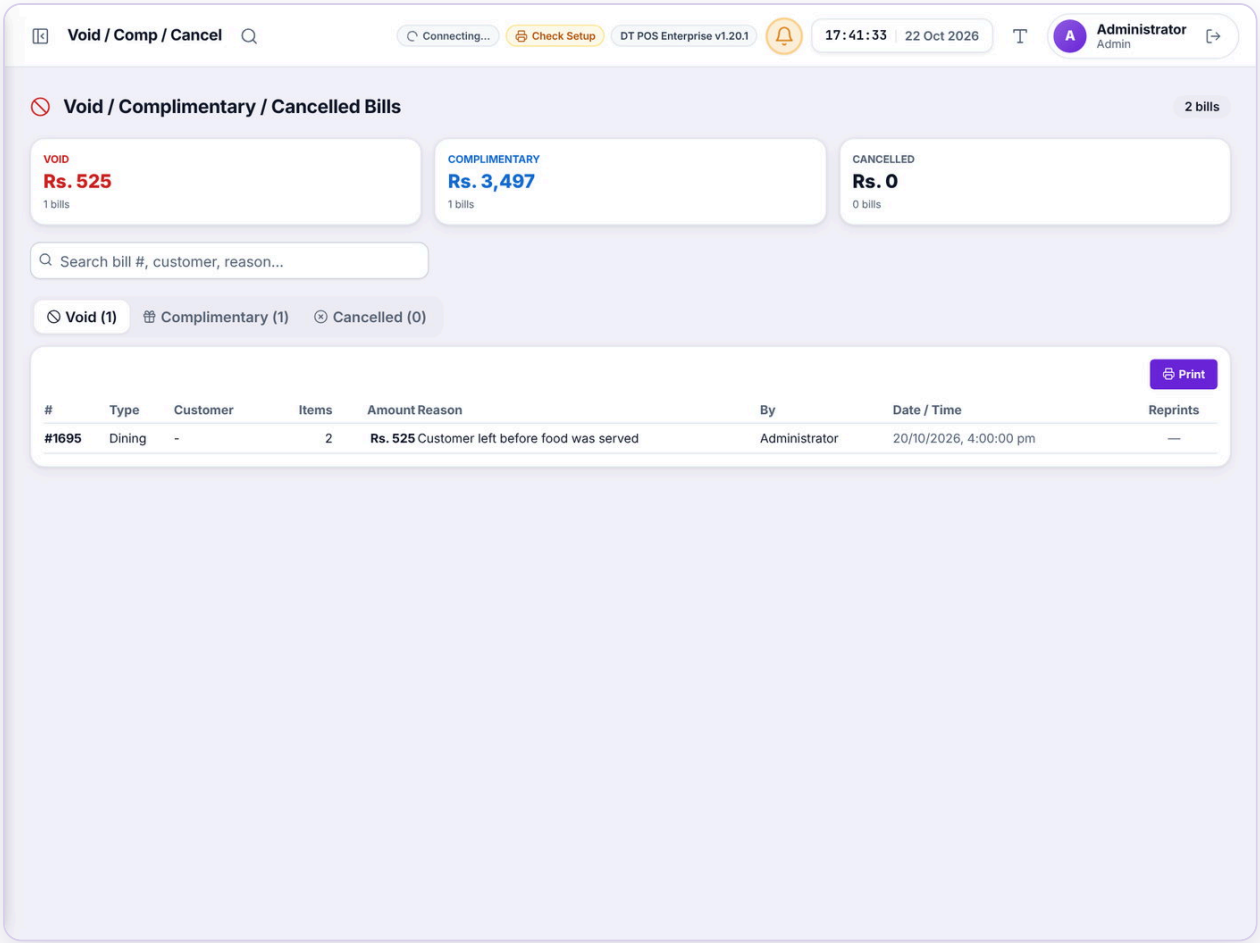

Bill and KOT edit history 59

CORRECTIONS

10.1 Void, complimentary and cancelled bills

Bills that were not sold: voided, given free (complimentary) or cancelled — each with the reason and who did it.

The cards total each kind for the period. Switch between **Void**, **Complimentary** and **Cancelled**, or search by bill, customer or reason.

The table shows the bill, type, customer, items, amount, reason, who did it, when, and how often it was reprinted. **Print** prints the list.

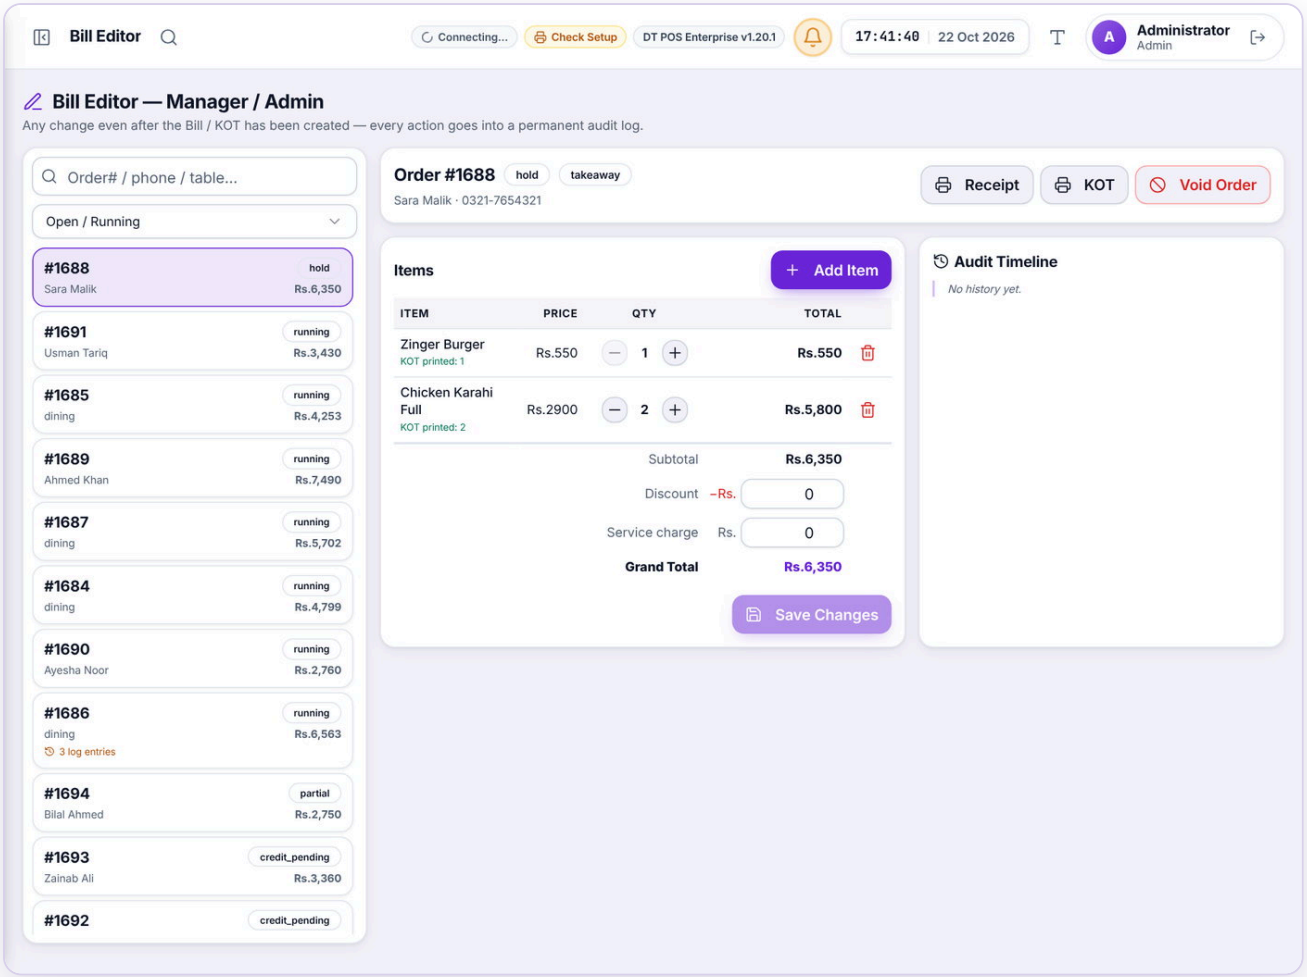

- **Void** — a bill that should not count (e.g. the customer left).
- **Complimentary** — food given free (e.g. a staff meal), with the reason and who approved it.
- **Cancelled** — an order cancelled before it was served; a cancel slip can go to the kitchen.

Open to administrators and managers.

CORRECTIONS

10.2 Bill editor

Change any bill — even after its receipt or KOT was printed. Every change is written to the audit log.

1. Choose open/running bills or another status, and pick the bill on the left (search by number, phone or table).
2. Change quantities, remove lines or **Add Item**; adjust the discount or service charge.
3. Press **Save Changes**.

Receipt and **KOT** reprint the corrected bill; **Void Order** voids it with a reason.

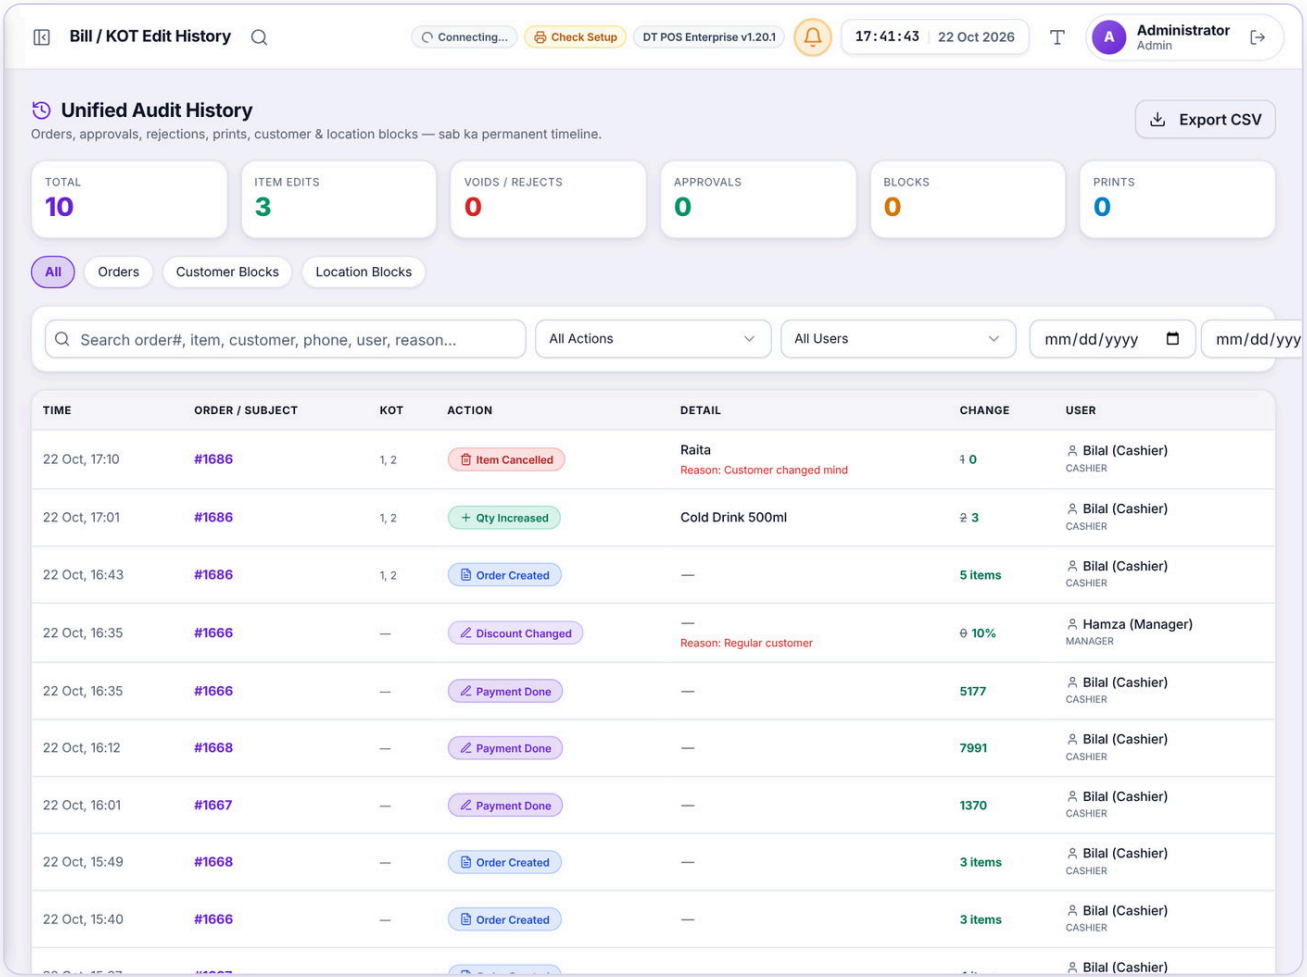

The **Audit Timeline** on the right lists every change to this bill — who, what and when.

> Administrators and managers only. Discount requests from cashiers come here when discount approval is switched on (4.7).

AUDIT

10.3 Bill and KOT edit history

One permanent timeline of item edits, cancellations, discounts, payments, voids, approvals and reprints across all bills.

- The counters show totals by kind: item edits, voids and rejects, approvals, blocks and prints.
- Search by bill, item, customer, phone, user or reason; filter by action, user and dates.
- Each row: time, bill, KOT number, action, the item and reason, the change (e.g. quantity 1 → 0) and the user with their role.
- **Export CSV** downloads the timeline for an accountant or an owner abroad.

Tip. A sudden run of *Item Cancelled* by one user after the KOT printed is worth a look — this screen makes it visible.

11

Menu and deals

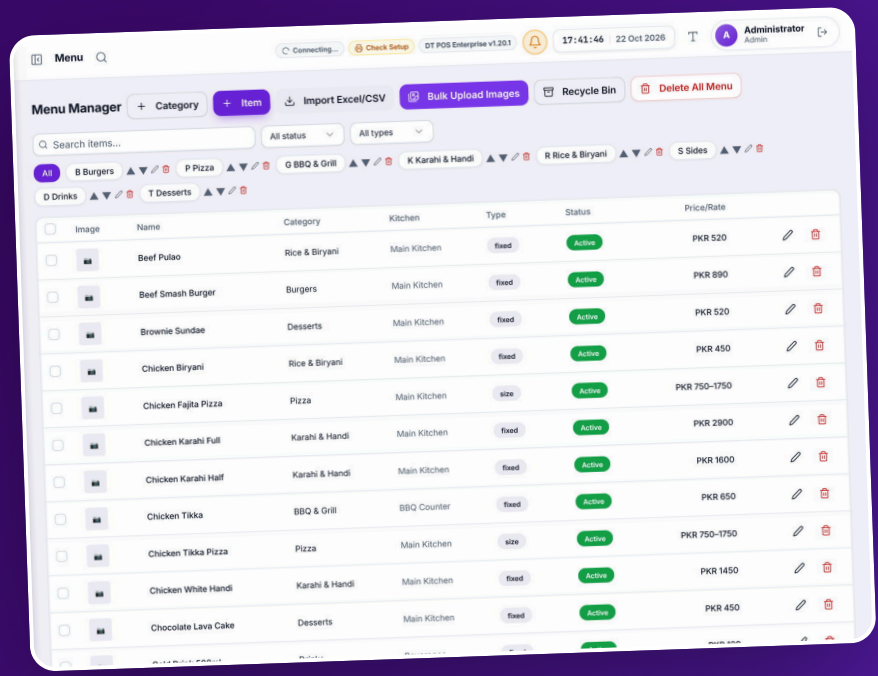

Categories, items, sizes and prices; importing a whole menu from Excel; and combo deals.

Menu manager 61

Adding or editing an item 62

Importing a menu from Excel 63

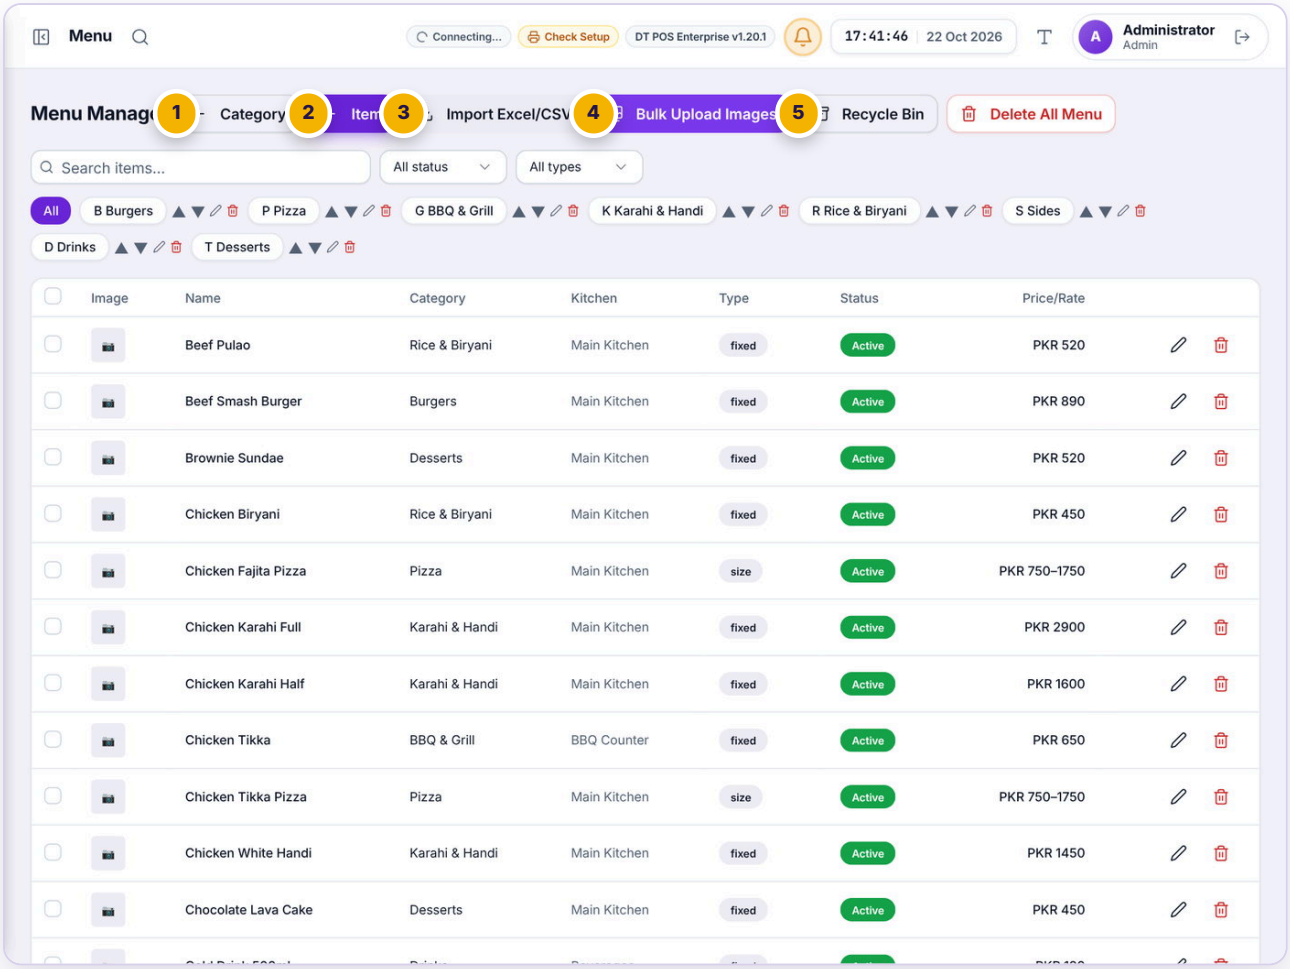

Deals and combos 64

MENU

11.1 Menu manager

Every category and item the POS sells, with its kitchen, pricing type, status and price.

1. **+ Category** — add a category with an emoji icon or a picture.
2. **+ Item** — add an item (11.2).
3. **Import Excel/CSV** — load or update the whole menu (11.3).
4. **Bulk Upload Images** — attach pictures to many items at once.
5. **Recycle Bin** — deleted items and categories, ready to restore.

The category chips under the search box filter the list; their arrows change the order the POS shows them in, and the pencil and bin edit or delete the category.

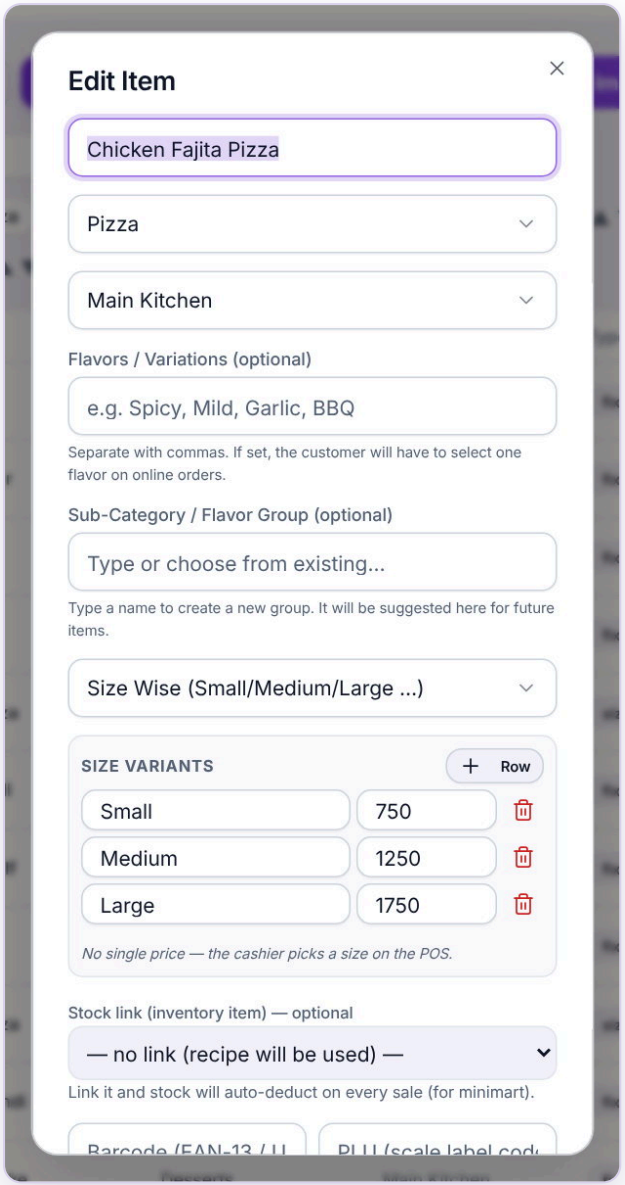

Tick items to act on many at once: **Move to Category**, **Set Sub-Category**, **Mark Active** / **Mark Inactive** or **Delete**.

> **Take care.** **Delete All Menu** permanently removes every item and category. You must type `DELETE ALL` to confirm.

MENU

11.2 Adding or editing an item

One form for every kind of item: a fixed price, sizes, inches, sold by weight, or an open price typed at the POS.

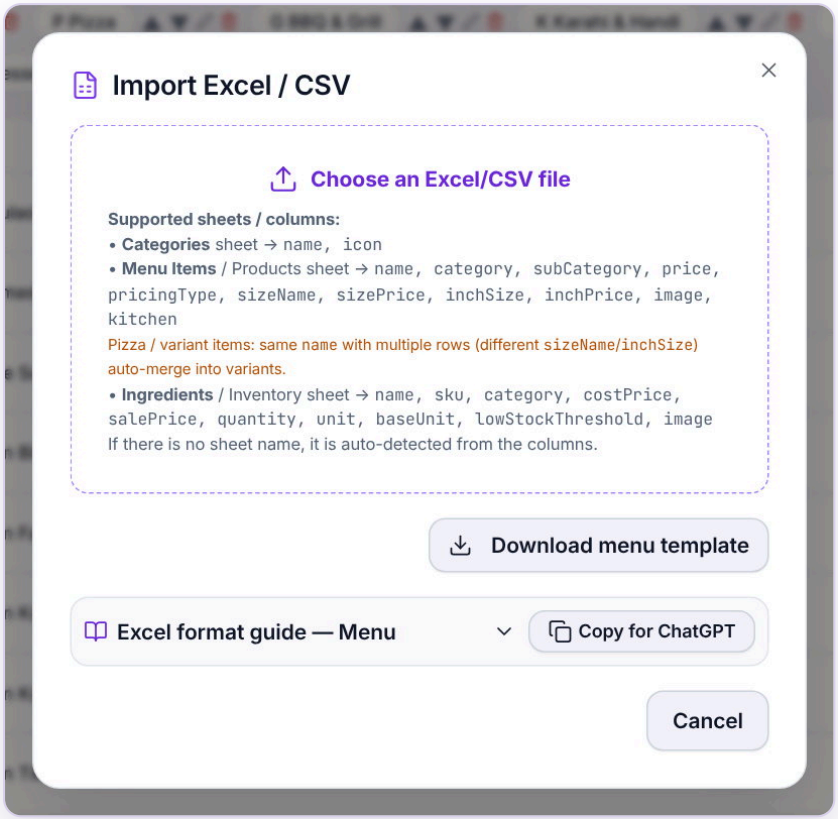

1. **Name**, **category** and the **kitchen** (station) that prepares it — the item's KOT goes to that kitchen.
2. **Flavors / Variations** (optional) — e.g. *Spicy, Mild*; the customer must pick one on online orders.
3. **Sub-Category / Flavor Group** (optional) — groups flavours, e.g. *Pizza Flavors*.
4. **Pricing type**:
   - **Fixed** — one price.
   - **Size wise** — Small / Medium / Large rows, each with its own price (shown here).
   - **Inch wise** or **both** — 9″, 12″… with prices.
   - **Weight** — a rate per kg (4.5).
   - **Manual** — the price is typed on the POS.
5. **Stock link** (optional) — for shop items: each sale takes one unit from that inventory item. If the item also has a recipe, the recipe is used instead (12.3).
6. **Barcode** (EAN-13 / UPC) and **PLU** (scale label code) — for scanning at the POS.
7. Upload a picture, set **Active**, and save.

An inactive item stays in the menu list but is hidden from the POS.

MENU

11.3 Importing a menu from Excel

Load a complete menu — categories, items, sizes and ingredients — from one Excel or CSV file.

1. Press **Download menu template** and fill it in Excel, keeping the column names.
2. Use the sheets **Categories** (name, icon), **Menu Items** (name, category, sub-category, price, pricing type, size / inch name and price, image, kitchen) and, optionally, **Ingredients** for the inventory.
3. For pizzas, repeat the item name on several rows with a different size — they are merged into one item with sizes.
4. Press **Choose an Excel/CSV file**, check the preview and import.

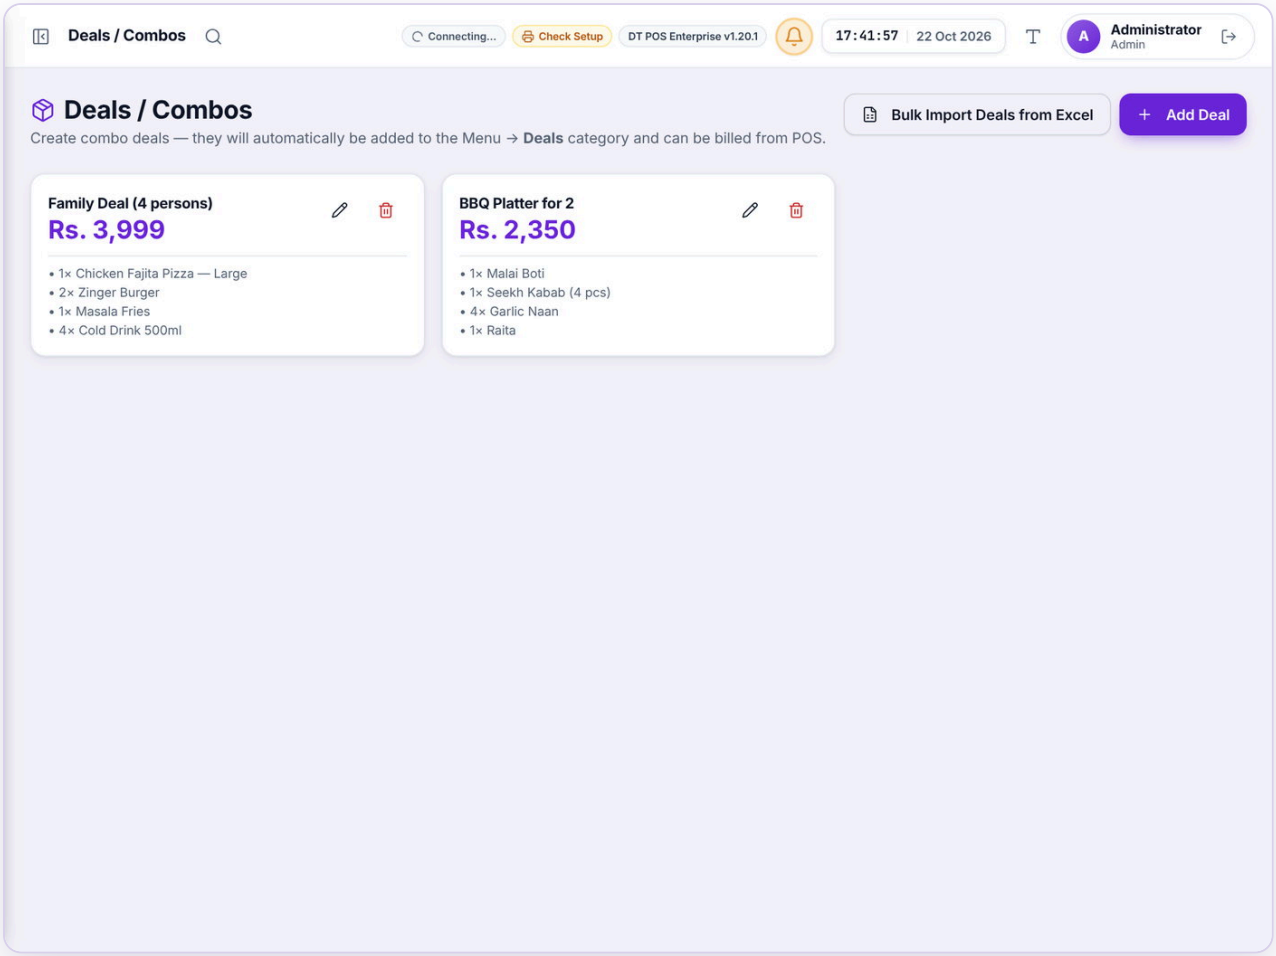

Excel format guide — Menu explains every column; **Copy for ChatGPT** copies the same instructions so an AI assistant can turn an existing price list into the right format.

> **Tip.** Deals can be imported the same way from **Deals / Combos → Bulk Import Deals from Excel**. The full column reference is in *docs/EXCEL_IMPORT_GUIDE.md*.

MENU

11.4 Deals and combos

A fixed price for a set of items. Deals appear on the POS in a Deals category and are billed like any item.

1. Press **Add Deal**.
2. Give it a name and a picture, and set the combo price.
3. Add the items and quantities — for sized items choose the size, e.g. *1 × Chicken Fajita Pizza — Large*.
4. Save. The deal is added to **Menu → Deals**.

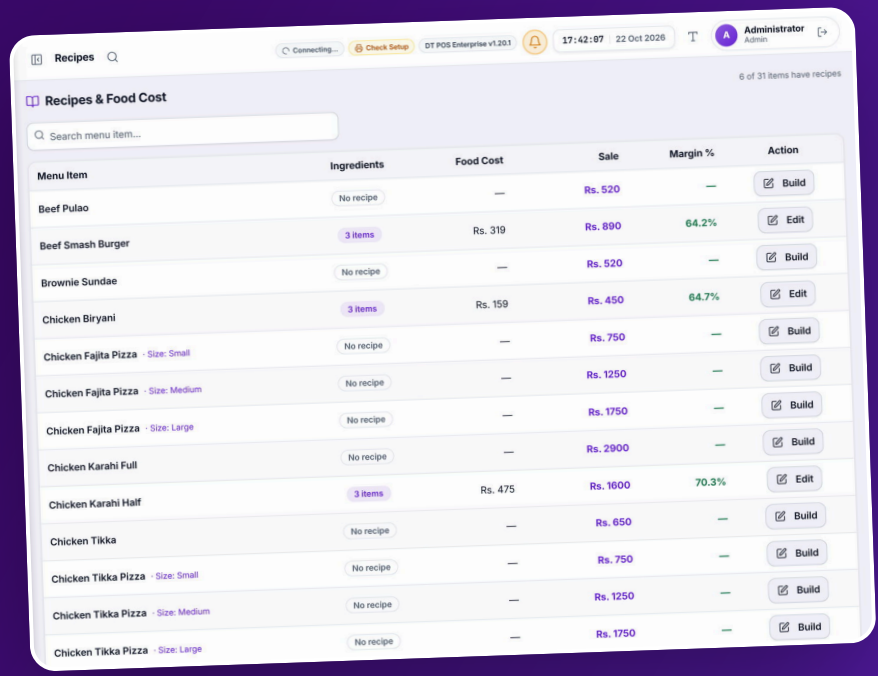

Each card shows the deal's items and price, with edit and delete. **Bulk Import Deals from Excel** loads many deals at once.

12

Inventory and food cost

Stock of raw materials and shop items, recipes that use stock automatically, purchases (GRN) and wastage — and the food-cost figures they produce.

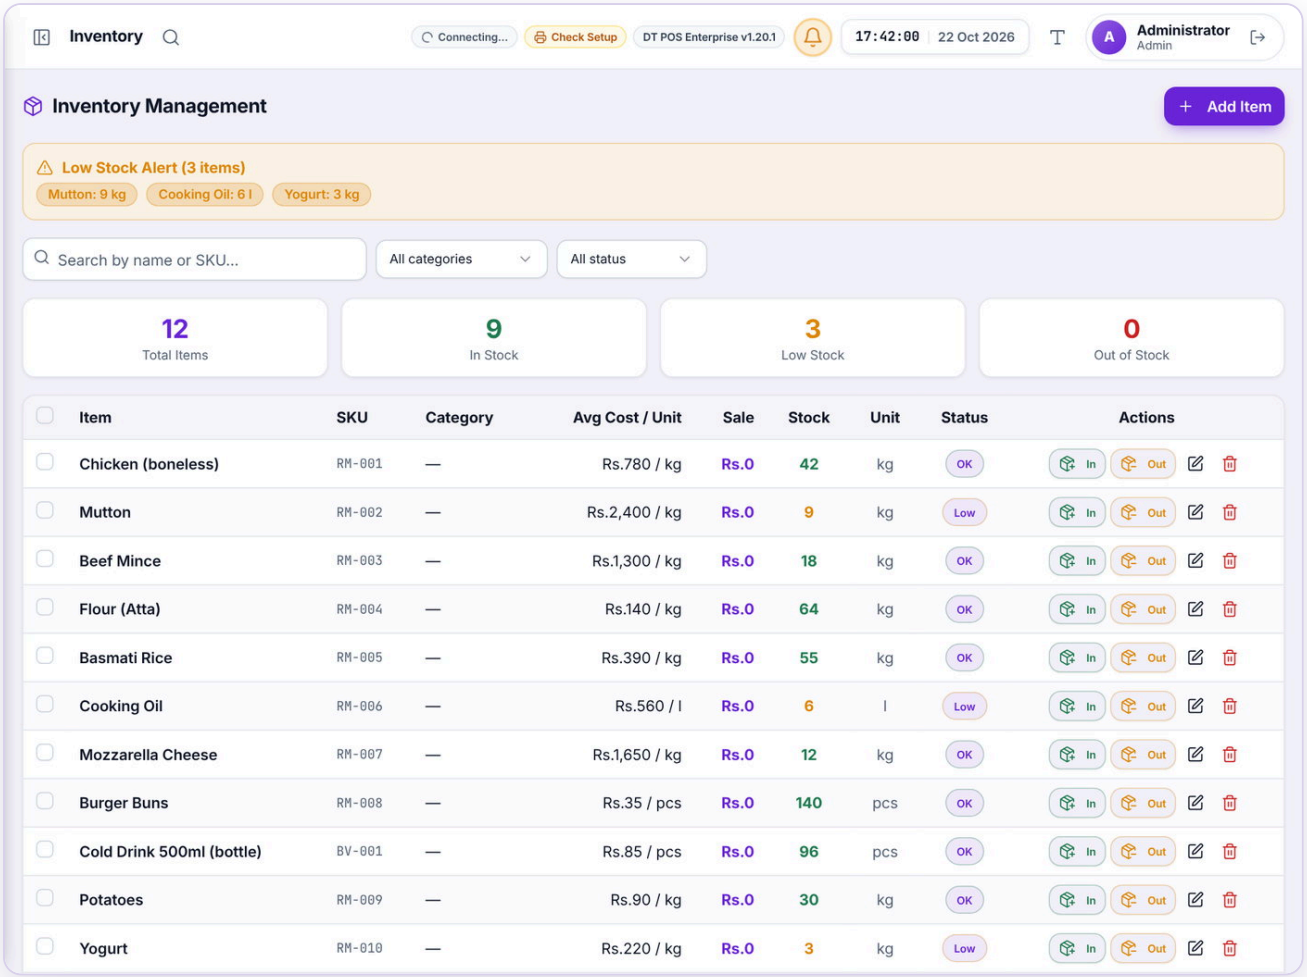

Inventory	66
Stock in, stock out, and recipes	67
Recipes and food cost	68
Receiving — goods received notes (GRN)	69
Wastage	70

INVENTORY

12.1 Inventory

Every stock item with its quantity, unit, average cost and status. Low-stock items are listed at the top.

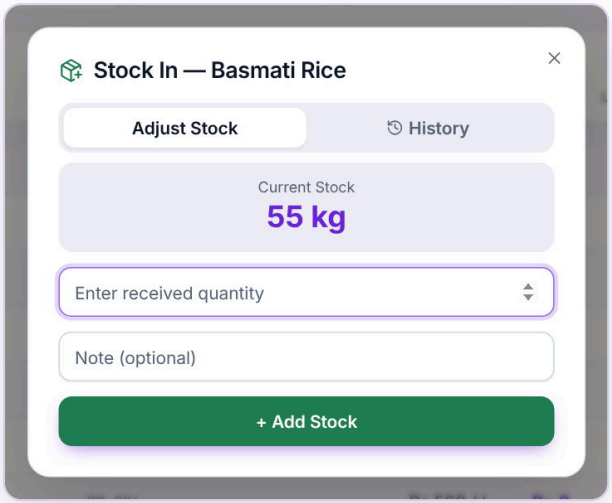

- The **Low Stock Alert** names each item at or below its minimum level.
- Counters: total items, in stock, low stock, out of stock.
- Search by name or SKU; filter by category and status.
- Per item: **In** and **Out** (12.2), **edit** and **delete**.

Add Item asks for the name, SKU, category, the **base unit** (kg, g, l, ml or pcs), the cost, the minimum level, and any **purchase units** — for example *1 Bag = 25 kg*, *1 Crate = 24 pcs* — so purchases can be entered the way the supplier sells them.

Avg Cost / Unit is kept up to date automatically from purchases (12.4).

INVENTORY

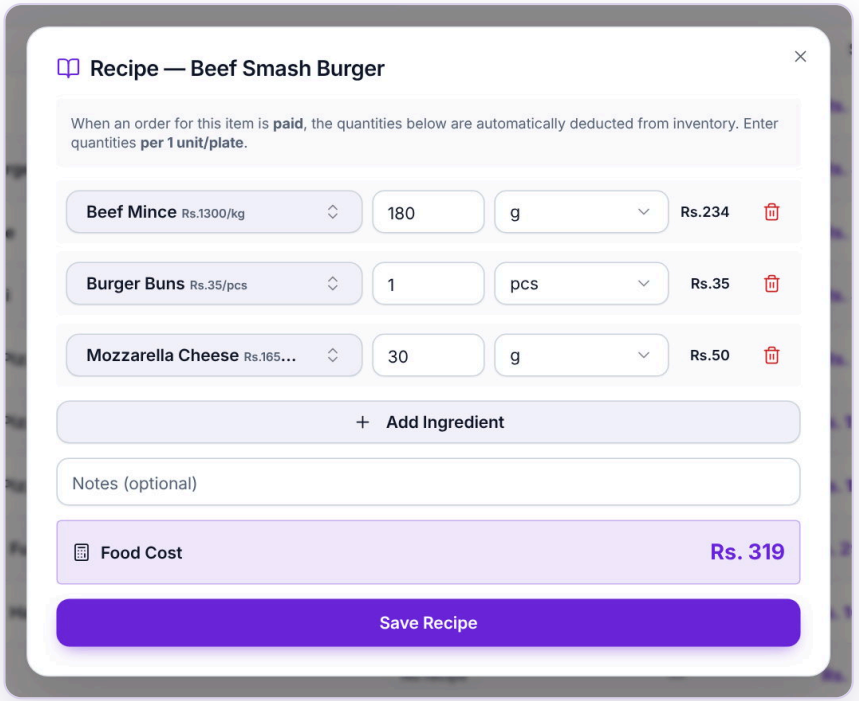

12.2 Stock in, stock out, and recipes

Stock In — from In on an inventory row.

Shows the current stock. Type the quantity received and an optional note, then **Add Stock**. **Out** works the same way for stock taken out. **History** lists every movement of the item: in, out, sales and adjustments.

> **Tip.** Use Receiving (12.4) for supplier deliveries — it also records the price and the supplier's ledger.

Recipe — ingredients for one plate.

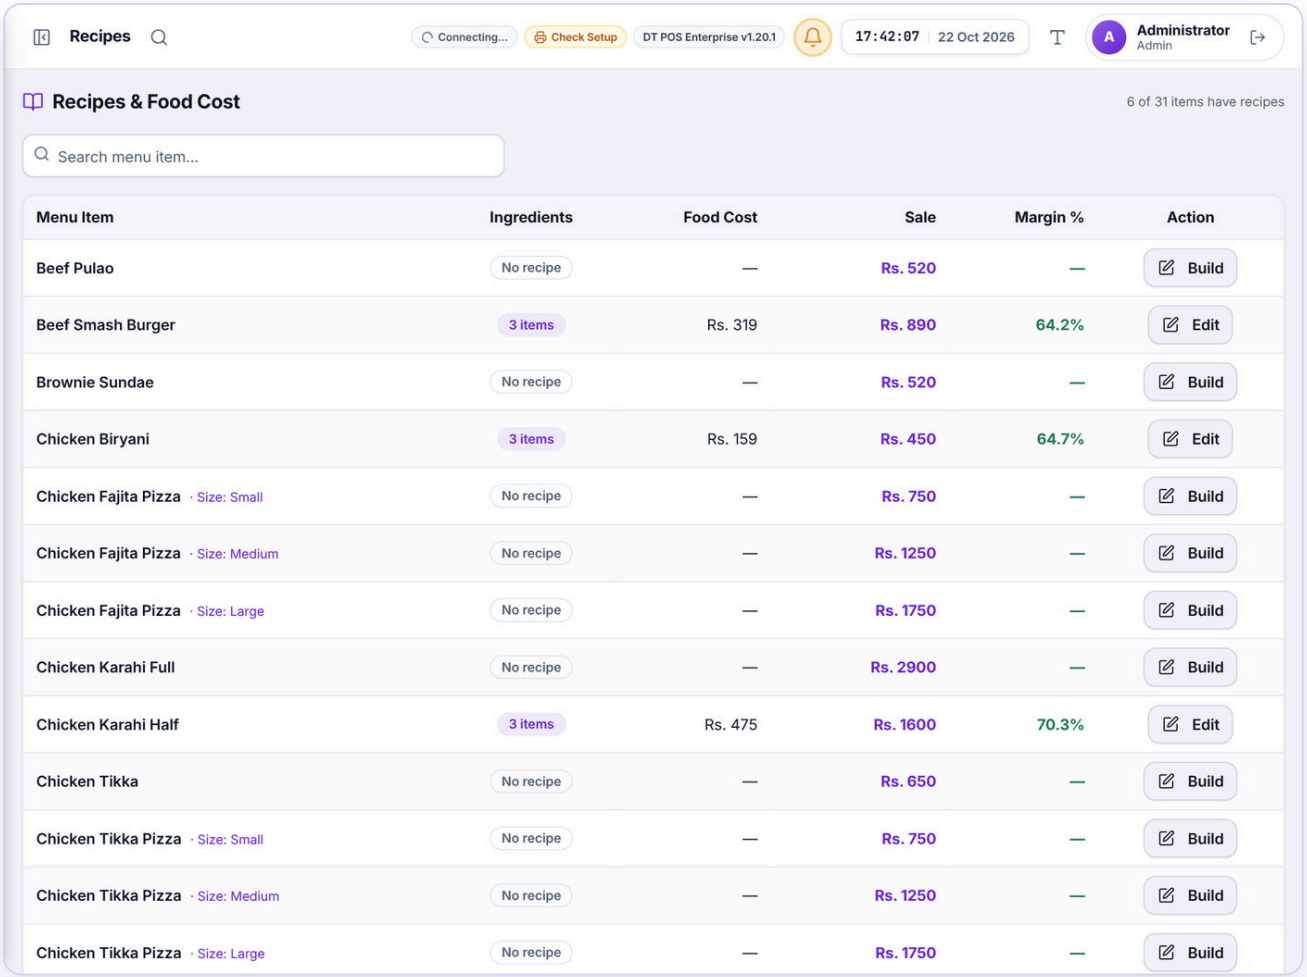

When an order for the item is **paid**, these quantities are taken from inventory automatically. Enter them for one plate (or one kg for weight items), in any unit — g, kg, ml, pcs.

The **Food Cost** is worked out from each ingredient's average cost, e.g. *Beef Smash Burger: Rs 319*.

INVENTORY

12.3 Recipes and food cost

Every menu item — and every size of it — with its recipe, food cost, price and margin.

1. Find the item (each size of a pizza has its own row).
2. Press **Build** (no recipe yet) or **Edit**.
3. Add the ingredients and quantities, then **Save Recipe**.

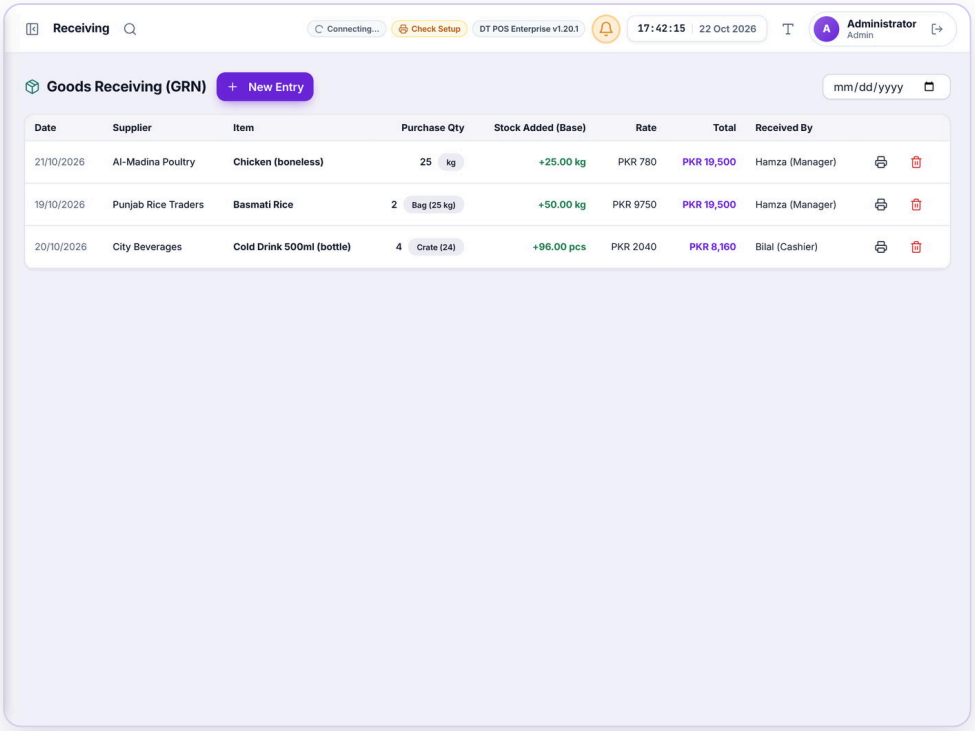

The list shows how many ingredients each recipe has, the food cost, the sale price and the margin. The count at the top right tells you how many items still have no recipe.

> Profit and food-cost reports (16.10) are only as accurate as the recipes. Items without a recipe are reported with no cost.

INVENTORY

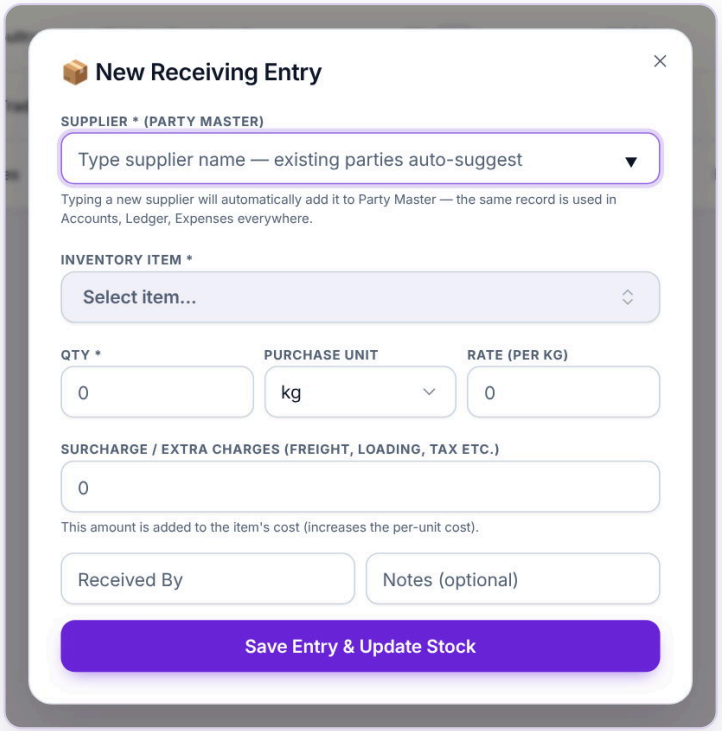

12.4 Receiving — goods received notes (GRN)

Record each delivery from a supplier: the stock goes up, the average cost is updated and the supplier's ledger is charged.

Receiving — the list of deliveries.

Date, supplier, item, quantity in the purchase unit (e.g. *2 Bag (25 kg)*), the stock added in the base unit (*+50 kg*), rate, total and who received it. Print a GRN slip or delete an entry; filter by date.

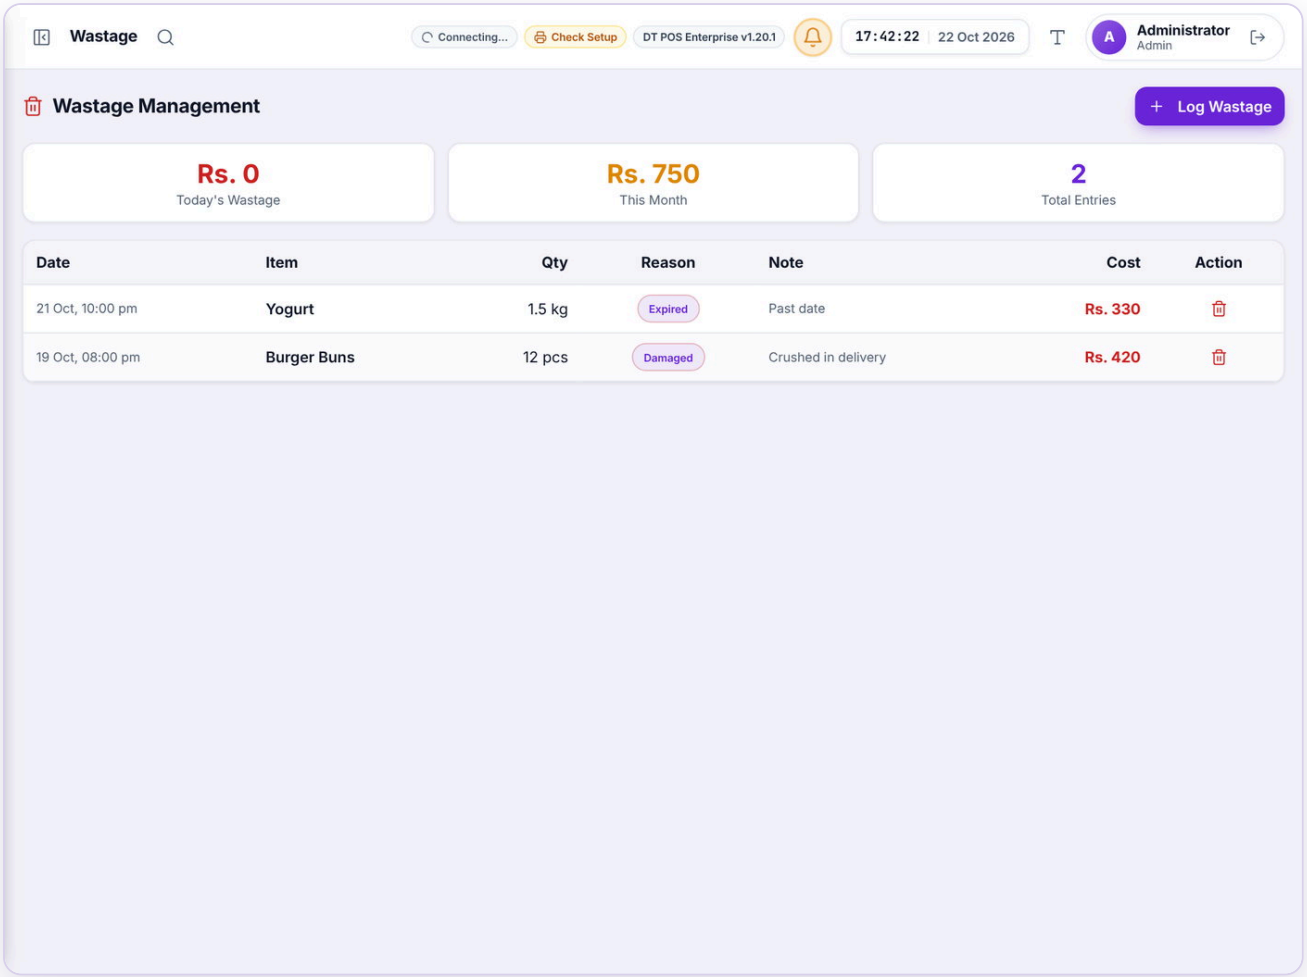

New Receiving Entry

1. Type the supplier — existing parties are suggested; a new name is added to Party Master.
2. Choose the item, quantity, purchase unit and rate.
3. Add any surcharge (freight, loading, tax) — it is spread into the unit cost.
4. **Save Entry & Update Stock**.

INVENTORY

12.5 Wastage

Stock thrown away or used without a sale, with its cost — so stock levels stay true and the loss is visible.

1. Press Log Wastage.
2. Choose the item and quantity and a reason: **Expired**, **Damaged**, **Spilled**, **Customer Returned**, **Staff Meal** or **Other**; add a note.
3. Save. The stock is reduced and the cost is recorded at the item's cost price.

The counters show today's and this month's wastage cost. Wastage also appears in the Profitability report (16.10).

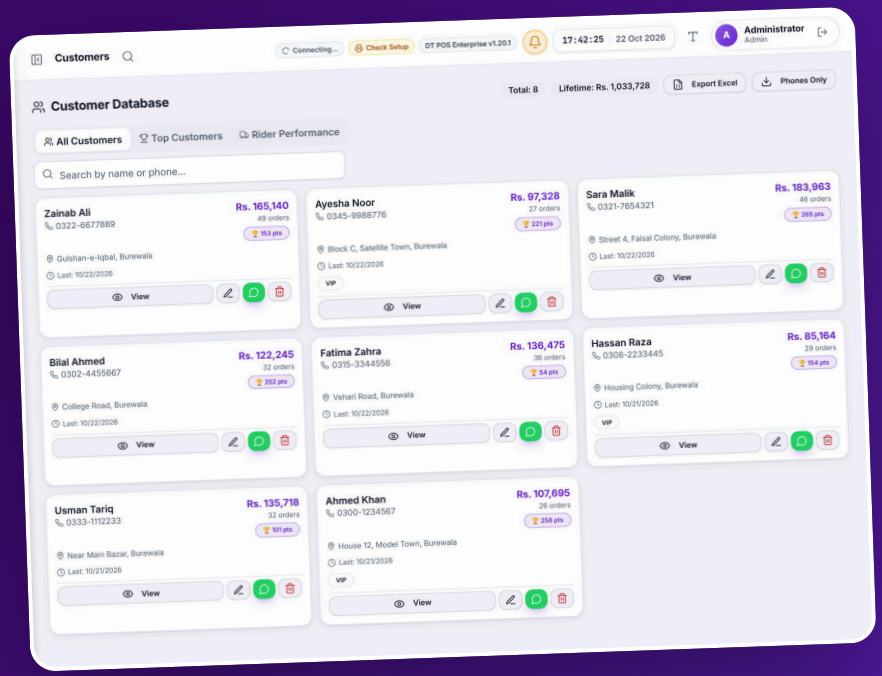

> Recipes, wastage, profitability and cost reports are switched on together with **Settings → General → Food Cost & Profit Tracking**. Off, the POS keeps simple stock without cost columns.

13

Customers and marketing

A customer database that builds itself from your bills, insights about who buys what, promo codes, and WhatsApp messages to one or many customers.

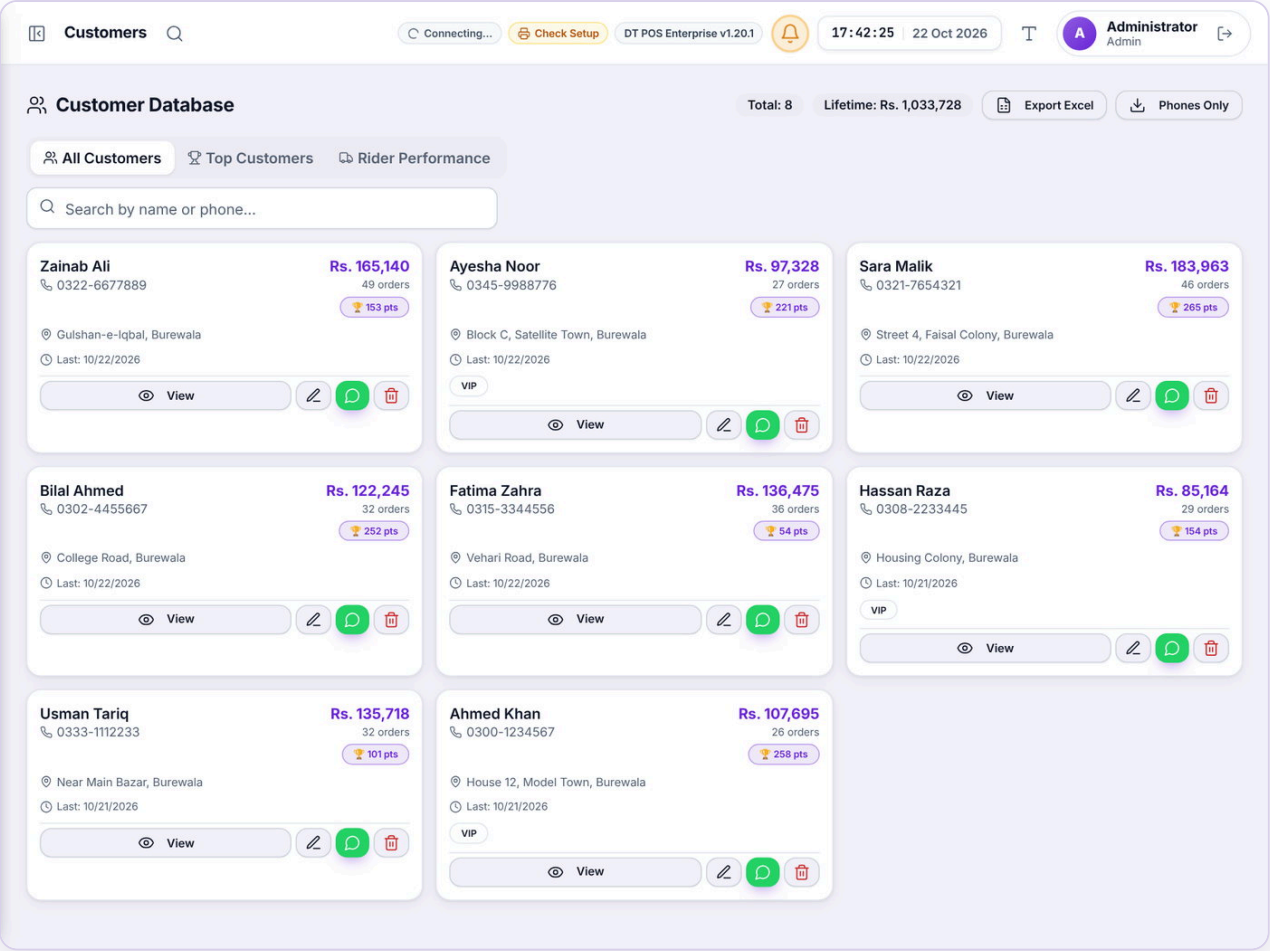

Customer database	72
Customer profile	73
Top customers and CRM insights	74
Contacts — WhatsApp messages to many customers	75
Promo codes	76
WhatsApp	77

CUSTOMERS

13.1 Customer database

Every customer whose name or phone was entered on a bill — saved automatically, with their spend, orders and loyalty points.

- Each card: name, phone, address, lifetime spend, number of orders, loyalty points, last order and tags such as **VIP**.
- Search by name or phone.
- **View** opens the customer profile (13.2); the pencil edits; the green button opens WhatsApp; the bin deletes.
- **Export Excel** saves the full list; **Phones Only** saves just names and numbers.

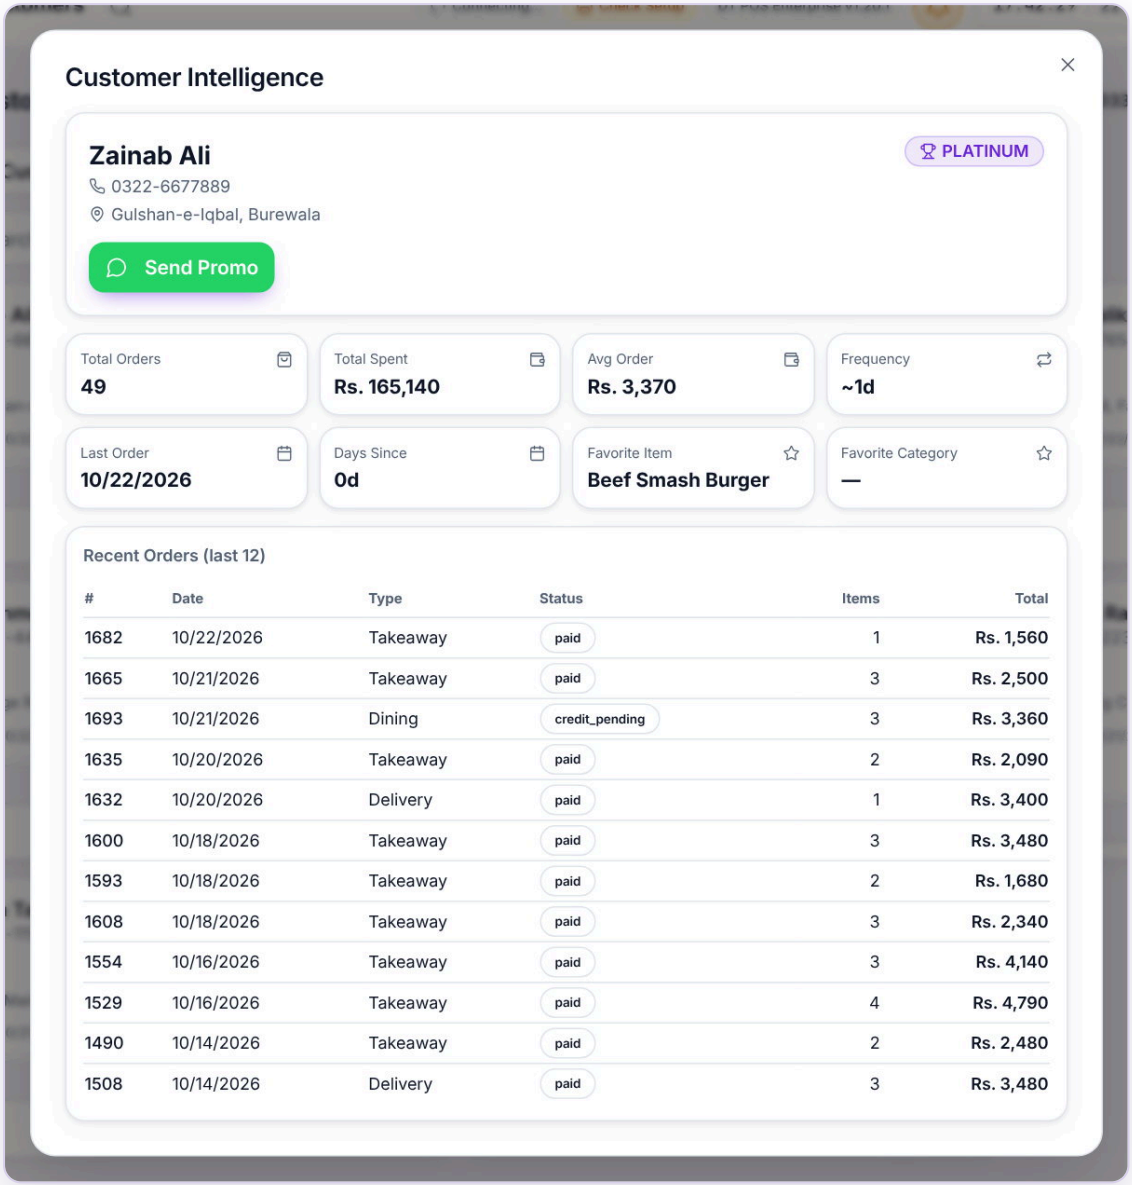

The header shows the number of customers and their lifetime spend.

Loyalty: when switched on in **Settings → General → Loyalty Program**, customers earn points on every paid order and can redeem them at the POS.

CUSTOMERS

13.2 Customer profile

Everything you know about one customer, worked out from their bills.

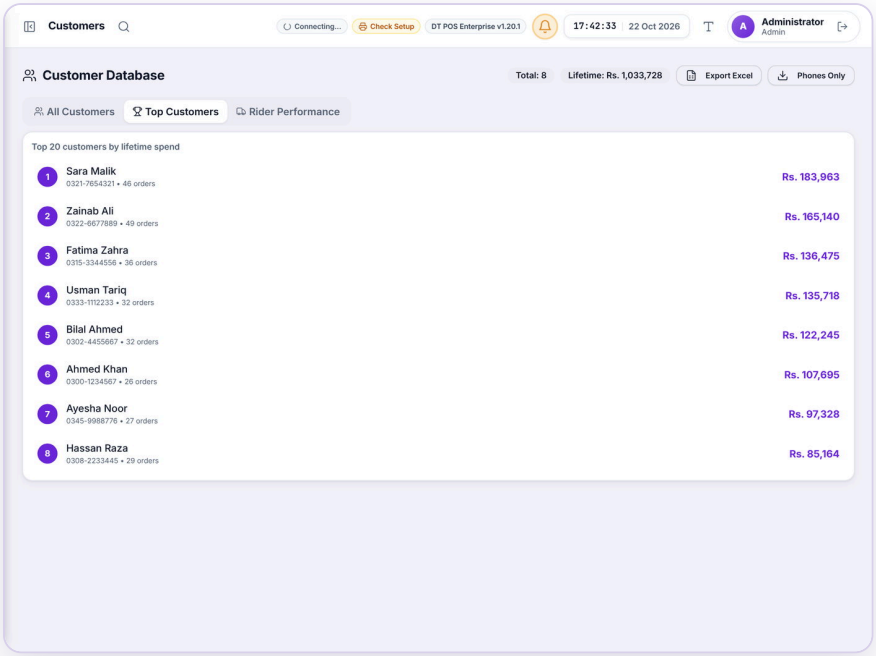

- **Grade** by lifetime spend: *Regular*, *Silver* (Rs 5,000+), *Gold* (Rs 20,000+), *Platinum* (Rs 50,000+).
- **Total orders**, **total spent**, **average order** and **how often** they order.
- **Last order**, **days since**, **favourite item** and **favourite category**.
- The last twelve orders with date, type, status, items and total.

Send Promo opens WhatsApp with a ready message for the customer's grade.

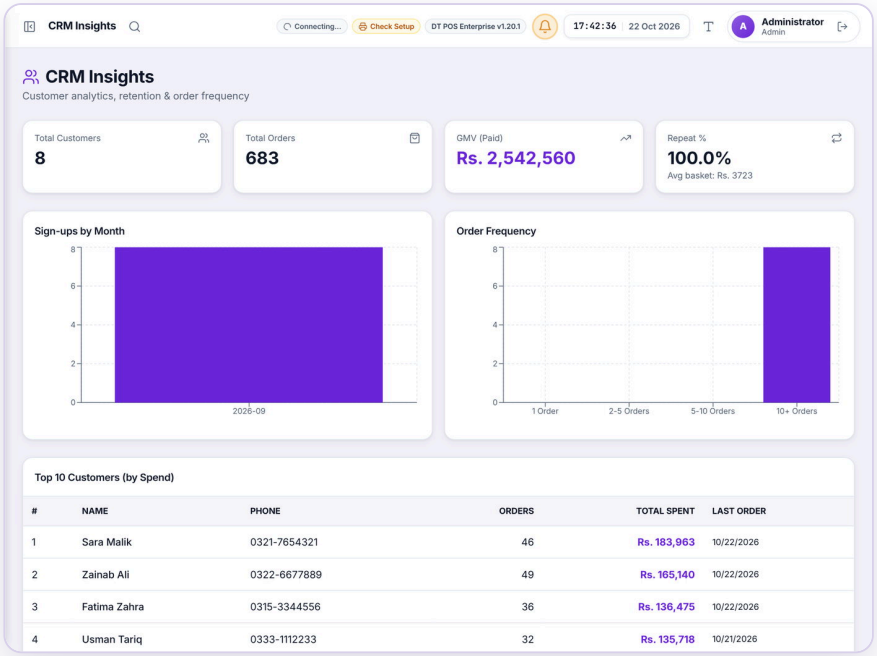

CUSTOMERS

13.3 Top customers and CRM insights

Top Customers tab — by lifetime spend.

The twenty best customers by lifetime spend, with orders and phone. **Rider Performance** (the third tab) ranks riders by deliveries.

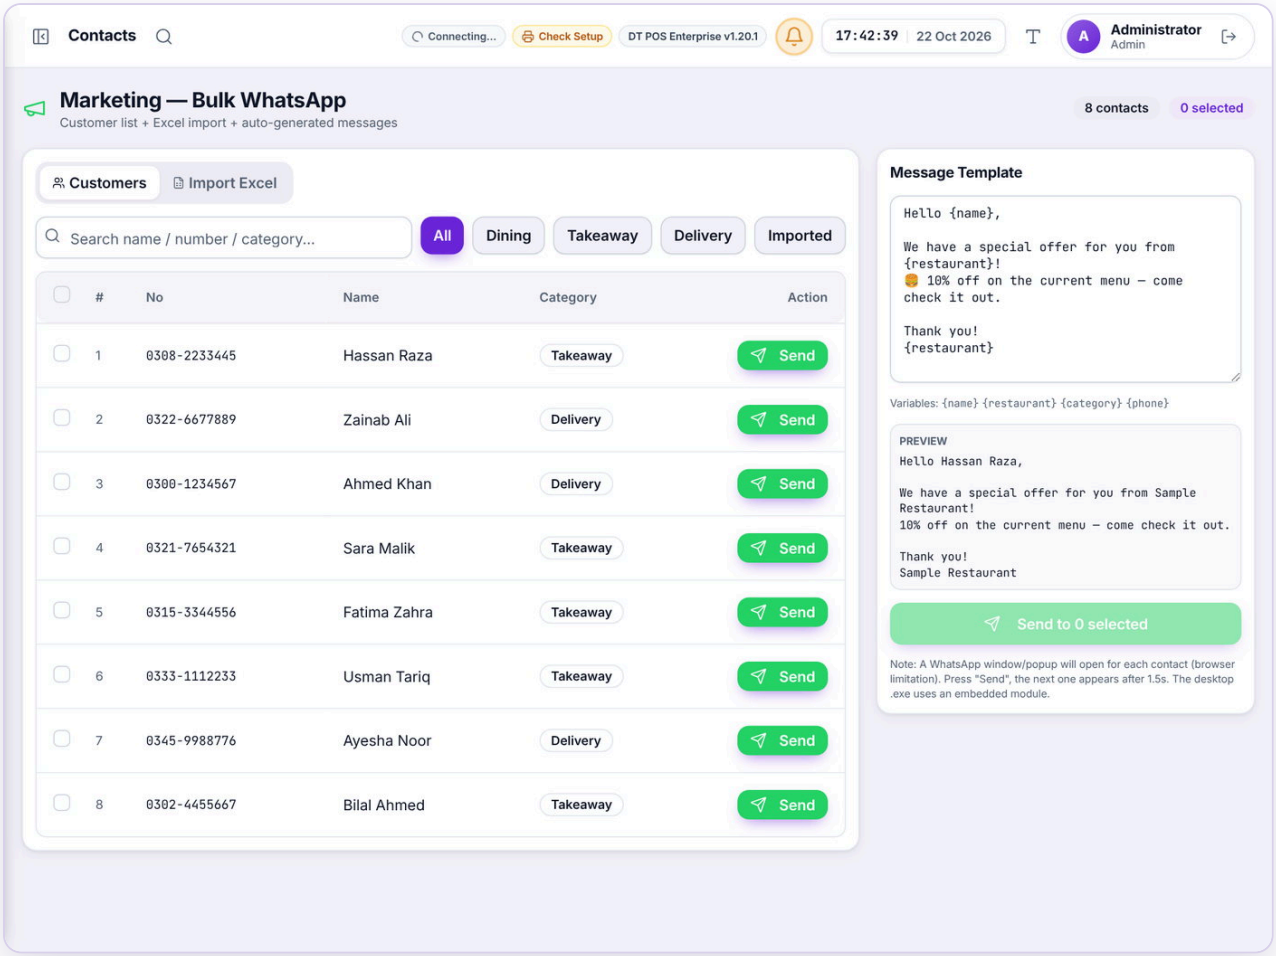

CRM Insights — retention and frequency.

Total customers and orders, paid sales (GMV), repeat rate and average basket; sign-ups by month; how many customers ordered once, 2–5, 5–10 or 10+ times; and the top ten by spend.

MARKETING

13.4 Contacts — WhatsApp messages to many customers

Pick customers — or import a list from Excel — and send each one a personal WhatsApp message.

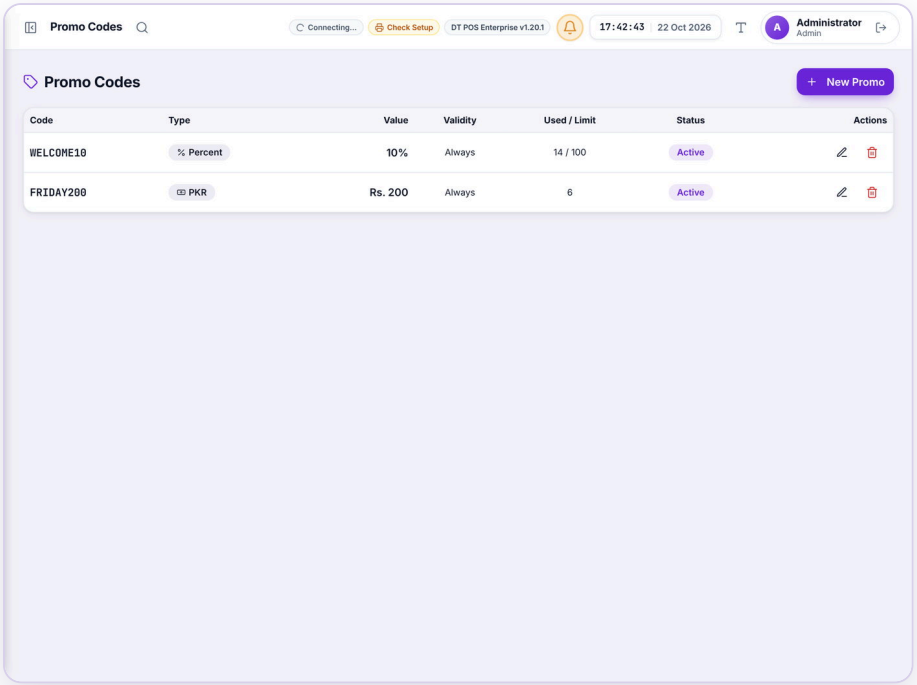

1. Choose **Customers**, or **Import Excel** for an outside list.
2. Filter by Dining, Takeaway, Delivery or Imported; tick the contacts.
3. Write the message. `{name}`, `{restaurant}`, `{category}` and `{phone}` are filled in for each person; the preview shows the result.
4. Press **Send to ... selected**, or **Send** on one row.

Status. Messages go through WhatsApp Web: a window opens for each contact with the text filled in, and you press Send there. There is no automatic bulk sending.

MARKETING

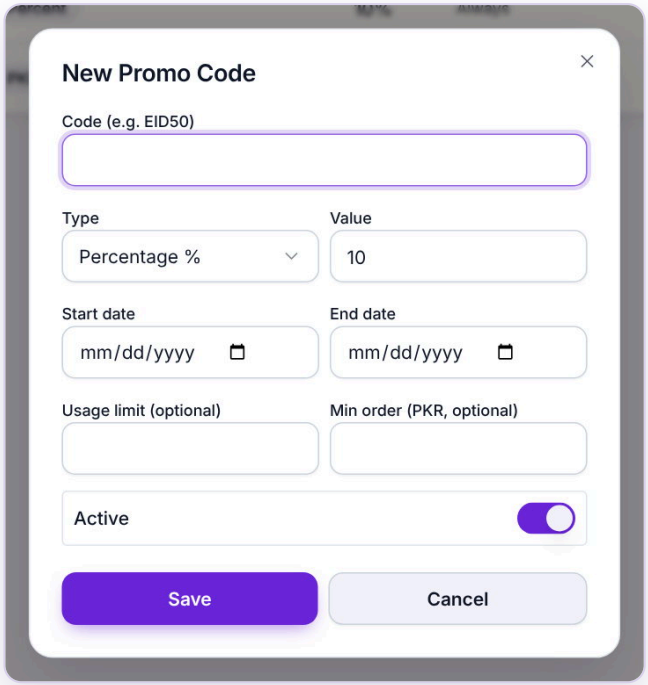

13.5 Promo codes

Discount codes customers quote at the counter, with dates, limits and a usage count.

Promo Codes — the list.

Code, type (percent or rupees), value, validity, used / limit and status. Edit or delete with the icons. Codes are applied in the POS bill (4.7).

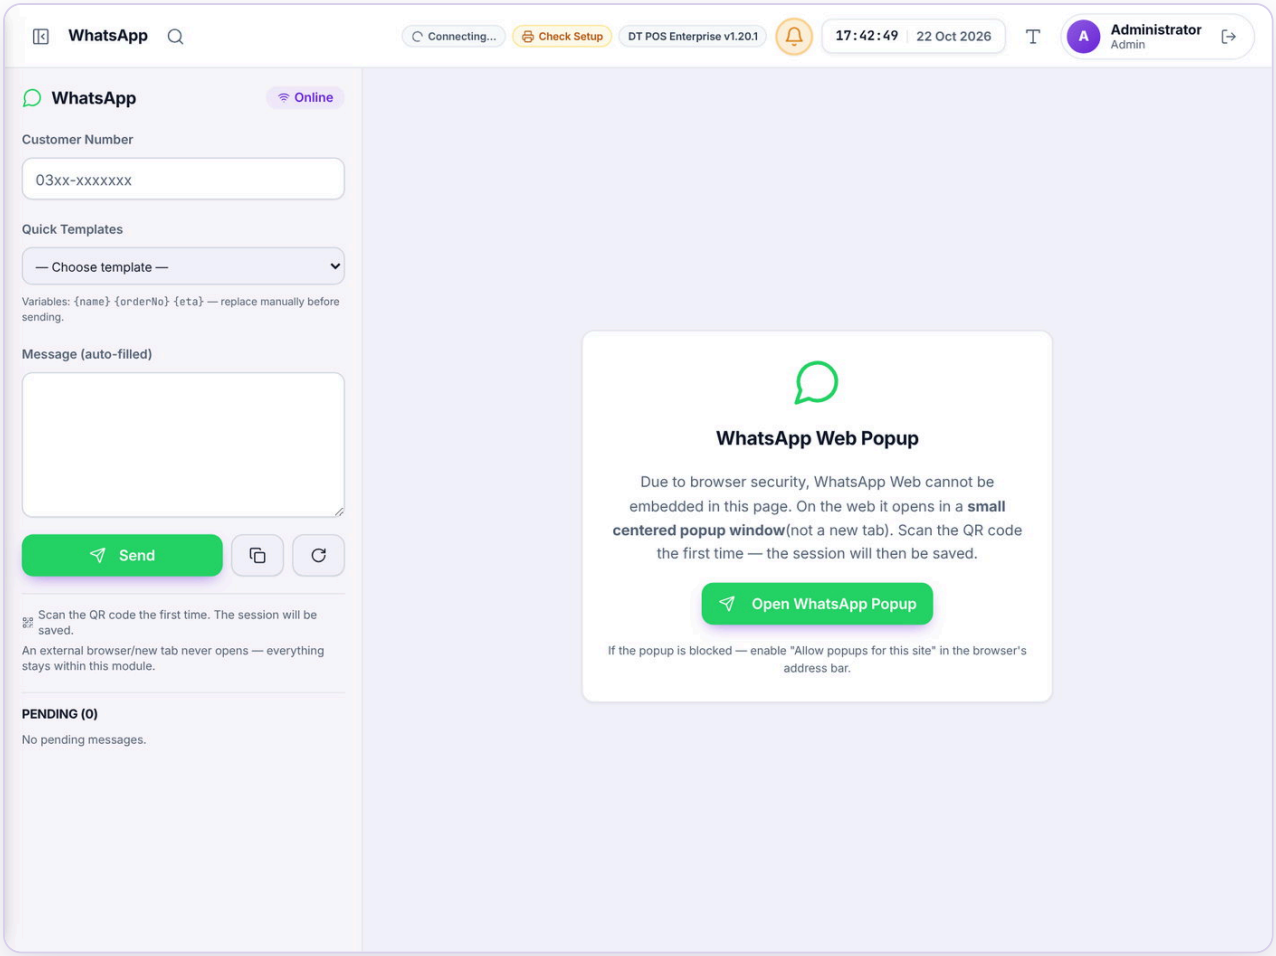

New Promo Code

1. Type the code, e.g. `EID50`.
2. Choose **Percentage** or a fixed amount, and the value.
3. Optional: start and end date, usage limit, minimum order.
4. Leave **Active** on and Save.

MARKETING

13.6 WhatsApp

Send one customer a message from a template — order ready, bill paid, delivery status — without leaving the POS.

1. Type the customer's number.
2. Pick a **Quick Template** — the message is filled in. Edit it if you like.
3. Press **Send**.

The first time, press **Open WhatsApp Popup** and scan the QR code with the restaurant's phone; the session is remembered.

Templates are edited in **Settings → WhatsApp**; the default delivery-status template is also used by the delivery board. The pickup "order ready" message is set in **Settings → Self-Pickup**.

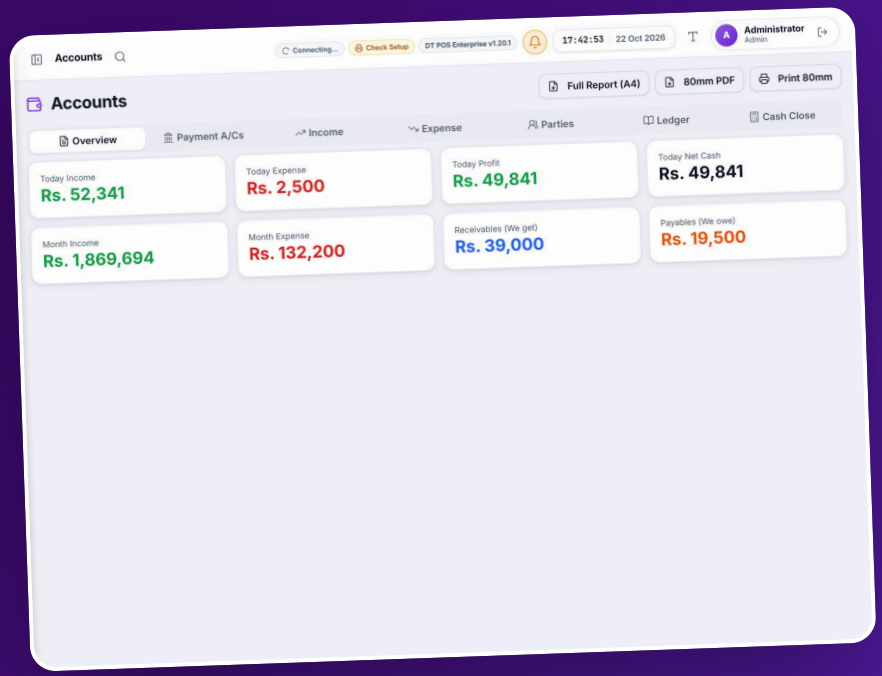

Status. Sending uses WhatsApp Web in a small window and needs an internet connection; the rest of the POS does not.

14

Accounts

Income and expenses, the accounts customers pay into, supplier and customer ledgers, the daily cash count and daily-wage workers.

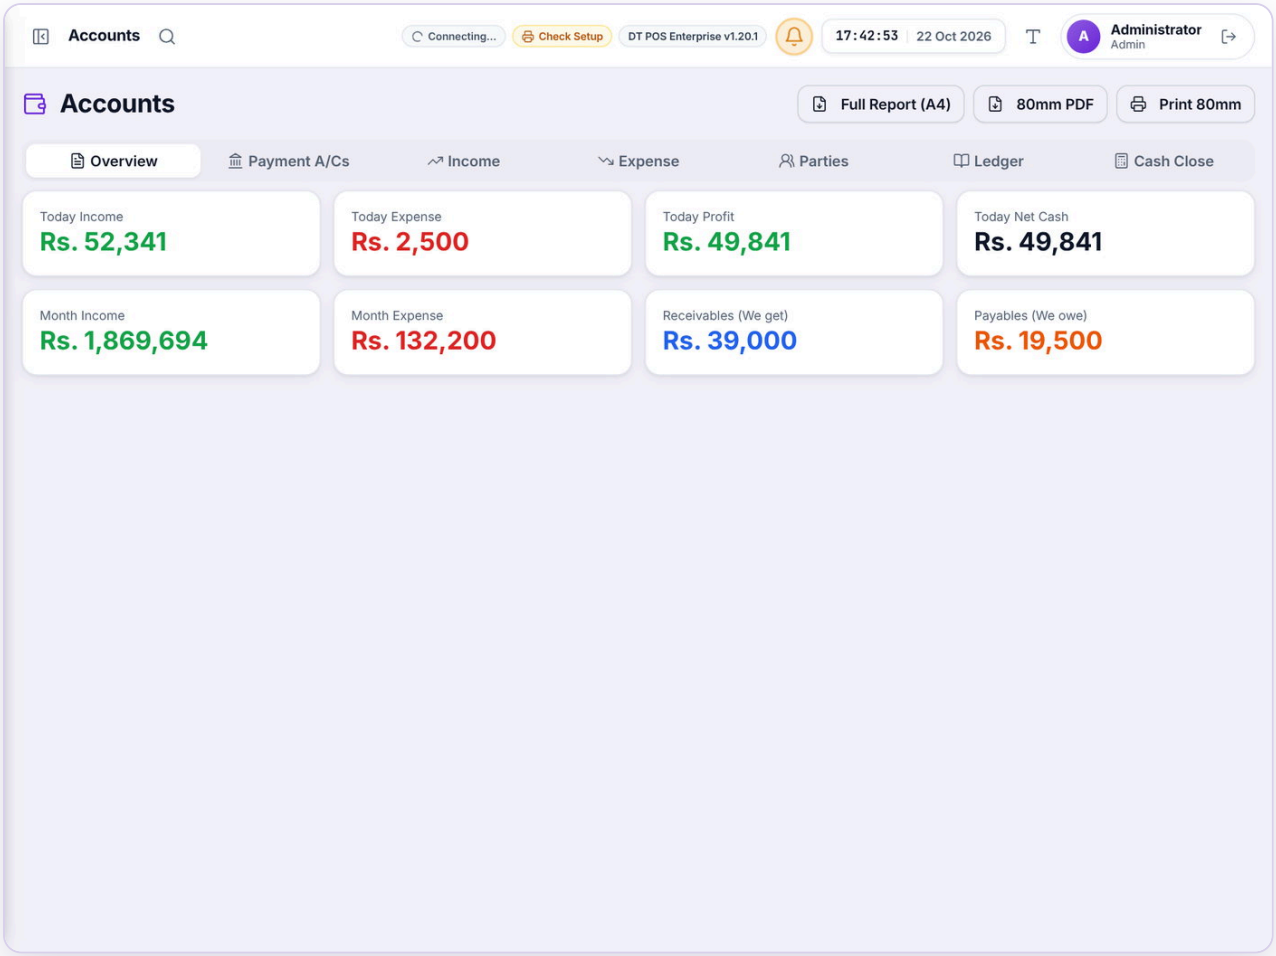

Accounts overview	79	Cash close — counting the drawer	82
Payment accounts	80	Party master — suppliers and customers	83
Income and expenses	81	Daily wages	84

ACCOUNTS

14.1 Accounts overview

Today's and this month's income, expenses and profit, and what is owed to you and by you.

- **Today**: income, expense, profit and net cash.
- **This month**: income and expense.
- **Receivables** (what customers and parties owe you) and **payables** (what you owe suppliers), from the party ledgers.

Full Report (A4), **80mm PDF** and **Print 80mm** produce the accounts report for the period.

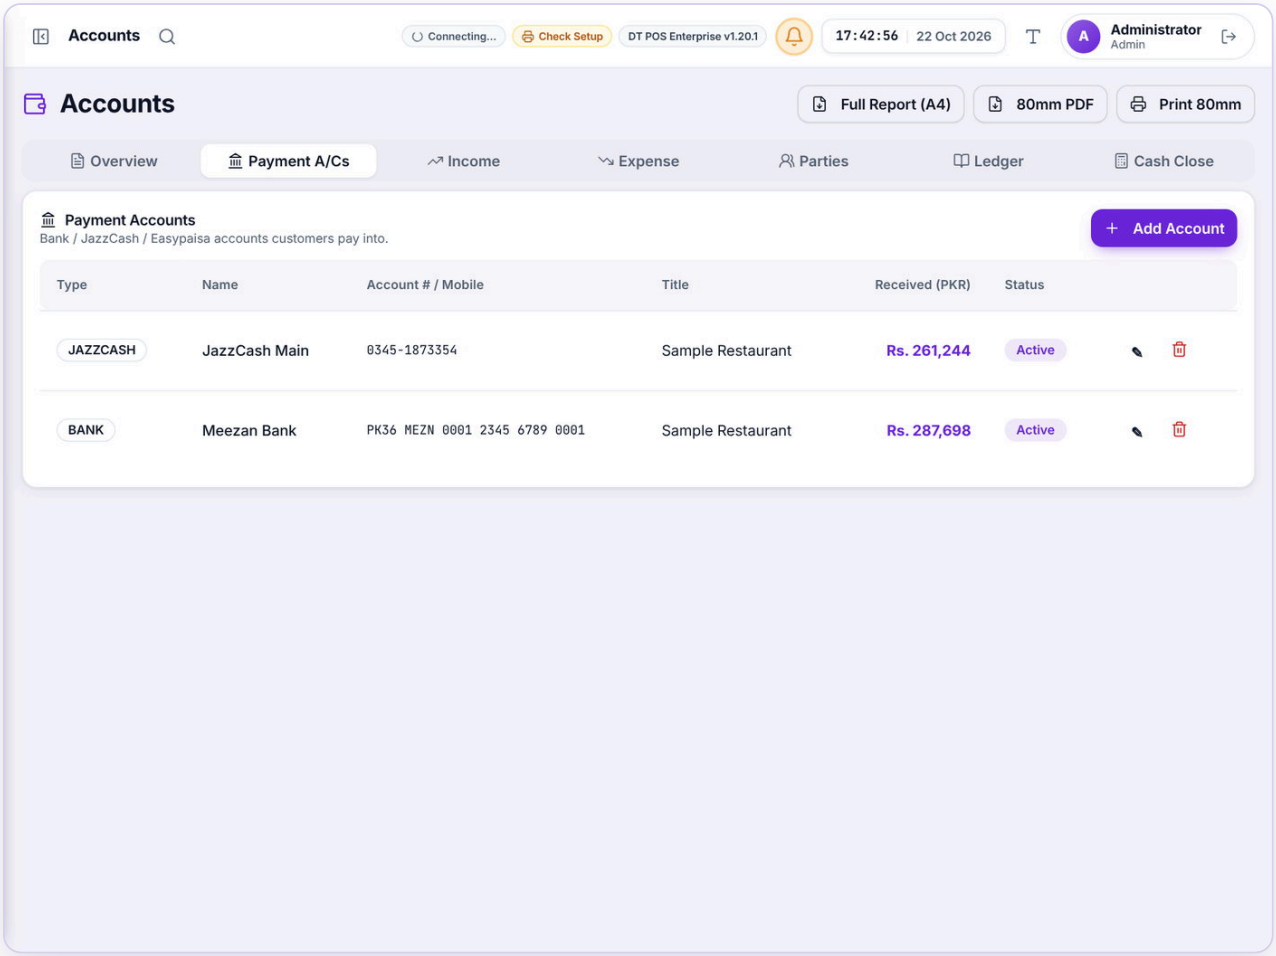

The tabs open the parts of Accounts: Payment A/Cs, Income, Expense, Parties, Ledger and Cash Close.

> Sales are counted as income automatically. Expenses, other income and payments are entered here.

ACCOUNTS

14.2 Payment accounts

The bank, JazzCash and Easypaisa accounts customers pay into. They appear on the payment screen under Online and Split.

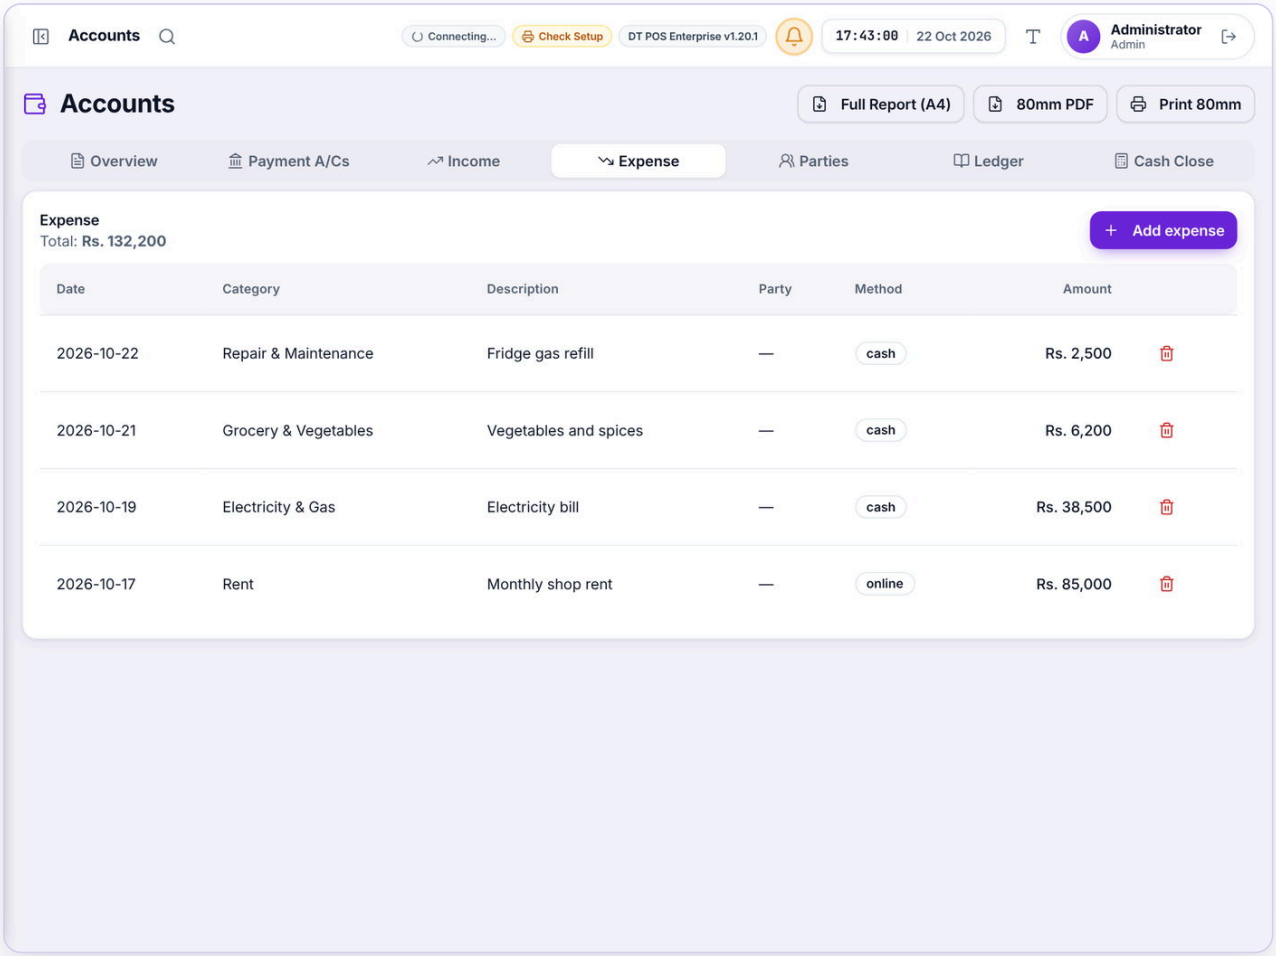

1. Press **Add Account**.
2. Choose the type (Bank, JazzCash, Easypaisa, wallet, cash or other), the name, the account or mobile number and the account title.
3. Save.

The list shows how much each account has received from bills. Reports Center can list bills per account (16.6), so you can check the bank statement against the POS.

ACCOUNTS

14.3 Income and expenses

Every payment that is not a sale — rent, bills, groceries, repairs — and any other income.

1. Open the **Expense** (or **Income**) tab and press **Add expense**.
2. Enter the date, category, description, amount and how it was paid; link a party if it is a supplier payment.
3. Save.

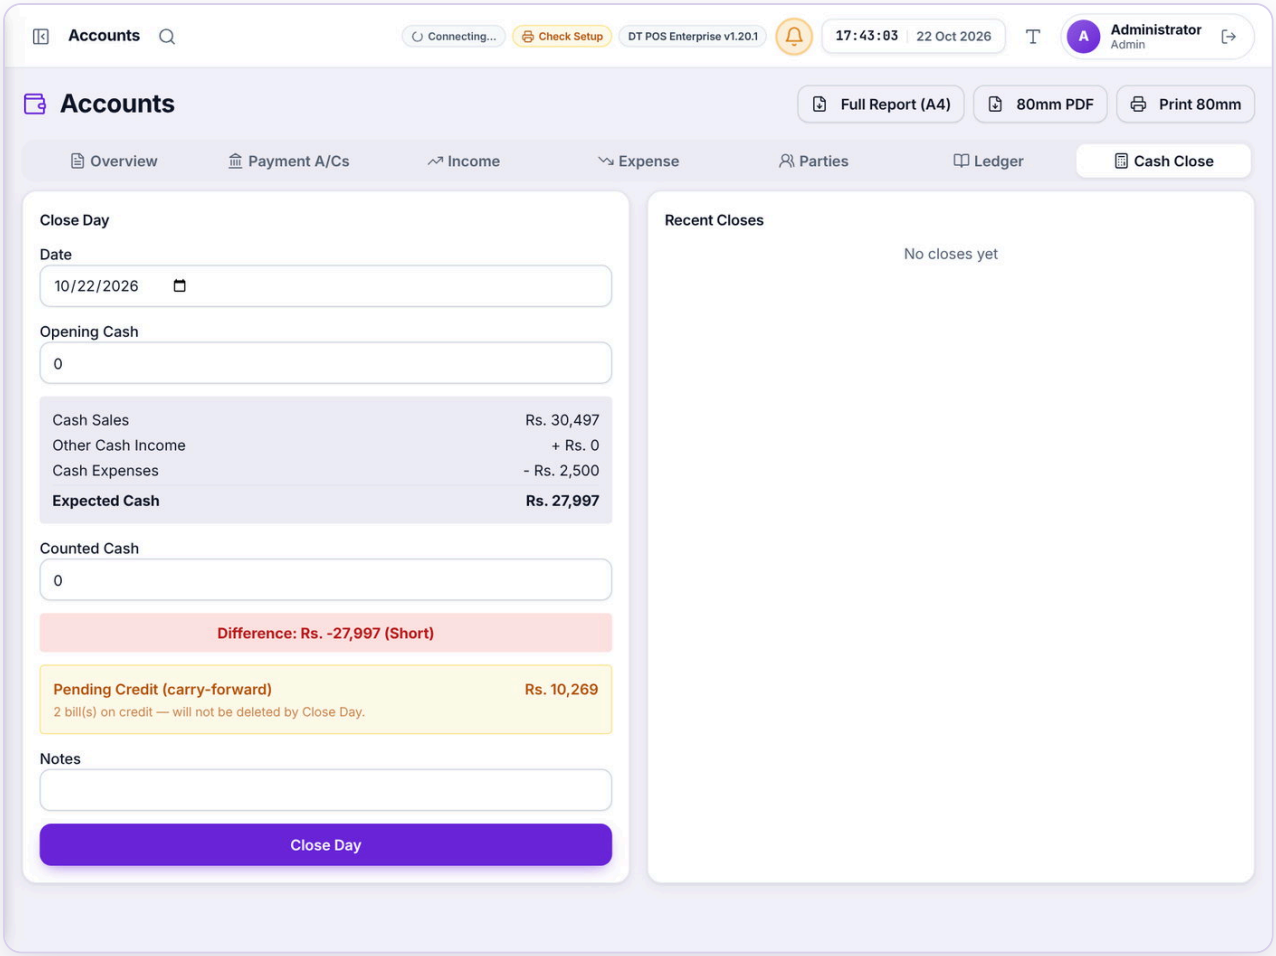

The tab shows the total for the period and each entry; the bin deletes an entry. Categories such as Rent, Electricity & Gas, Salaries and Grocery keep reports tidy.

Daily wages (14.6) are posted here as expenses automatically.

ACCOUNTS

14.4 Cash close — counting the drawer

At the end of the day, compare the cash in the drawer with what the POS expects.

1. Check the date and type the **opening cash** (the float).
2. The POS shows **cash sales**, other cash income and cash expenses, and the **expected cash**.
3. Count the drawer and type the **counted cash**. The **difference** shows at once, marked *Short*, *Excess* or *Balanced*.
4. Add a note and press **Close Day**. The count is saved under Recent Closes.

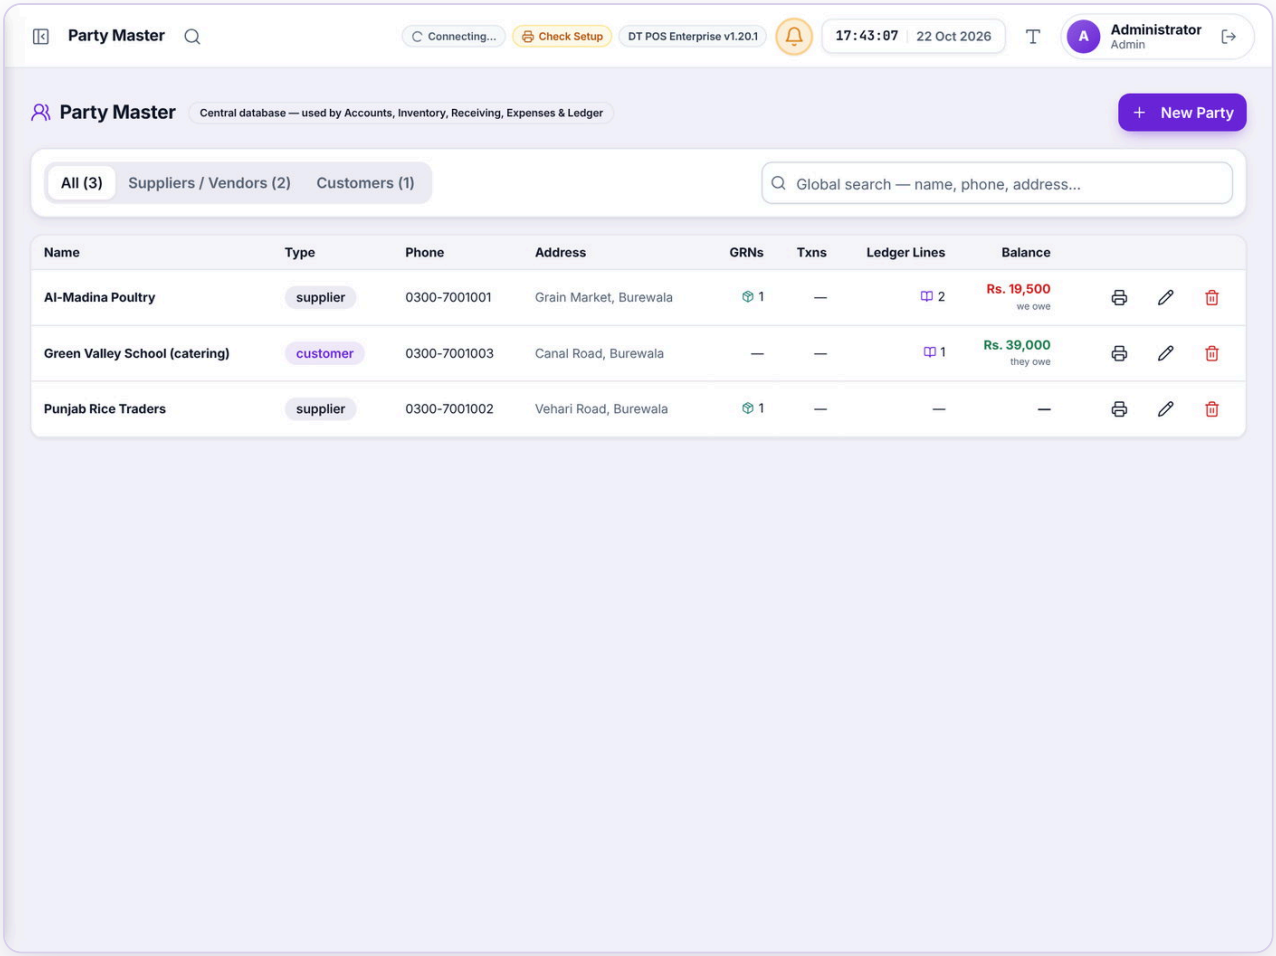

Pending credit shows bills on credit that are carried forward — they are not deleted.

> This is the cash count. The **Day Close** module (17.1) prints the shift report and clears the day's live list.

ACCOUNTS

14.5 Party master — suppliers and customers

One list of suppliers and account customers, shared by Receiving, Accounts and the ledgers.

Each party shows its phone and address, the number of goods-received notes, transactions and ledger lines, and the **balance** — *we owe* (red) or *they owe* (green).

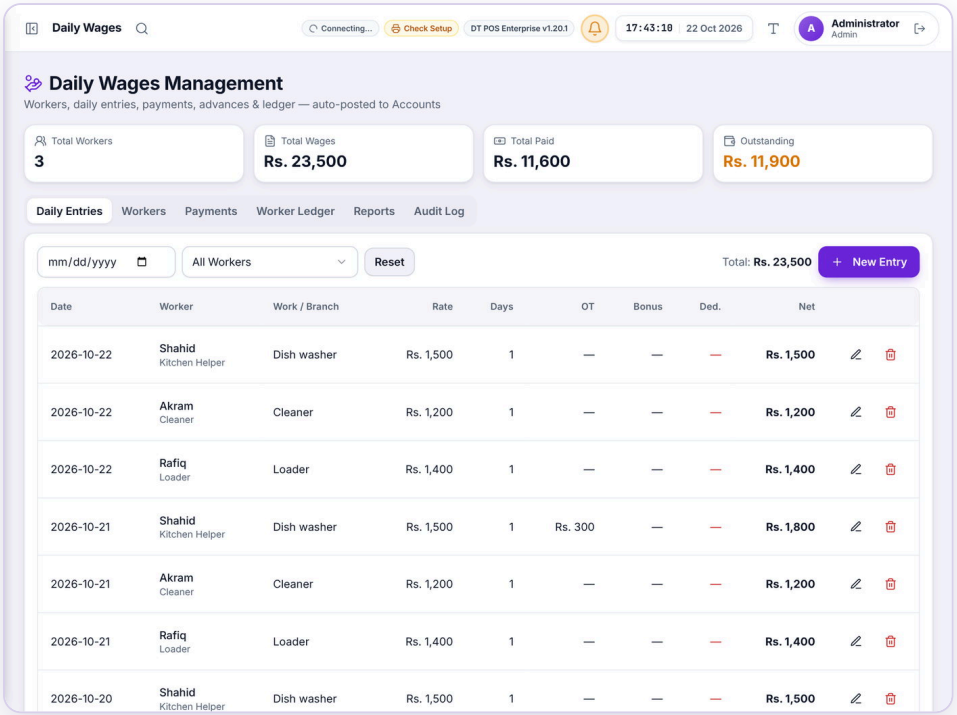

1. Press **New Party**; choose **supplier** or **customer**; enter the name, phone, address and any opening balance.
2. Record purchases in Receiving and payments in Accounts — the ledger fills itself.
3. Print a party's ledger with the printer icon.

Search across all parties by name, phone or address.

ACCOUNTS

14.6 Daily wages

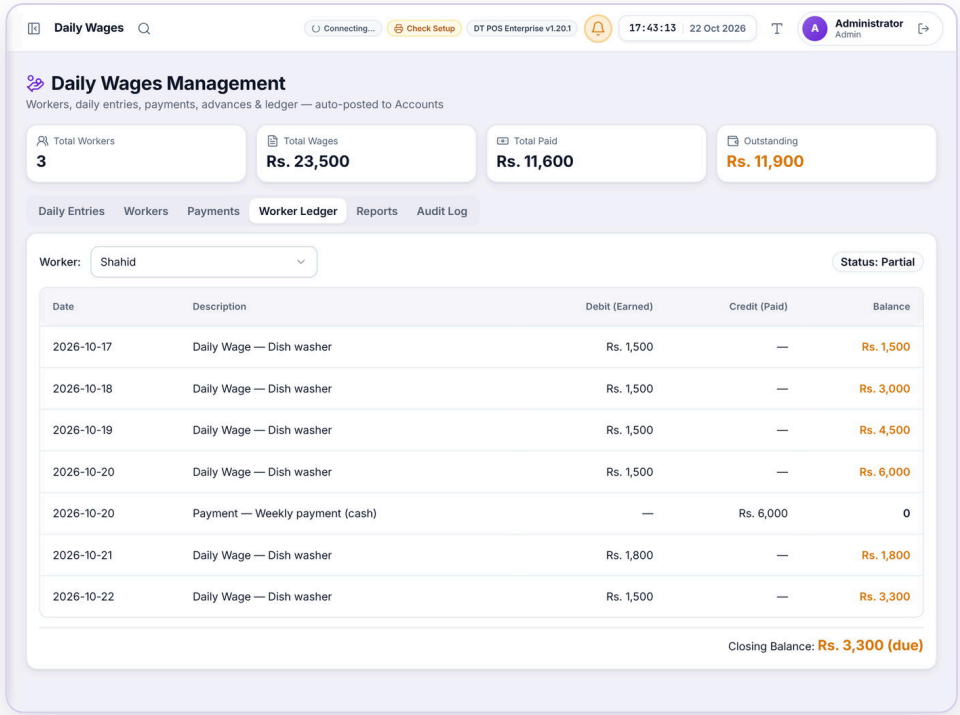

Day-rate workers — helpers, cleaners, loaders — their daily entries, payments, advances and balances.

Daily Entries

Per day and worker: the work, rate, days, overtime, bonus, deductions and net. New Entry adds a day; filter by date or worker. The counters total wages, payments and the outstanding balance.

The tabs hold **Workers**, **Payments** (and advances), **Reports** and an **Audit Log** of every change.

Worker Ledger — earned, paid and balance.

Pick a worker to see each day earned and each payment, with the running balance and the closing amount due.

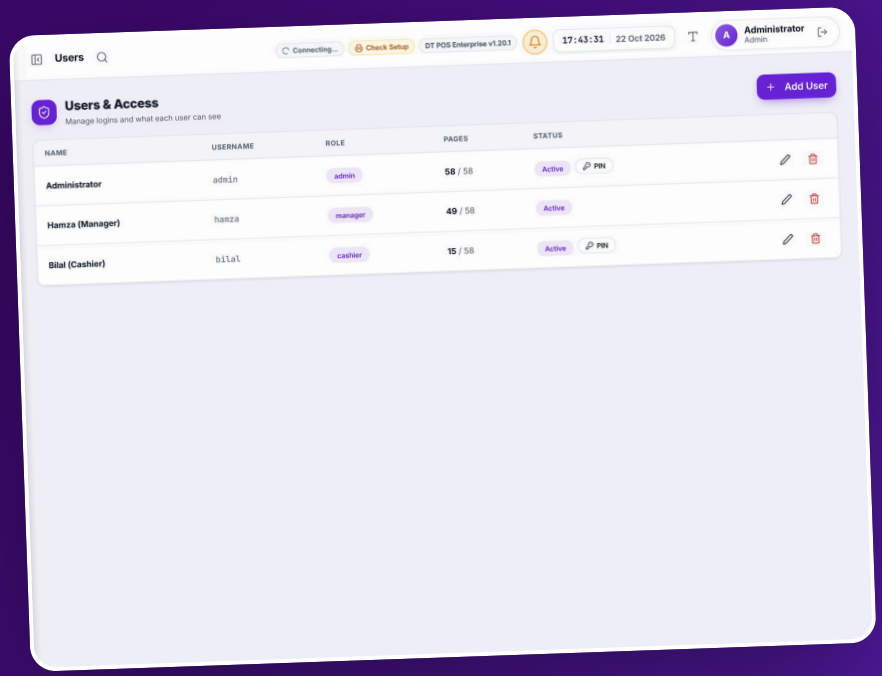

Wages and payments are posted to Accounts automatically as expenses.

15

Staff and users

Employees, attendance and payslips; waiters and riders; and the user accounts that decide who can open what.

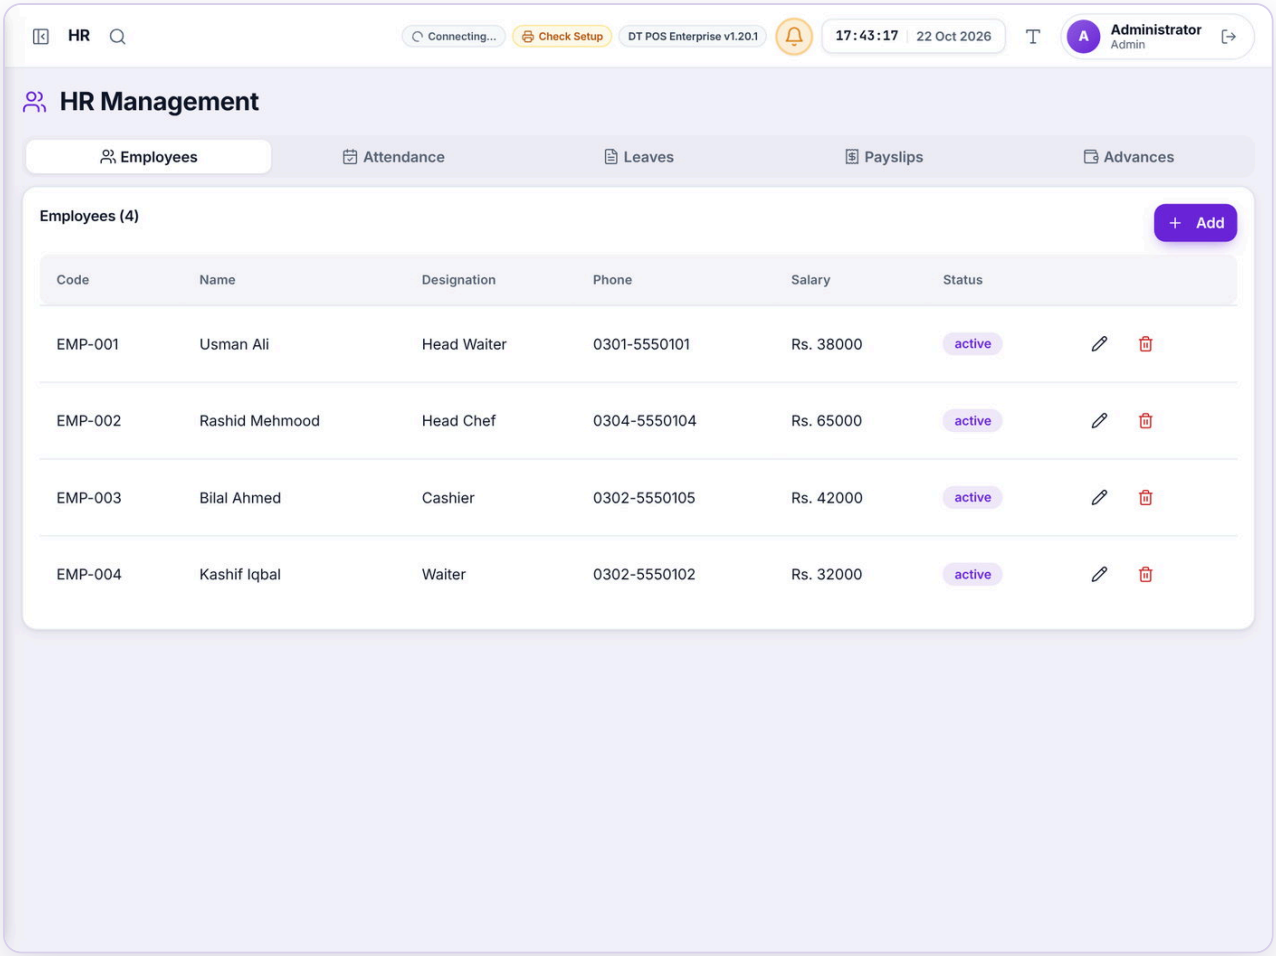

Employees	86	Users and access	89
Attendance and payslips	87	Editing a user and their permissions	90
Waiters and riders	88		

HR

15.1 Employees

The staff register: code, name, designation, phone, salary and status.

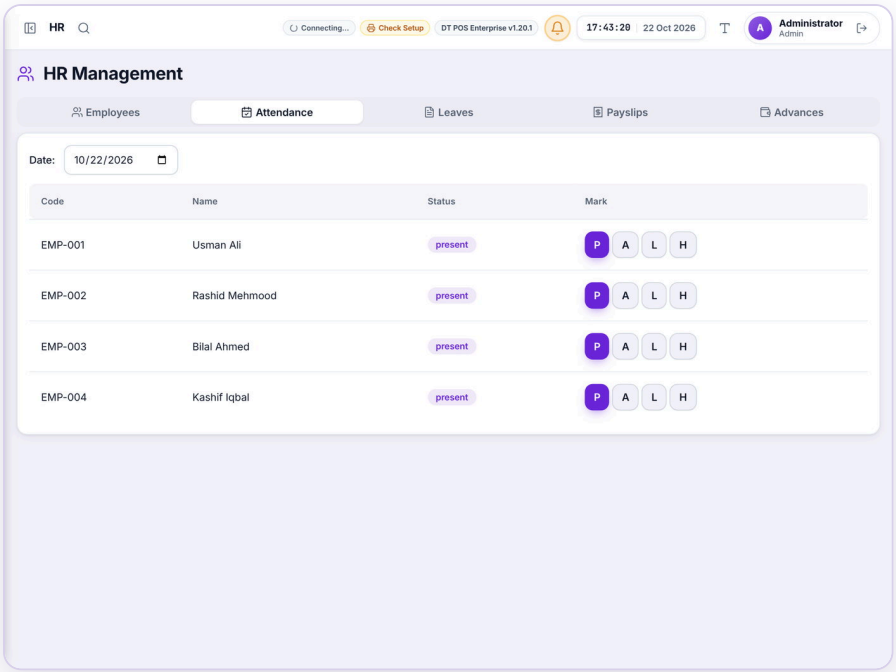

1. Press **Add**.
2. Enter the employee code, name, father's name, CNIC, phone, designation, department, joining date, basic salary, allowances, address and status.
3. Save. Edit or delete with the icons.

HR has five tabs: **Employees**, **Attendance**, **Leaves**, **Payslips** and **Advances** (next page).

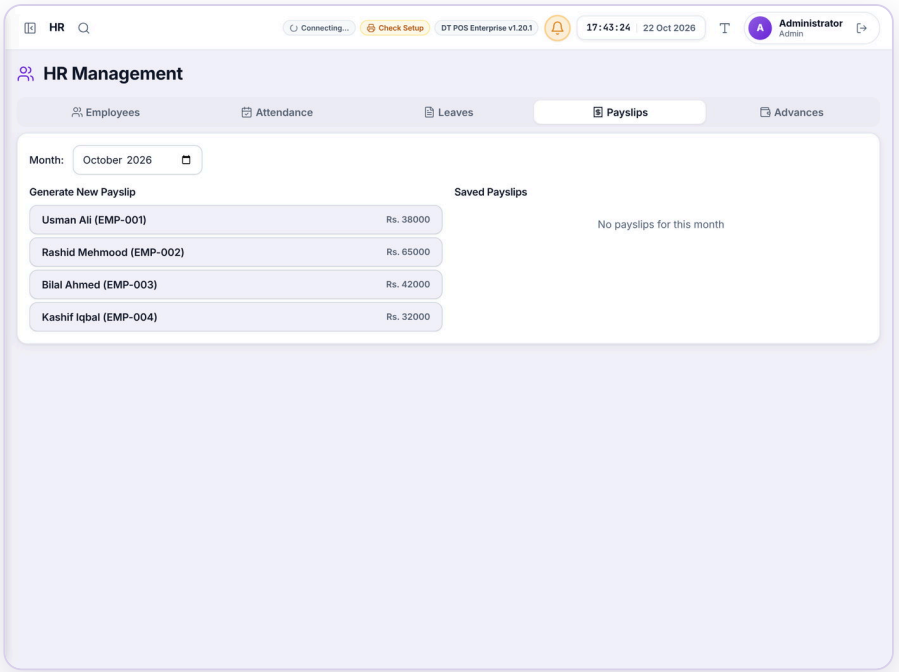

HR

15.2 Attendance and payslips

Attendance — one tap per employee.

Choose the date and mark each employee **P** present, **A** absent, **L** on leave or **H** half-day. **Leaves** records leave requests (casual, sick, annual, unpaid) and their approval.

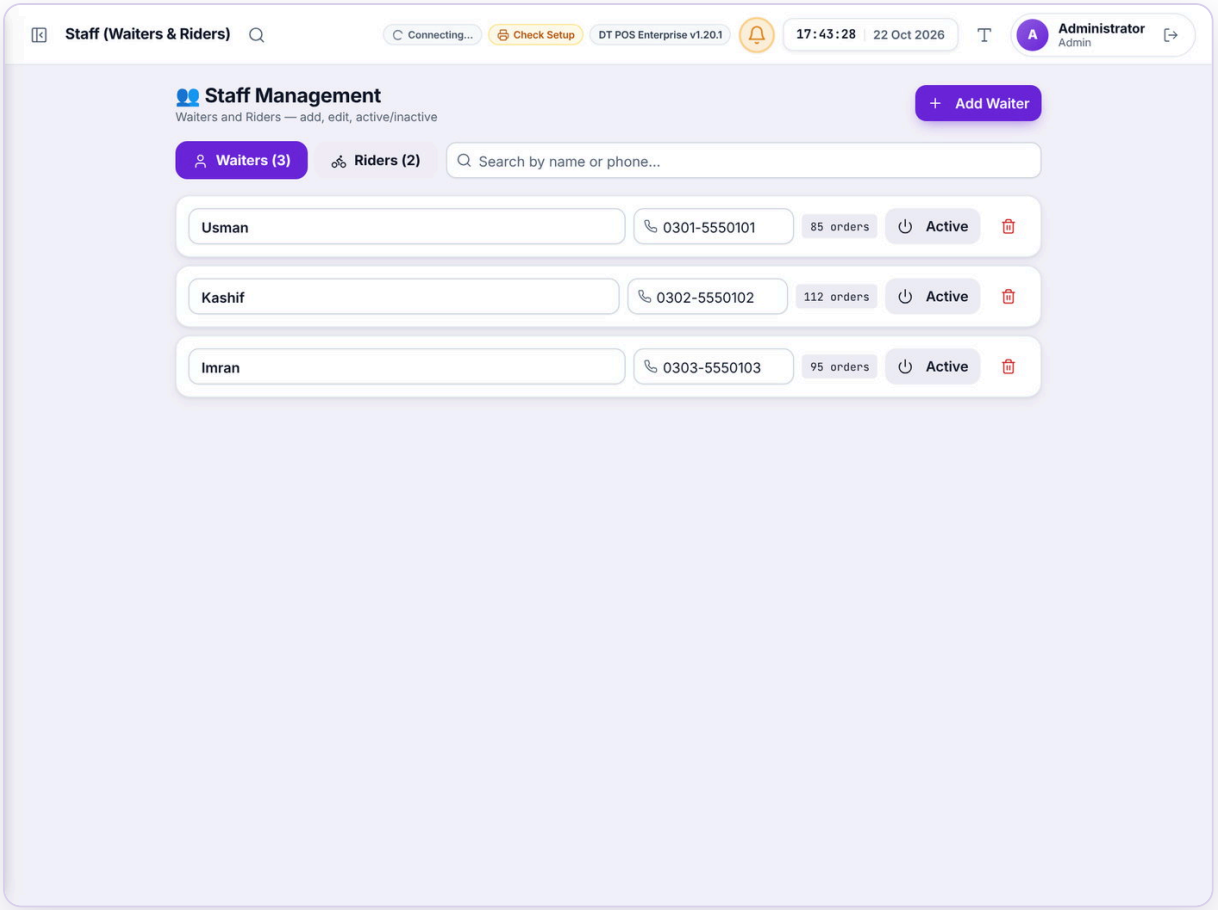

Payslips — for the chosen month.

Pick the month and an employee to generate the payslip: working, present, absent and leave days, basic salary, allowances, overtime, bonus, advance and loan deductions, and the net salary. Saved payslips are listed on the right. **Advances** records money given ahead of salary.

STAFF

15.3 Waiters and riders

The short lists the POS uses for dine-in (waiters) and delivery (riders).

- Switch between **Waiters** and **Riders**; search by name or phone.
- **Add Waiter** (or Add Rider) — name and phone.
- Each row shows how many orders the person has served or delivered.
- **Active** switches a person off without deleting their history.

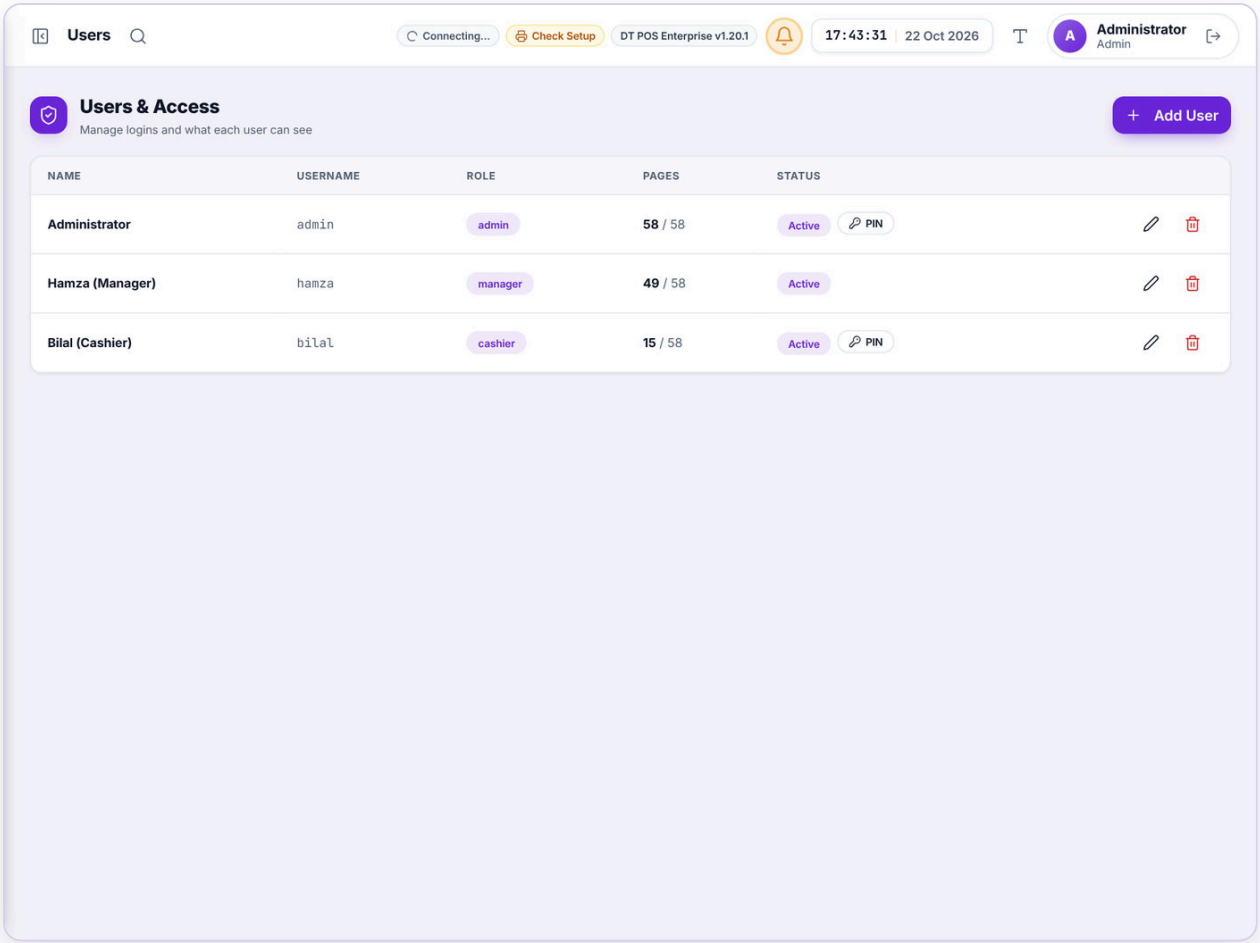

Waiters are chosen when a table is seated; riders on the delivery board (8.1).

> Waiters and riders do not sign in; they are names on the bills. People who sign in are **users** (next page).

USERS

15.4 Users and access

The people who sign in, their role, how many pages they can open, and whether they have a quick-login PIN.

1. Press **Add User**.
2. Enter the full name, username, password and role (Admin, Manager, Cashier, Order Taker or Rider).
3. Review the pages and actions ticked for the role (15.5) and save.

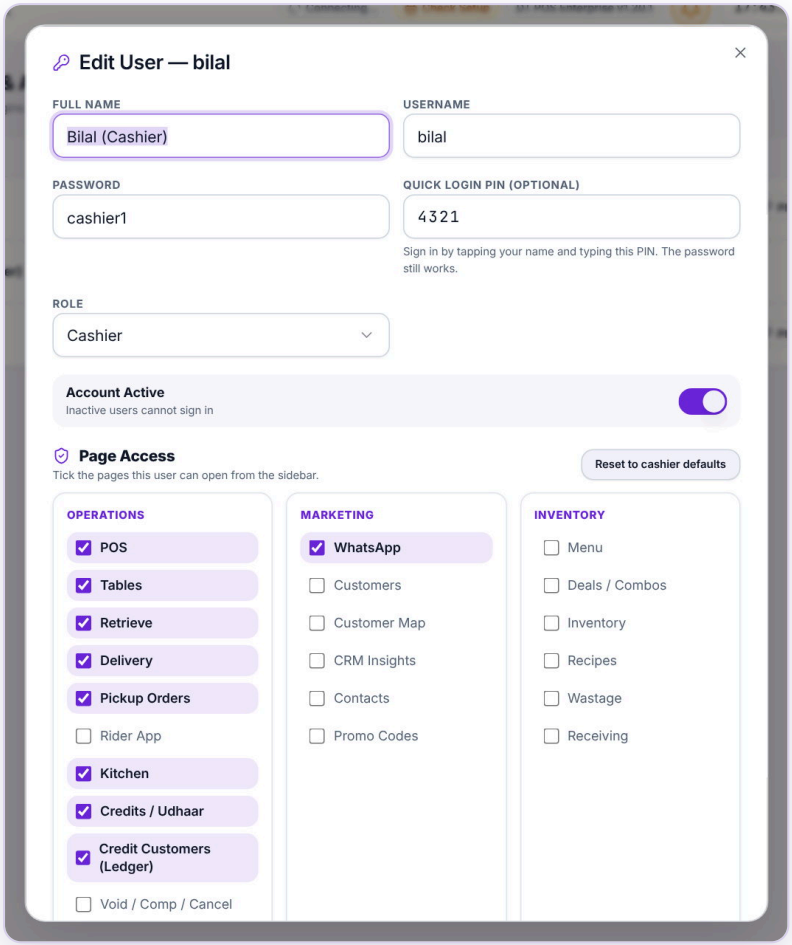

Pages shows how many of the 58 pages the user can open; **PIN** marks a quick-login PIN. The pencil edits, the bin deletes.

> **First day.** Change the password of the built-in `admin` account. In the Espresso Orange theme a red line reminds administrators until it is changed.

USERS

15.5 Editing a user and their permissions

Each user's login details, role and exactly which pages appear in their menu.

- **Full name** (printed on bills as the cashier), **username** and **password**.
- **Quick login PIN** — optional, exactly 4 digits (2.4).
- **Role** — choosing a role ticks that role's default pages and actions.
- **Account Active** — an inactive user cannot sign in; their history stays.
- **Page Access** — tick the pages this user can open, grouped as Operations, Marketing, Inventory, Accounts, Staff, Reports and Admin. **Reset to … defaults** restores the role's list.
- **Feature permissions** — Billing, Discounts, Inventory, Reports and Admin actions such as Edit Bill, Void, Refund, Apply Discount.

Order takers and riders sign in with their **phone number and a PIN** instead of a username.

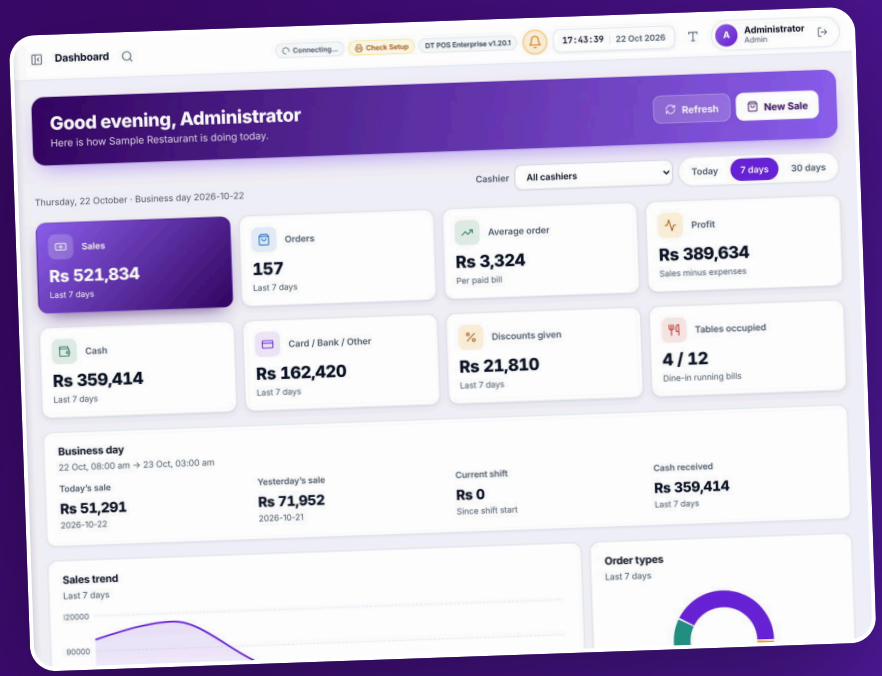

Status. In v1.20.1 the **page** ticks decide what each user can open. The **feature** (action) ticks are saved with the user, but the screens do not yet check them: within a page they can open, users can use its buttons. Discount approval is controlled separately in Settings (4.7), and Void / Comp, Bill Editor and Settings are limited to administrators and managers.

16

Dashboard and reports

How the business is doing today and over time: the dashboard, the bill and category reports, the Reports Center, item and variant analysis, profit and food cost.

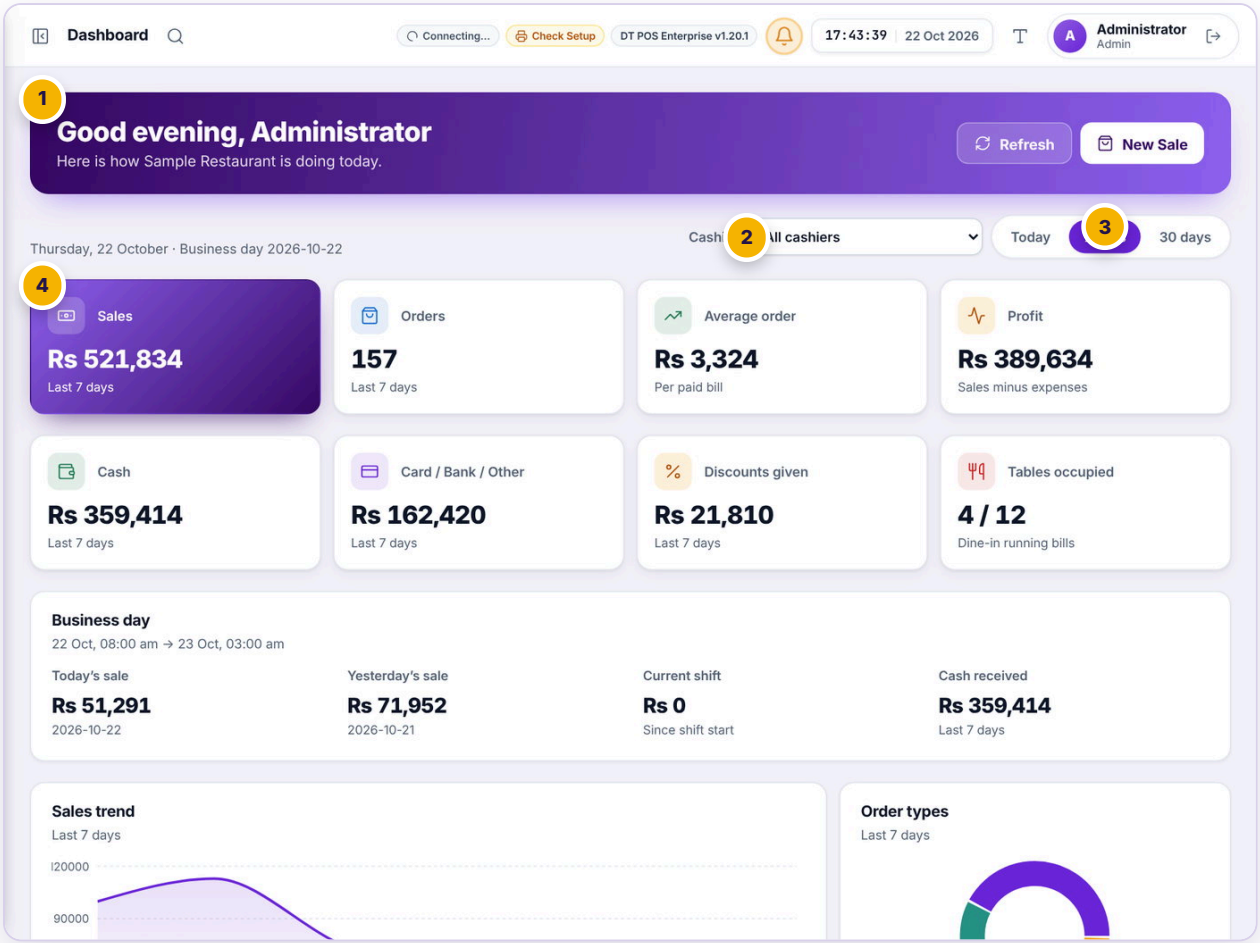

Dashboard	92
Dashboard — trends and live panels	93
Reports — bills and totals	94
Reports — cashiers and the bill list	95
Category and product wise	96
Reports Center	97
Sales report and shift report	98
Advanced item and variant reports	99
Admin sales history	100
Profitability	101
Cost reports	102
Token module	103

DASHBOARD

16.1 Dashboard

The owner's first screen: today's business and the last 7 or 30 days, on one page.

1. **Greeting** — with Refresh and New Sale (opens the POS).
2. **Cashier** — all cashiers or one.
3. **Period** — Today, 7 days or 30 days.
4. **Key figures** — sales, orders, average order, profit (sales minus expenses), cash, card / bank / other, discounts given and tables occupied.

BUSINESS DAY

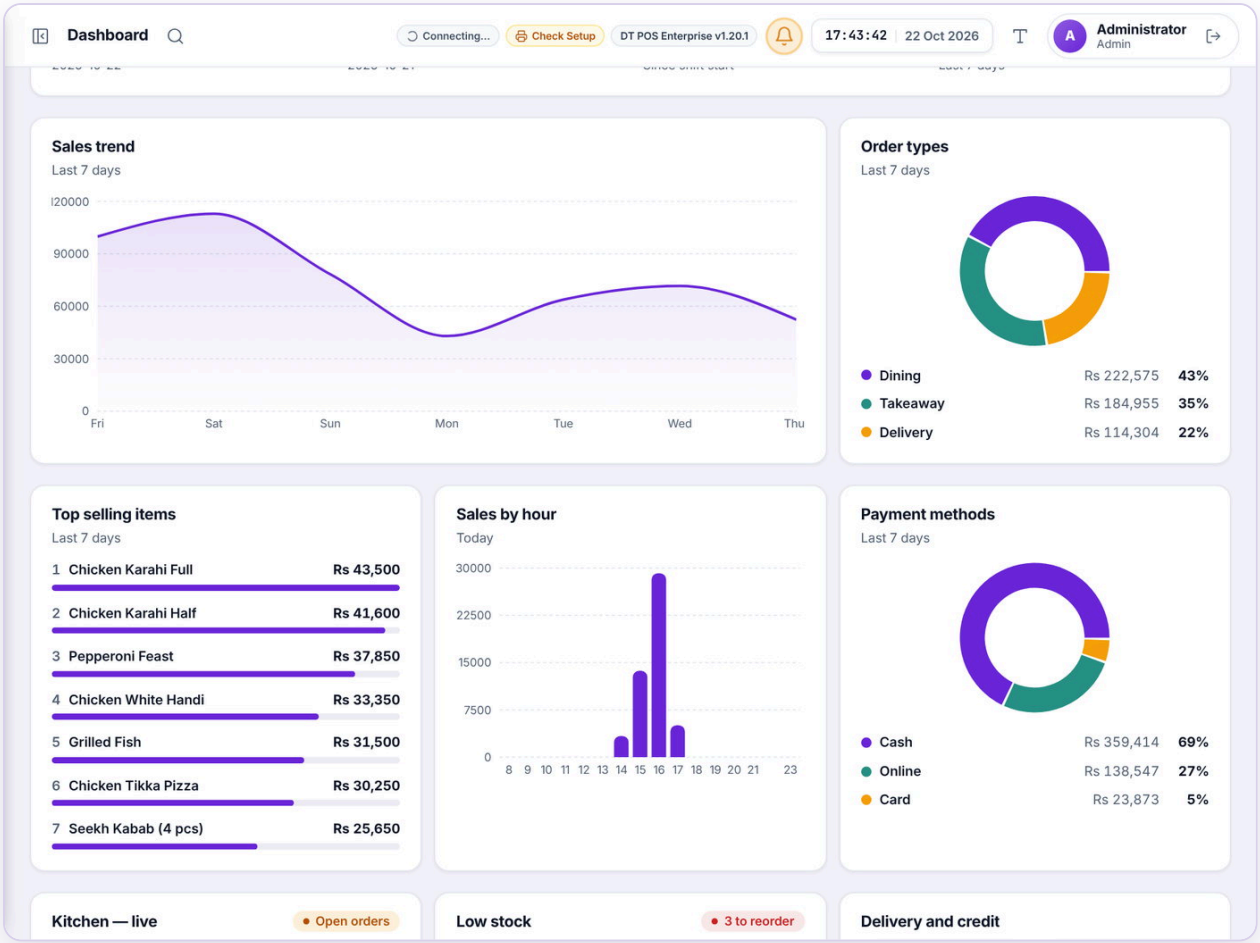

The **Business day** card shows the day's window (e.g. 08:00 → 03:00 the next morning), today's and yesterday's sale, the current shift since its start, and cash received. Late-night bills therefore count in the right day.

The day's start time is set in **Settings → KOT Settings → Business day start** (08:00 by default); every report uses the same window.

DASHBOARD

16.2 Dashboard — trends and live panels

Further down the dashboard: where the sales come from and what needs attention now.

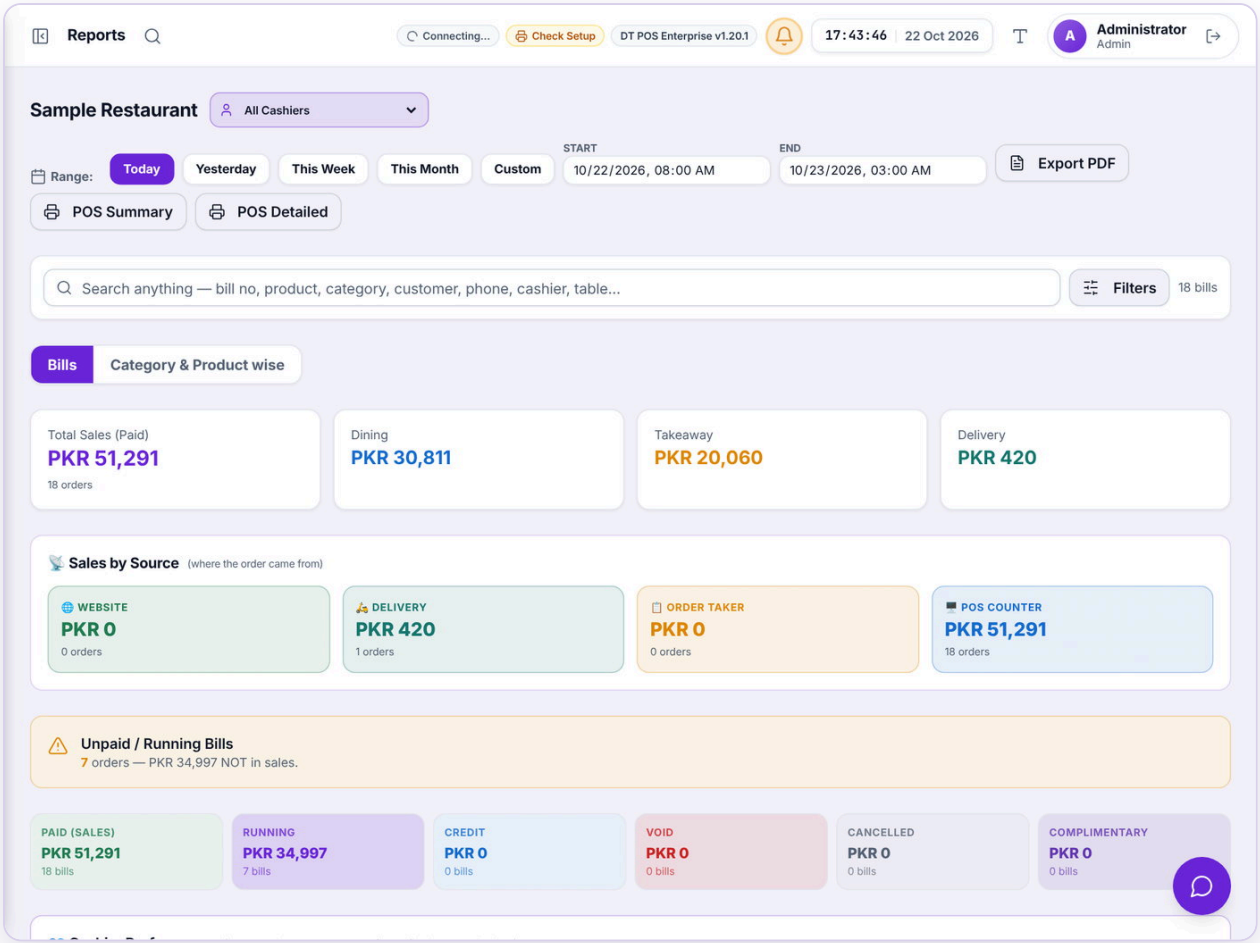

- **Sales trend** — sales per day for the period.
- **Order types** — dine-in, takeaway and delivery, by amount and share.
- **Top selling items** — the best sellers by amount.
- **Sales by hour** — today's busy hours.
- **Payment methods** — cash, online and card.
- **Kitchen — live** — open kitchen orders.
- **Low stock** — items to reorder.
- **Delivery and credit** — open deliveries and outstanding credit.

REPORTS

16.3 Reports — bills and totals

The main sales report: every bill in the period, totals by order type and source, and the status of unpaid bills.

1. Pick **Today**, **Yesterday**, **This Week**, **This Month** or **Custom** — the start and end follow the business day (e.g. 08:00 to 03:00).
2. Optionally choose one cashier, search for anything — bill, product, category, customer, phone, table — or open **Filters**.
3. Read the totals: paid sales, dining, takeaway, delivery, and **Sales by Source** (POS counter, order taker, website, delivery).

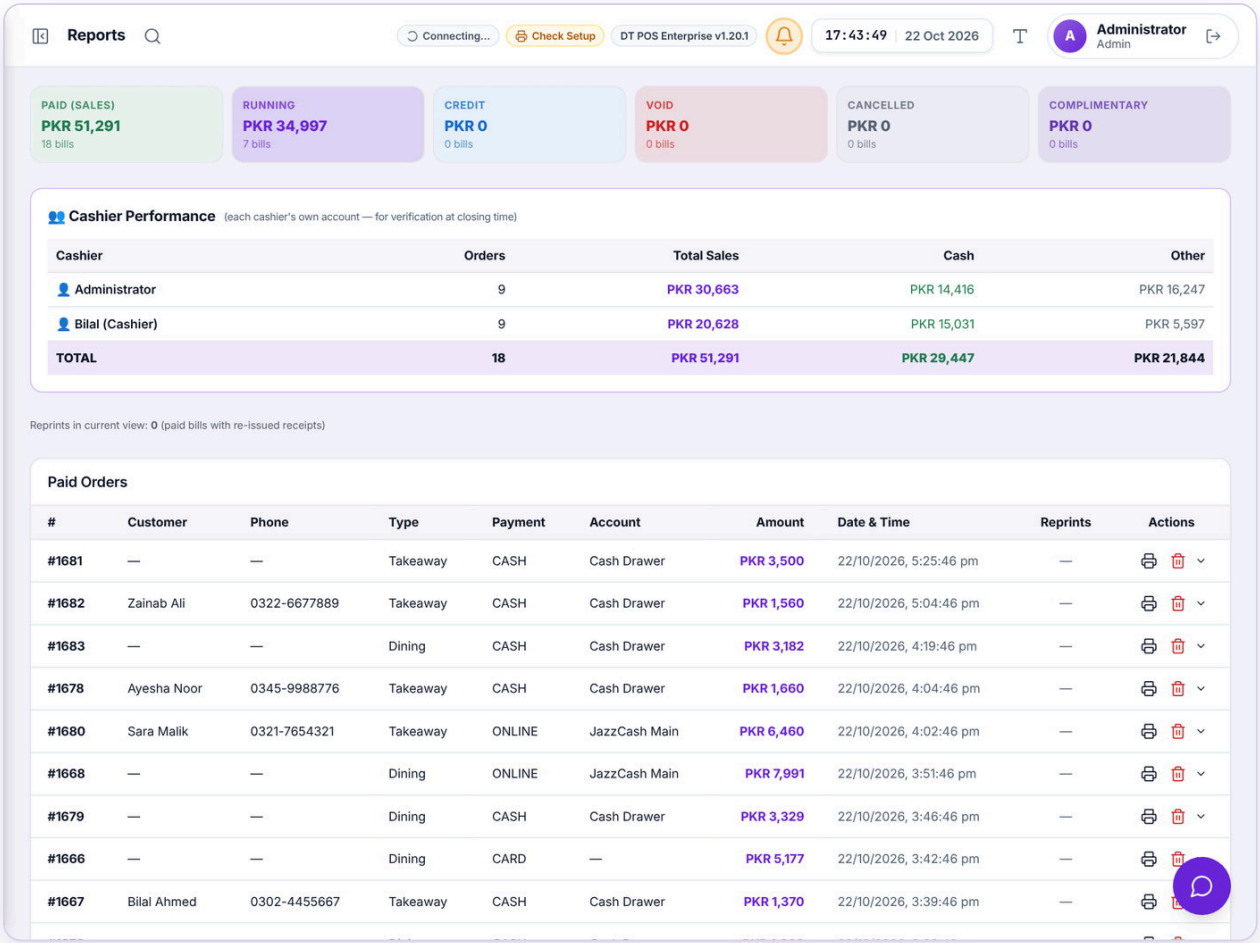

The warning card lists **unpaid / running bills** that are not in sales yet. The coloured tiles total paid, running, credit, void, cancelled and complimentary bills.

Export PDF saves the report; **POS Summary** and **POS Detailed** print it on the receipt printer.

REPORTS

16.4 Reports — cashiers and the bill list

Further down the same report: what each cashier took, and every paid bill.

CASHIER PERFORMANCE

Orders, total, cash and other payments per cashier, with a total row — for checking each drawer at closing time.

PAID ORDERS

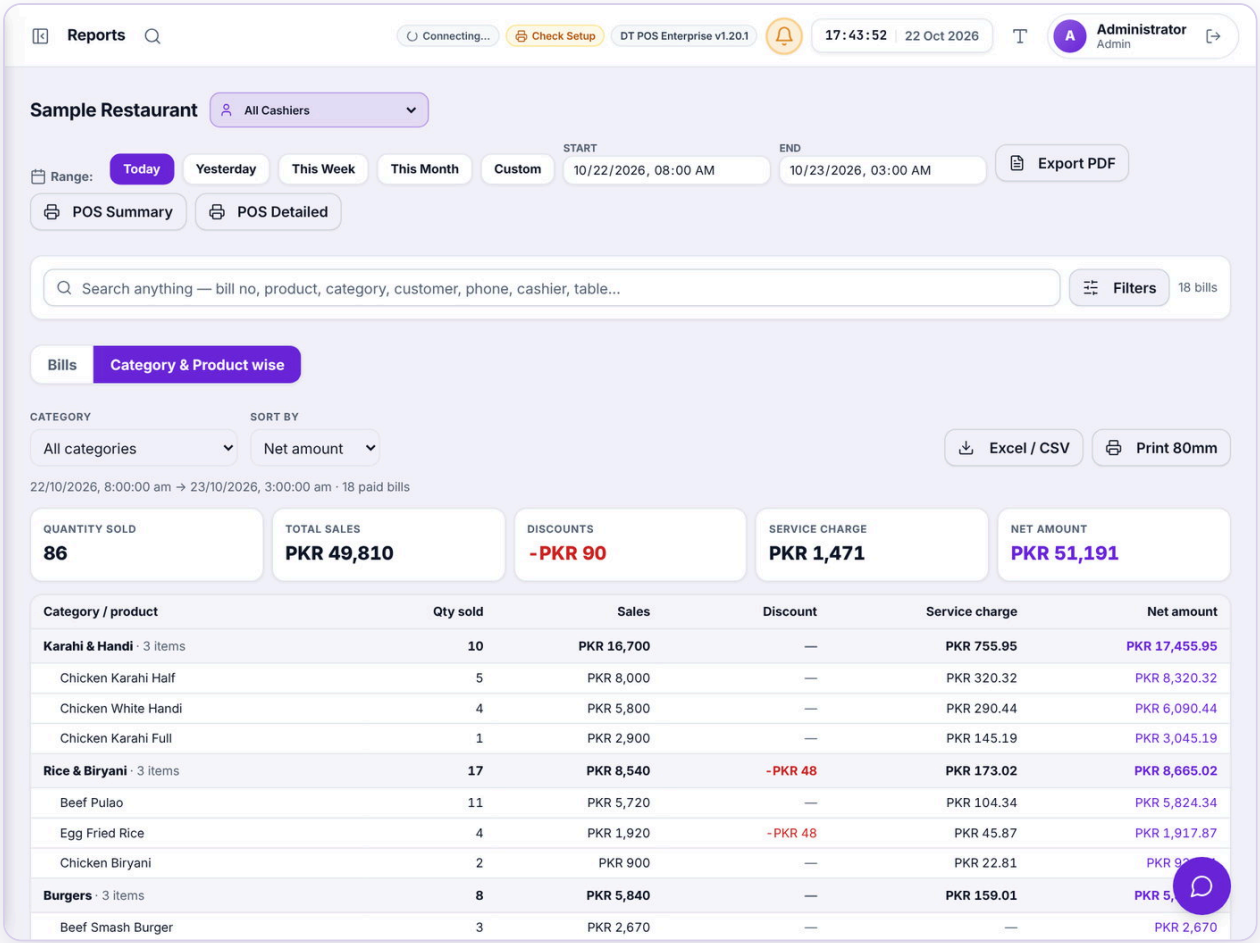

Bill number, customer, phone, type, payment method and account, amount, date and time, and the number of reprints. The icons print a bill again, and the arrow opens its details.

> **Tip.** The number of reprints in the period is shown above the list. Many reprints of the same bill are worth a question.

REPORTS

16.5 Category and product wise

The same period by category and by product: quantity sold, sales, discounts, service charge and the net amount.

1. In Reports, choose **Category & Product wise**.
2. Show all categories or one; sort by net amount, quantity sold, sales or name.
3. Each category row is followed by its products.

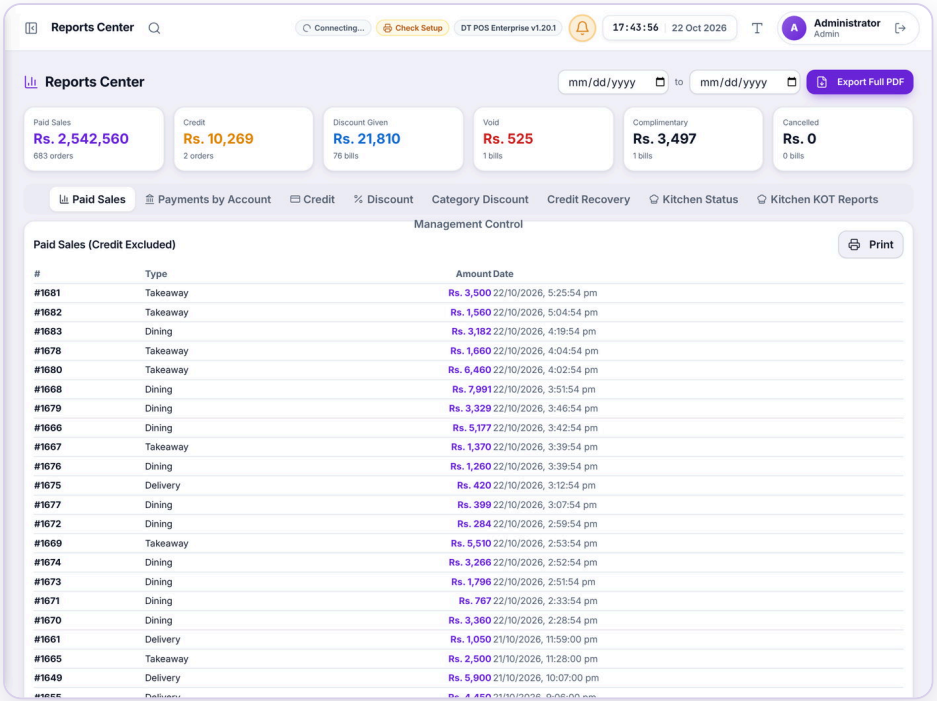

The cards total the quantity sold, sales, discounts, service charge and net amount. Discounts and service charge are shared out over the items of each bill, so the net amounts add up to the bills.

Excel / CSV exports the table; **Print 80mm** prints it.

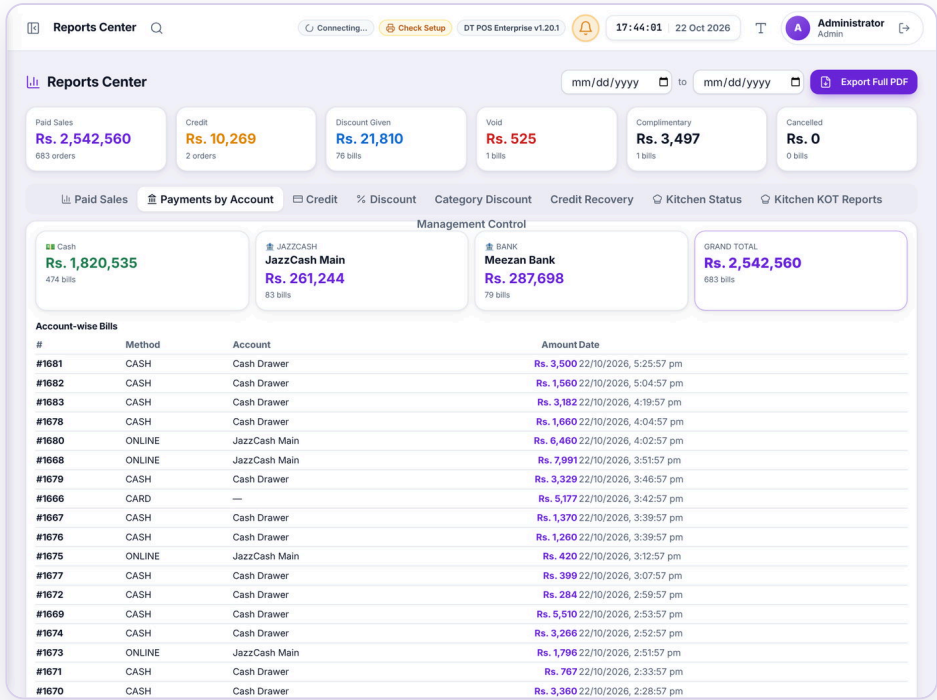

REPORTS CENTER

16.6 Reports Center

Management reports in one place, with a full PDF export. Pick the dates, then a tab.

Paid Sales tab, with the summary cards.

Payments by Account — cash drawer, JazzCash, bank.

Cards: paid sales, credit, discount given, void, complimentary and cancelled. Tabs: **Paid Sales**, **Payments by Account**, **Credit**, **Discount**, **Category Discount**, **Credit Recovery**, **Kitchen Status**, **Kitchen KOT Reports** and **Management Control**. Each tab prints; Export Full PDF saves them all.

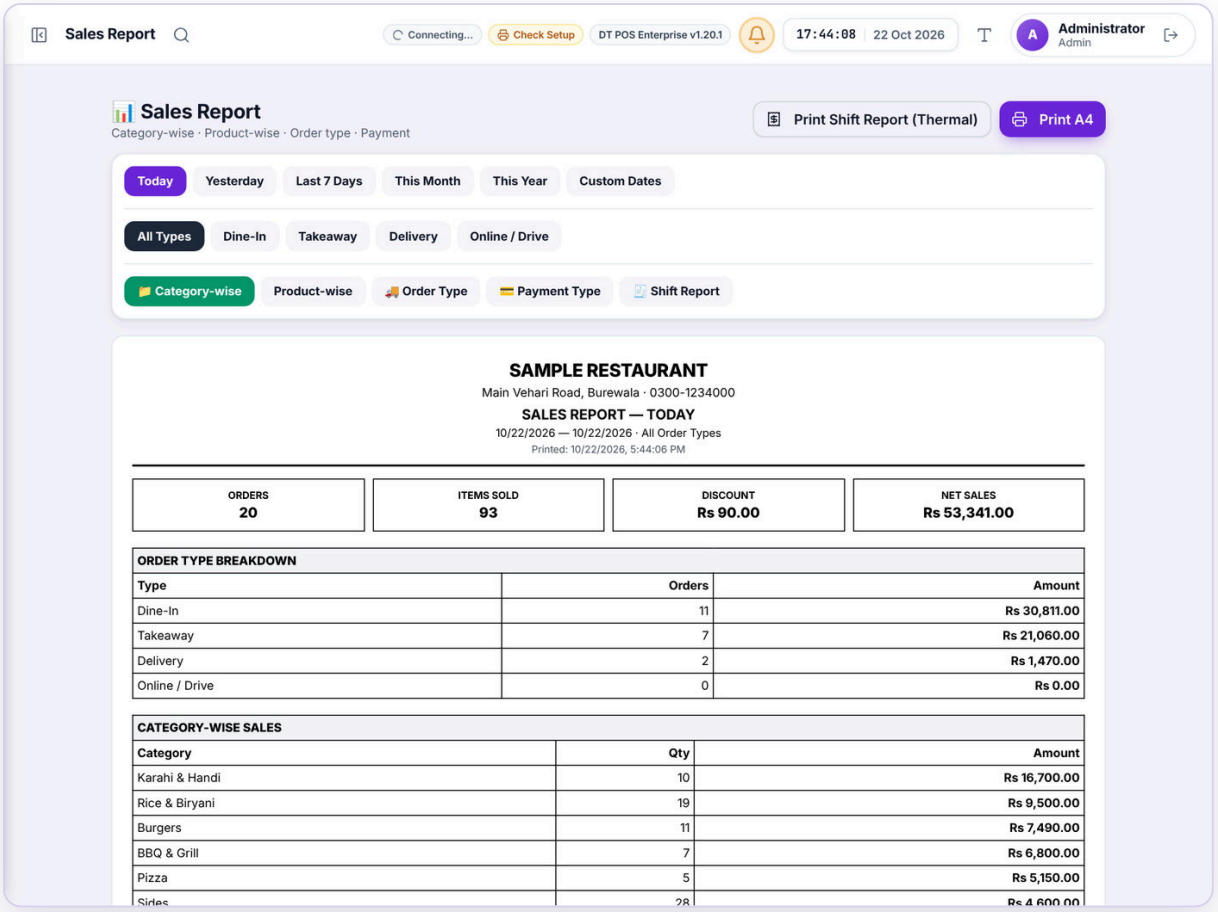

Totals per payment account with the number of bills, then every bill with its method and account — check it against the bank or wallet statement.

Kitchen KOT Reports list each order's KOTs, items added and cancelled after the first KOT, and preparation and serving minutes.

REPORTS

16.7 Sales report and shift report

A printable sales report by category, product, order type or payment — and the shift report for the thermal printer.

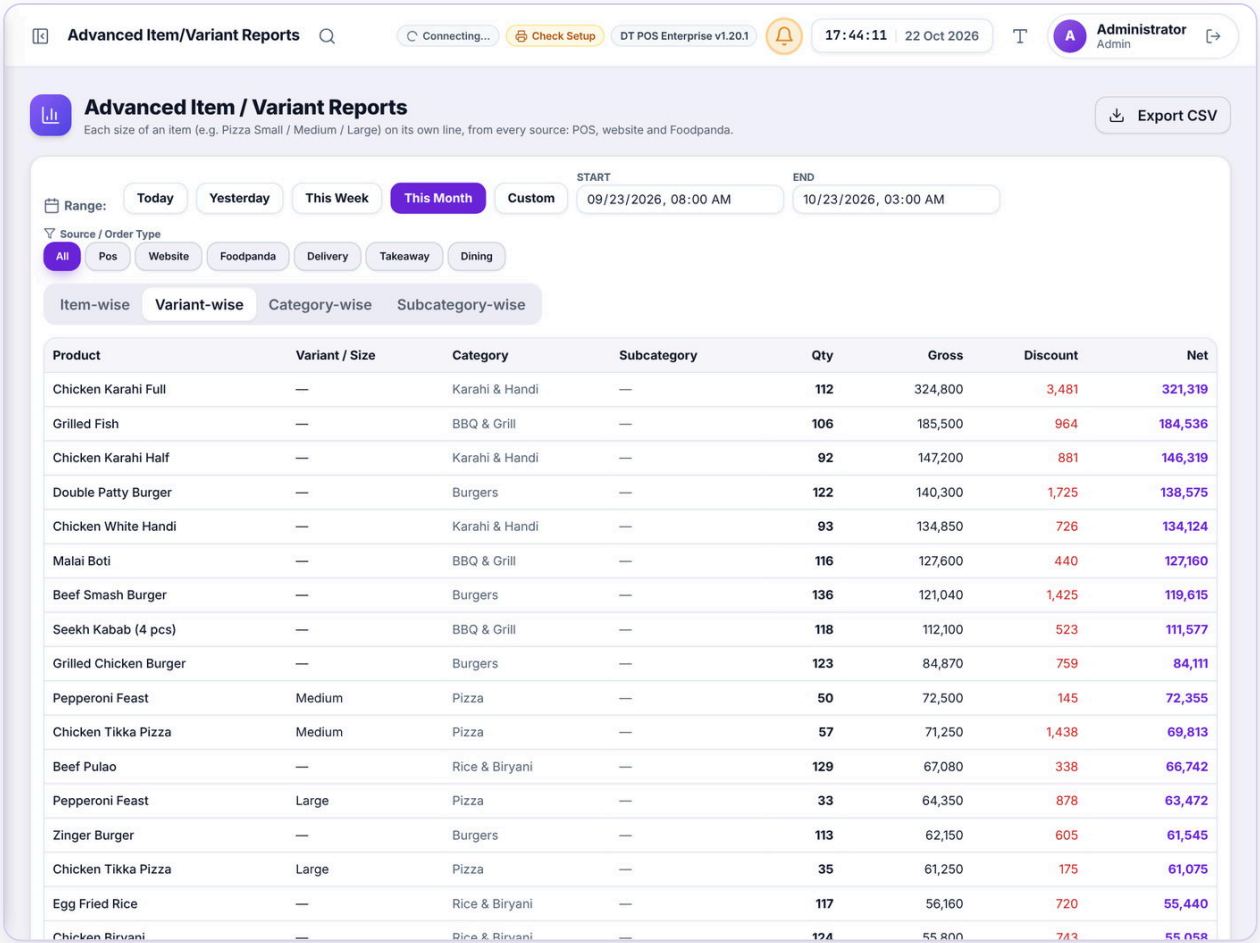

1. Choose the period: Today, Yesterday, Last 7 Days, This Month, This Year or Custom Dates.
2. Choose the order types: All, Dine-In, Takeaway, Delivery or Online / Drive.
3. Choose the view: **Category-wise**, **Product-wise**, **Order Type**, **Payment Type** or **Shift Report**.
4. Print A4 or Print Shift Report (Thermal).

The report heads with the restaurant name, address and period, then orders, items sold, discount and net sales, followed by the chosen breakdown.

REPORTS

16.8 Advanced item and variant reports

What sold, size by size: every product and variant with quantity, gross, discount and net — from every source.

Product	Variant / Size	Category	Subcategory	Qty	Gross	Discount	Net
Chicken Karahi Full	—	Karahi & Handi	—	112	324,800	3,481	321,319
Grilled Fish	—	BBQ & Grill	—	106	185,500	964	184,536
Chicken Karahi Half	—	Karahi & Handi	—	92	147,200	881	146,319
Double Patty Burger	—	Burgers	—	122	140,300	1,725	138,575
Chicken White Handi	—	Karahi & Handi	—	93	134,850	726	134,124
Malai Boti	—	BBQ & Grill	—	116	127,600	440	127,160
Beef Smash Burger	—	Burgers	—	136	121,040	1,425	119,615
Seekh Kabab (4 pcs)	—	BBQ & Grill	—	118	112,100	523	111,577
Grilled Chicken Burger	—	Burgers	—	123	84,870	759	84,111
Pepperoni Feast	Medium	Pizza	—	50	72,500	145	72,355
Chicken Tikka Pizza	Medium	Pizza	—	57	71,250	1,438	69,813
Beef Pulao	—	Rice & Biryani	—	129	67,080	338	66,742
Pepperoni Feast	Large	Pizza	—	33	64,350	878	63,472
Zinger Burger	—	Burgers	—	113	62,150	605	61,545
Chicken Tikka Pizza	Large	Pizza	—	35	61,250	175	61,075
Egg Fried Rice	—	Rice & Biryani	—	117	56,160	720	55,440
Chicken Biryani	—	Rice & Biryani	—	124	55,800	743	55,058

- Choose the period and the source: All, POS, Website, Foodpanda, Delivery, Takeaway or Dining.
- Group **Item-wise**, **Variant-wise** (each size on its own line), **Category-wise** or **Subcategory-wise**.
- **Export CSV** for a spreadsheet.

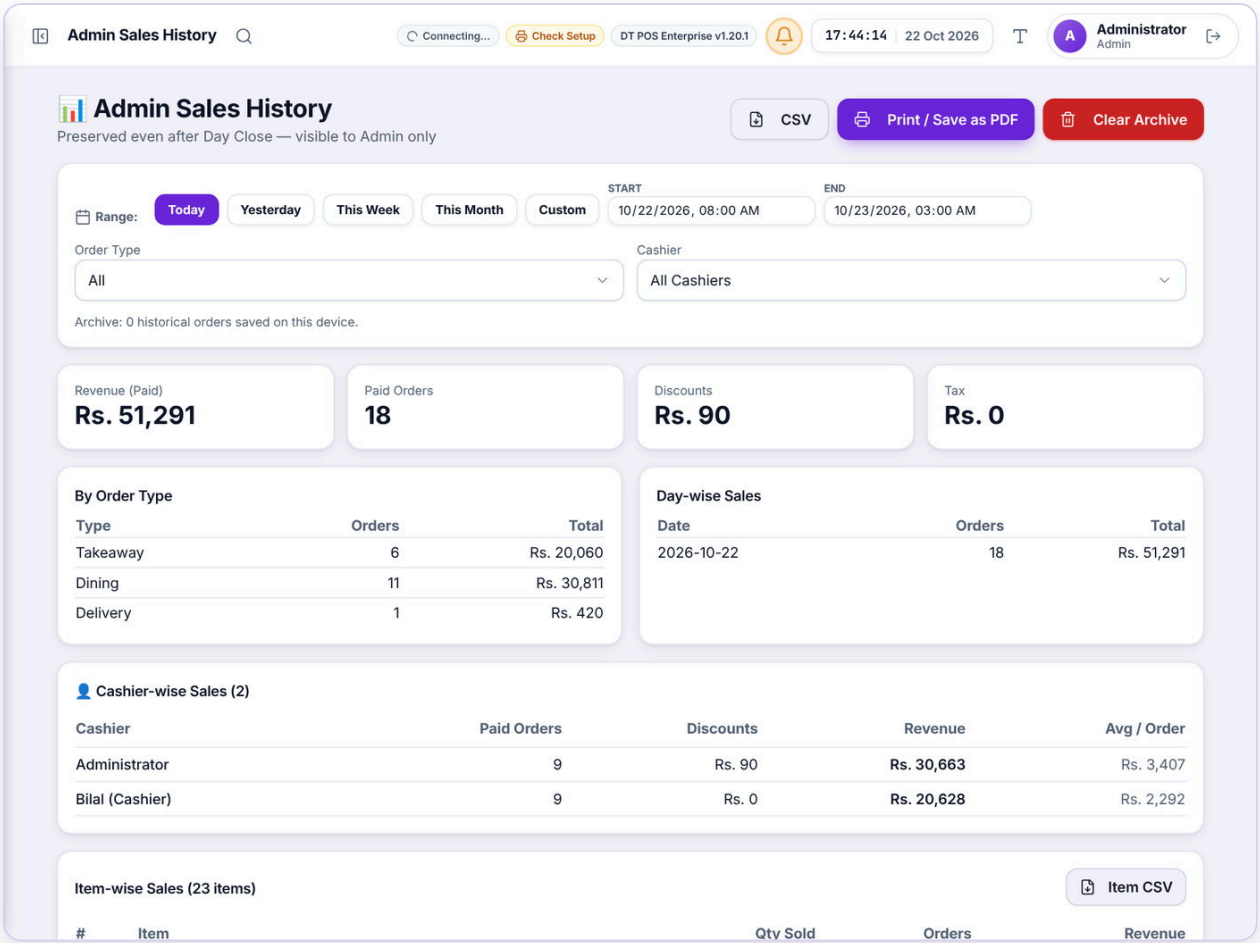

Use it to see which pizza size sells best, or which flavours to drop.

Administrators and managers.

REPORTS

16.9 Admin sales history

Sales kept permanently — even after Day Close or Reset Sale — for the administrator.

Every bill closed by a Day Close is copied to this archive first, so past periods can always be reported.

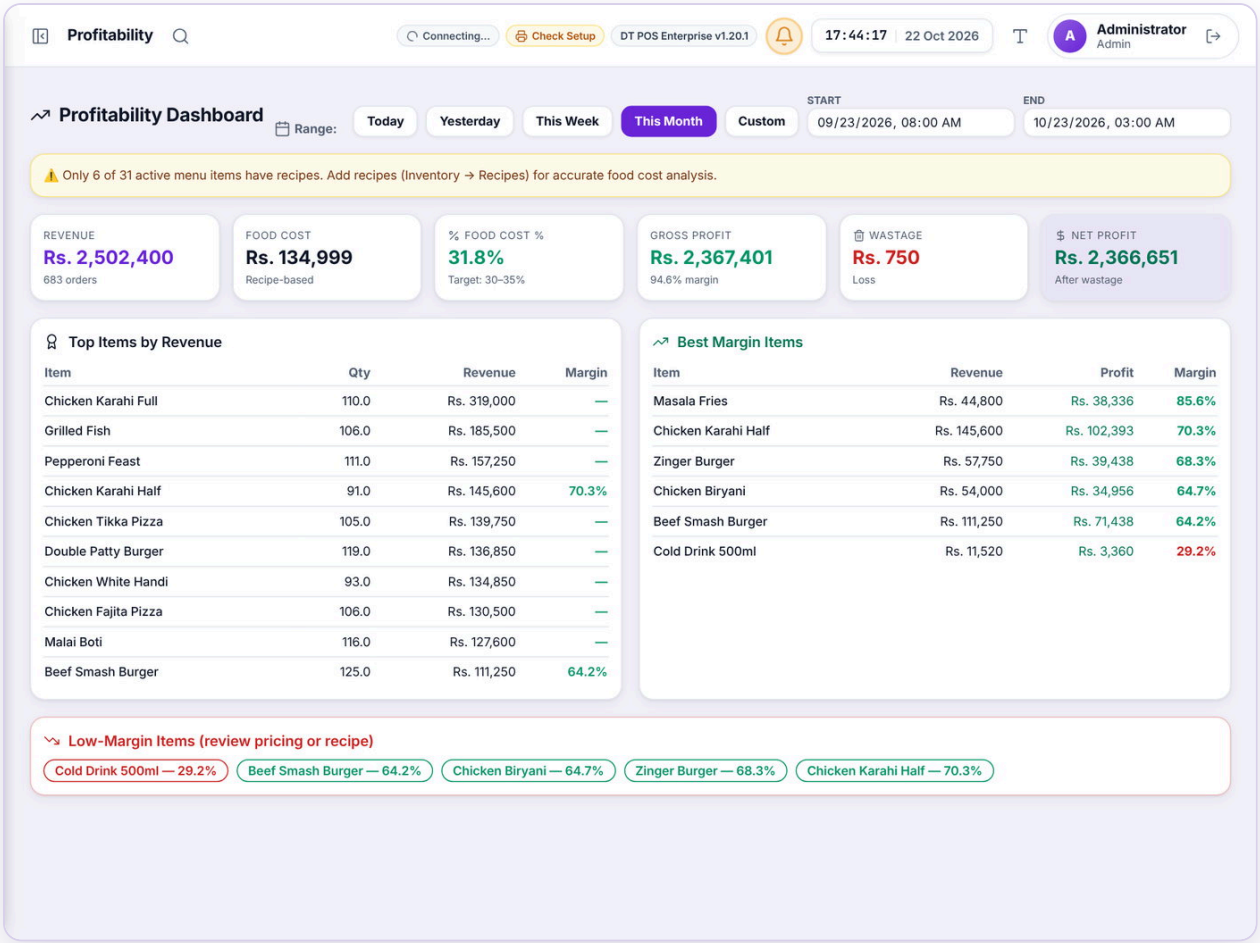

- Filter by period, order type and cashier.
- Revenue, paid orders, discounts and tax; by order type; day-wise; cashier-wise; and item-wise sales.
- **CSV**, **Item CSV** and **Print / Save as PDF**.

Take care. Clear Archive deletes this history permanently. Export it first.

PROFIT

16.10 Profitability

Revenue against food cost and wastage: gross and net profit, and the items that earn — or lose — the most.

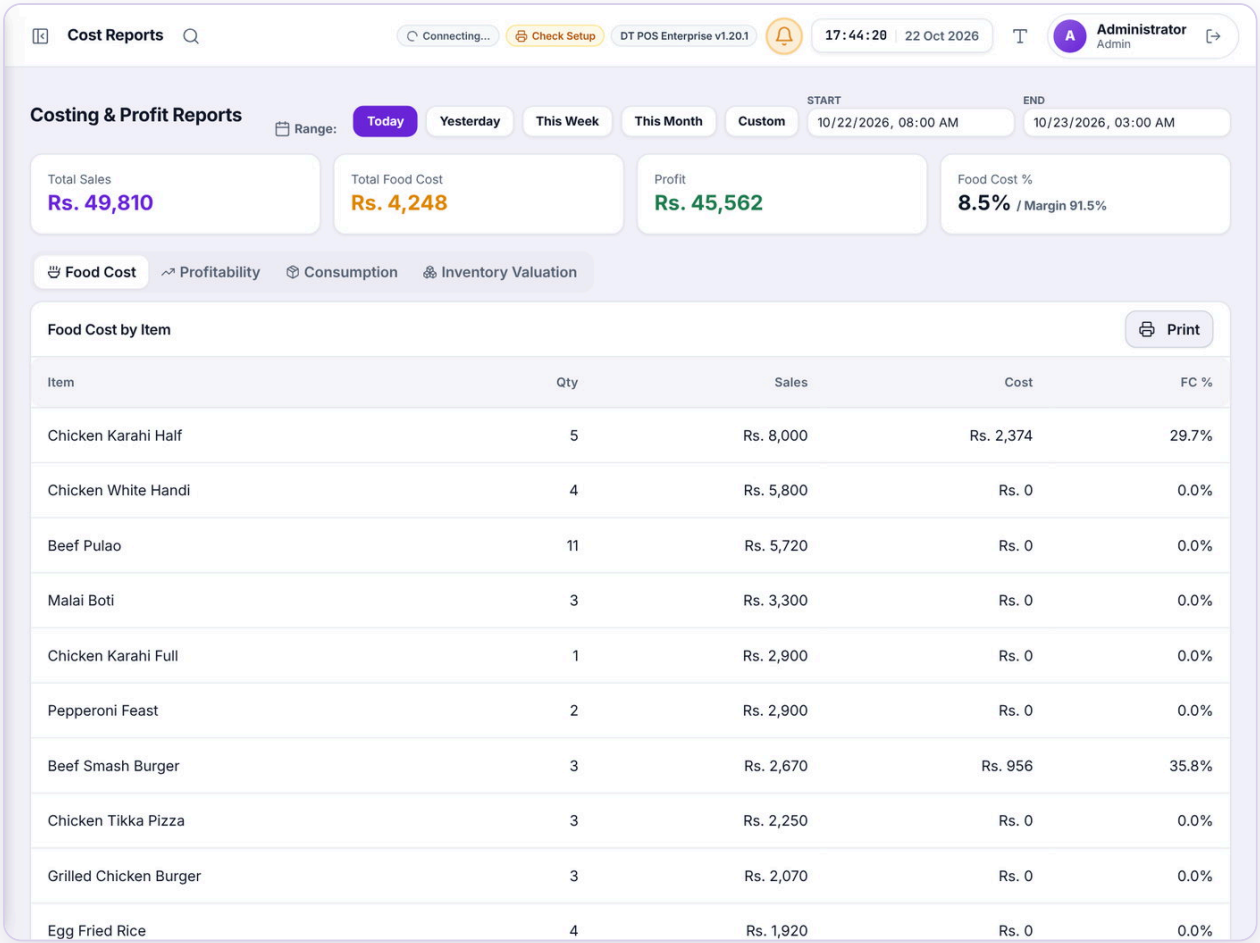

- **Revenue**, **food cost** (from recipes), **food cost %** against a 30–35% target, **gross profit**, **wastage** and **net profit**.
- **Top items by revenue** and **best margin items**.
- **Low-margin items** — review their price or recipe.

Accuracy. The yellow line says how many active items have recipes. Items without a recipe count as no cost, which makes profit look higher than it is.

PROFIT

16.11 Cost reports

Food cost per item for the period, and the stock side of costing.

Item	Qty	Sales	Cost	FC %
Chicken Karahi Half	5	Rs. 8,000	Rs. 2,374	29.7%
Chicken White Handi	4	Rs. 5,800	Rs. 0	0.0%
Beef Pulao	11	Rs. 5,720	Rs. 0	0.0%
Malai Boti	3	Rs. 3,300	Rs. 0	0.0%
Chicken Karahi Full	1	Rs. 2,900	Rs. 0	0.0%
Pepperoni Feast	2	Rs. 2,900	Rs. 0	0.0%
Beef Smash Burger	3	Rs. 2,670	Rs. 956	35.8%
Chicken Tikka Pizza	3	Rs. 2,250	Rs. 0	0.0%
Grilled Chicken Burger	3	Rs. 2,070	Rs. 0	0.0%
Egg Fried Rice	4	Rs. 1,920	Rs. 0	0.0%

Totals: sales, food cost, profit and food cost % with the margin. Tabs:

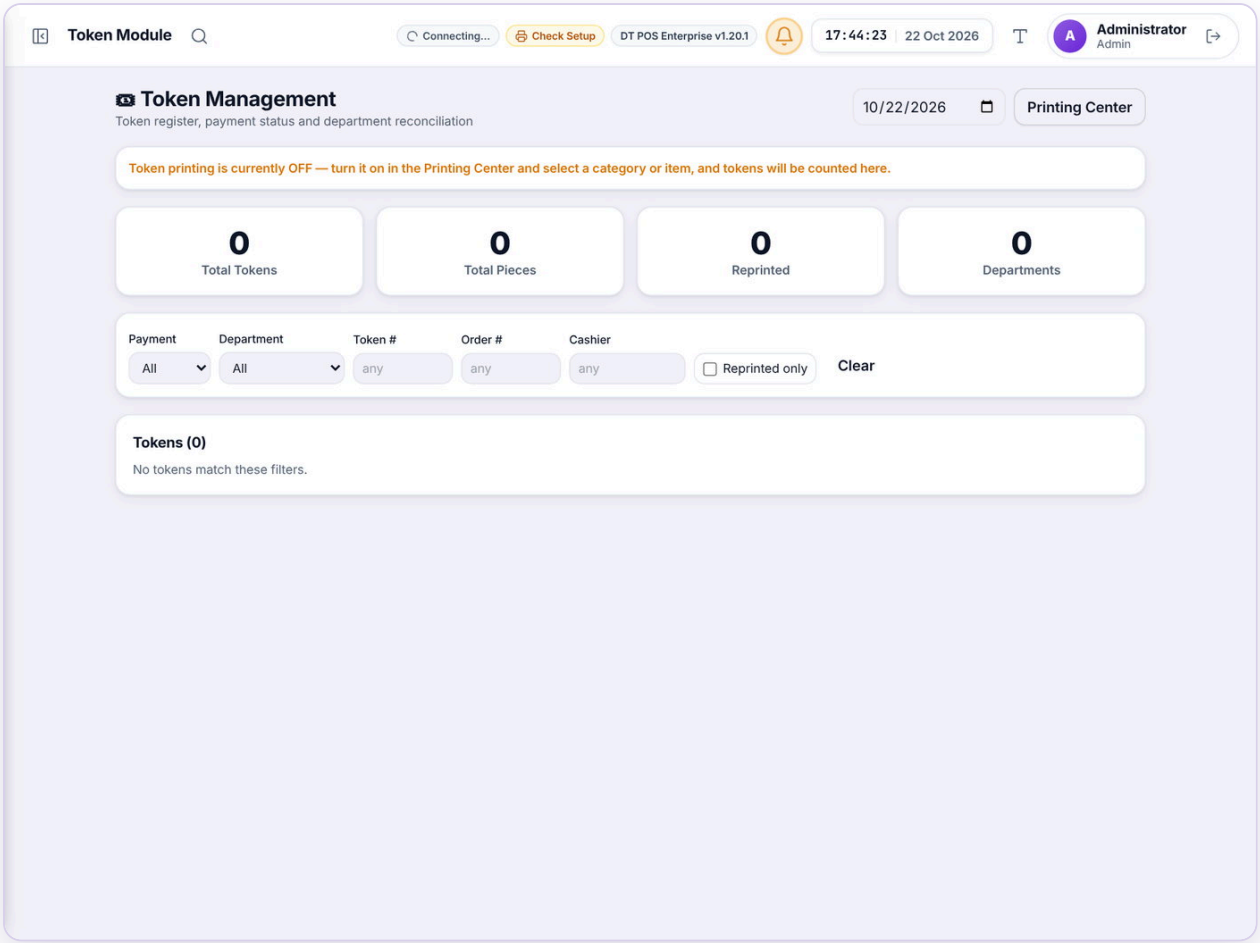

- **Food Cost** — quantity, sales, cost and FC % per item.
- **Profitability** — profit per item.
- **Consumption** — ingredients used by the recipes.
- **Inventory Valuation** — the value of the stock on hand.

Each tab prints.

TOKENS

16.12 Token module

The register of tandoor tokens (separate slips for roti / naan) with payment status and department reconciliation.

When **Tandoor Token** printing is on, each token printed is counted here with its number, items, pieces, amount and payment status.

- Pick a date; filter by payment, department, token number, order number or cashier; show reprinted tokens only.
- The counters total tokens, pieces, reprints and departments.

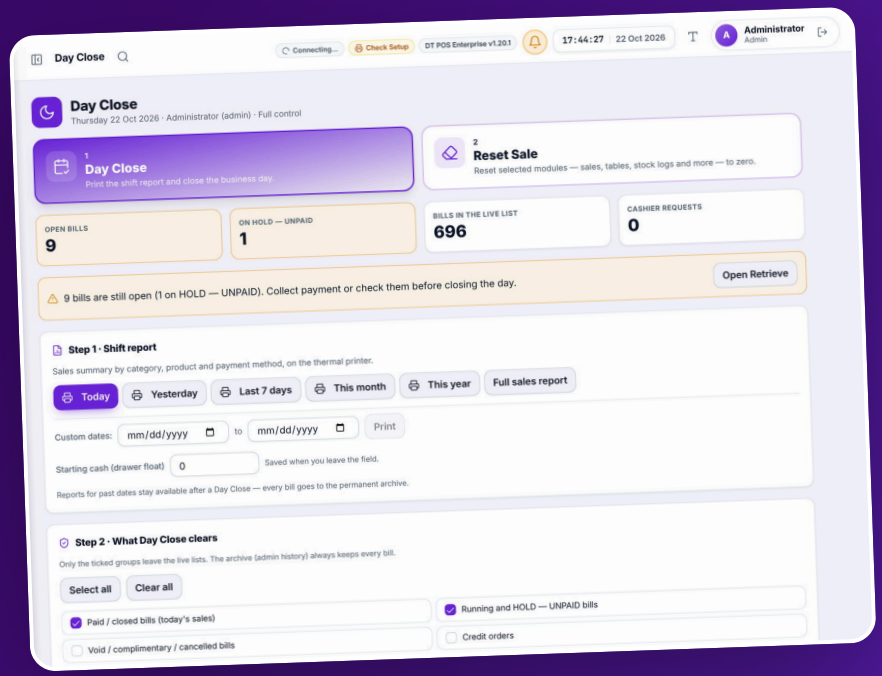

Status. Token printing is off by default. Turn it on and choose the token categories or items in **Printers & Print Server → Tokens** (19.10).

17

Day close and data safety

Ending the business day properly, starting fresh when needed, and keeping a safe copy of everything.

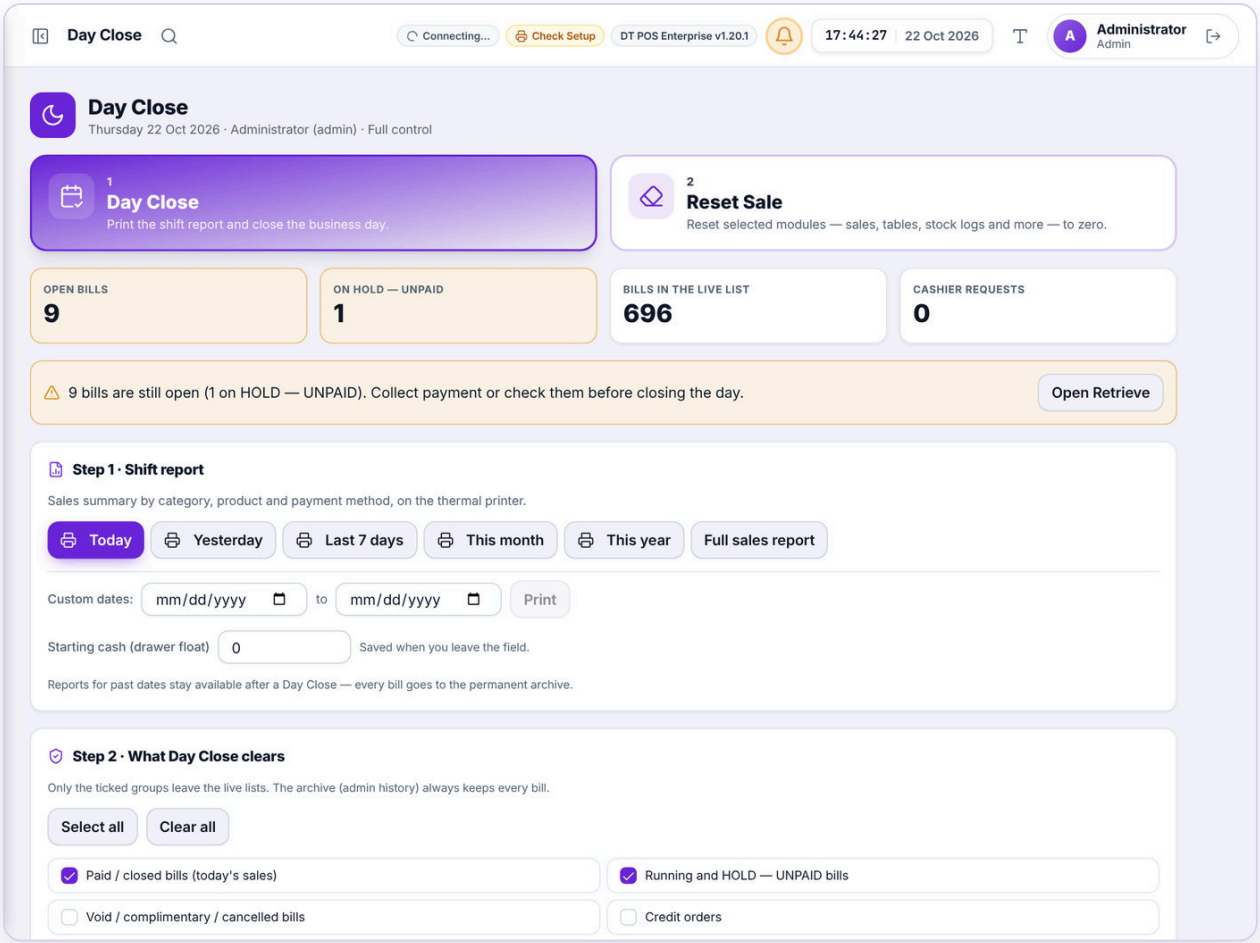

Day close — before you close	105	Reset sale	107
Day close — clearing and closing	106	Backup and restore	108

DAY CLOSE

17.1 Day close — before you close

Day Close prints the shift report, archives the day's bills and clears the live list for tomorrow — after warning about anything still open.

The counters show open bills, bills on hold and unpaid, bills in the live list and cashier requests. A yellow warning lists bills still open; **Open Retrieve** takes you to them.

STEP 1 · SHIFT REPORT

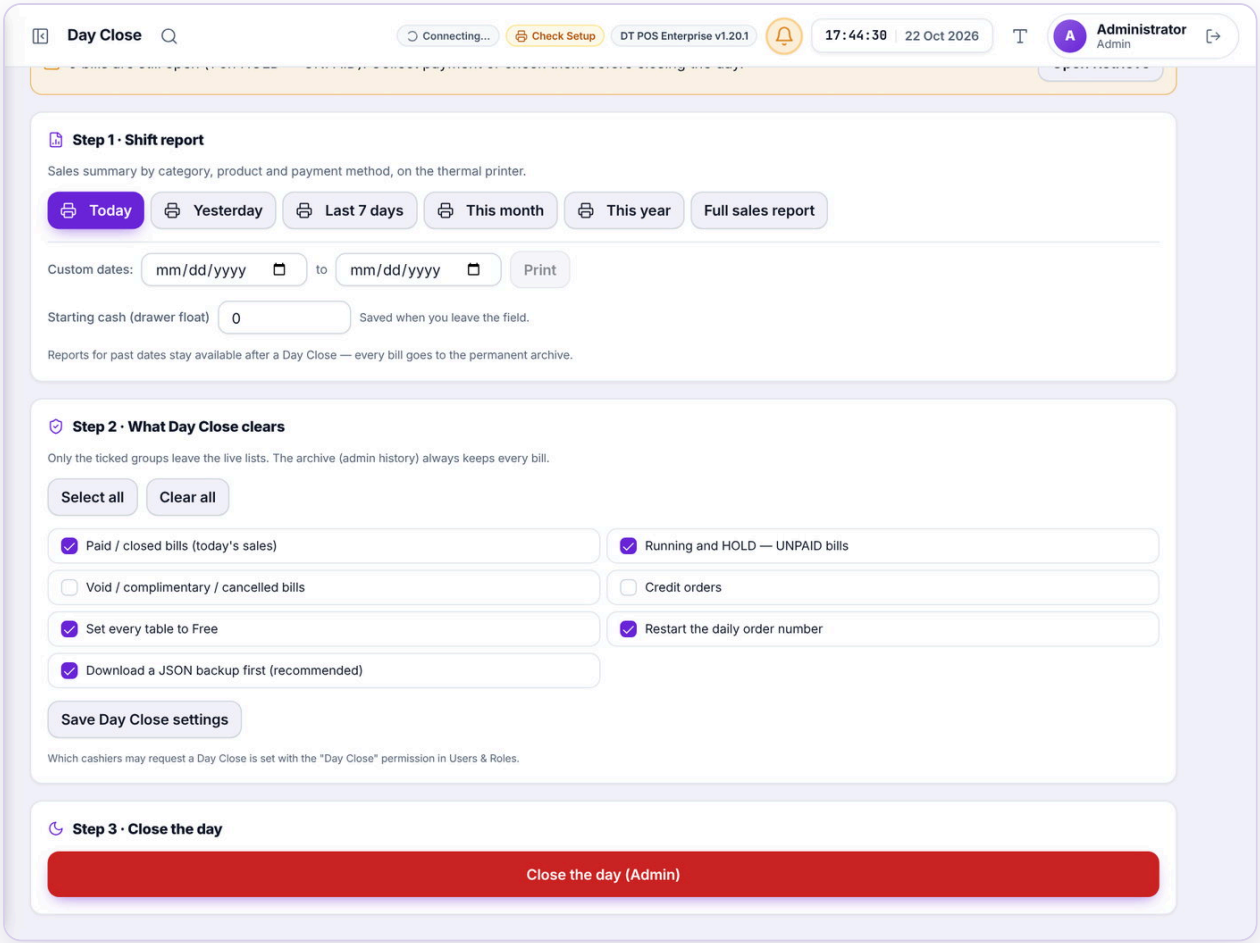

1. Type the **starting cash** (drawer float).
2. Print the shift report for **Today** — or Yesterday, Last 7 days, This month, This year, custom dates or the full sales report.

Reports for past dates stay available after a Day Close: every bill goes to the permanent archive (16.9).

DAY CLOSE

17.2 Day close — clearing and closing

Choose what leaves the live lists, then close the day.

STEP 2 · WHAT DAY CLOSE CLEARS

- Paid / closed bills · running and held unpaid bills · void, complimentary and cancelled bills · credit orders.
- **Set every table to Free** and **restart the daily order number**.
- **Download a JSON backup first** (recommended — keep it ticked).

Only ticked groups leave the live lists; the archive keeps every bill. Save Day Close settings remembers your choice.

STEP 3 · CLOSE THE DAY

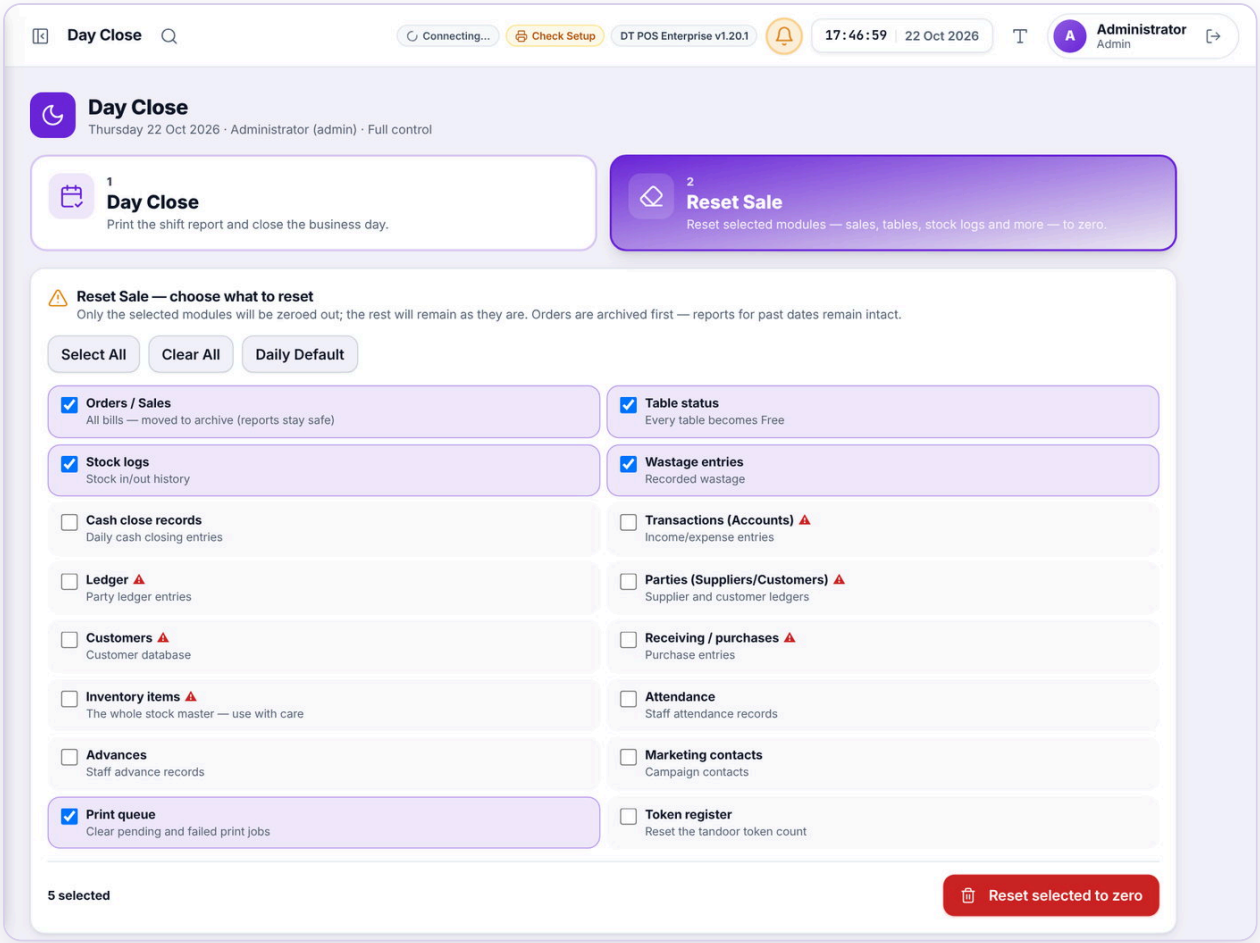

The administrator presses Close the day (Admin). A cashier with the **Day Close** page permission can **request** a Day Close instead; the request appears for the administrator to confirm.

> Unpaid credit is carried forward. It is not deleted by Day Close.

DAY CLOSE

17.3 Reset sale

Sets chosen modules back to zero — for example after training, before the real opening day.

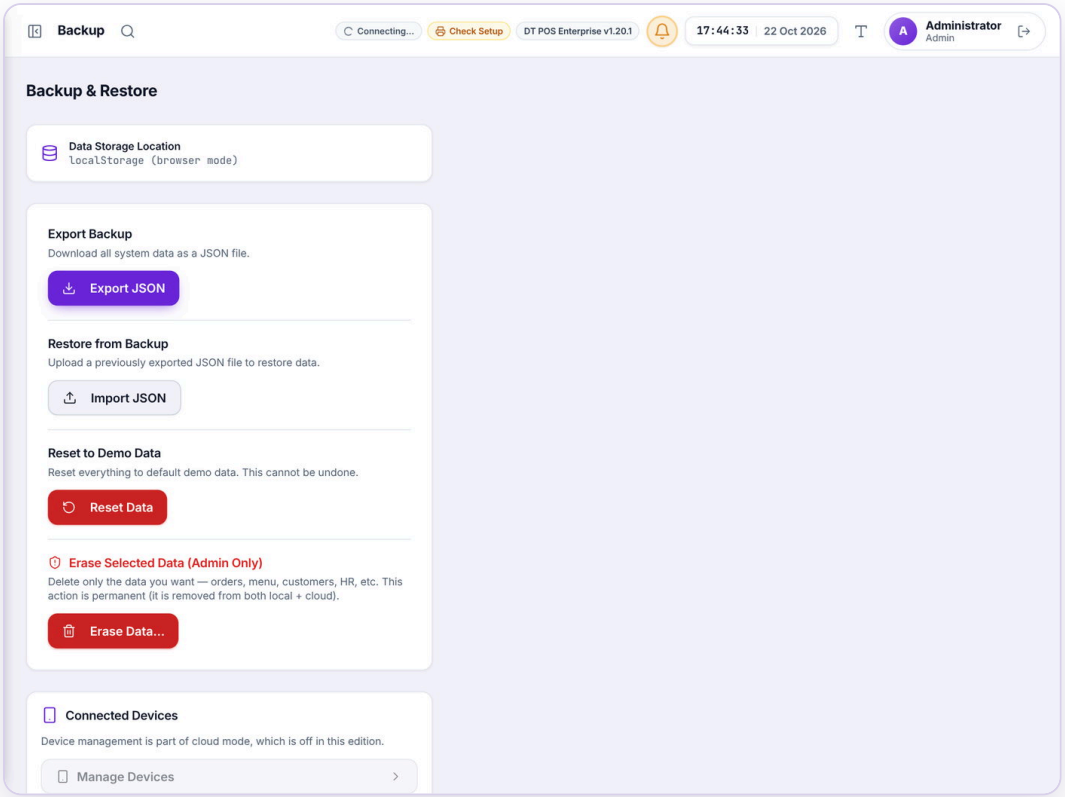

1. On the Day Close screen choose **Reset Sale**.
2. Tick the modules to reset: orders / sales (moved to the archive), table status, stock logs, wastage, cash closes, accounts, ledgers, parties, customers, receiving, inventory, attendance, advances, marketing contacts, print queue and token register. **Daily Default** ticks the usual set.
3. Press **Reset selected to zero** and confirm.

Take care. Items marked ⚠ — accounts, ledgers, parties, customers, receiving and inventory — are master data. Resetting them cannot be undone. Take a backup first (17.4).

BACKUP

17.4 Backup and restore

A complete copy of the restaurant's data in one file — to keep safe, or to move to a new computer.

- **Data Storage Location** — where the data lives. In the desktop app it is a `DT-POS` folder: beside the program, on a non-C drive such as `D:DT-POS`, or in the Windows user's AppData as a last resort. It holds the database, the previous good copy, dated backups and logs. (This picture was taken in a browser, which keeps the data in browser storage.)
- **Export JSON** — downloads all data as one backup file. Keep copies on a USB drive or in email.
- **Import JSON** — restores a backup file. It replaces the data on this computer.
- **Reset Data** — returns everything to the starting demo data.
- **Erase Data...** — deletes only the data you choose (administrators).

Take care. Import, Reset and Erase replace or delete data and cannot be undone. Export a backup before using them.

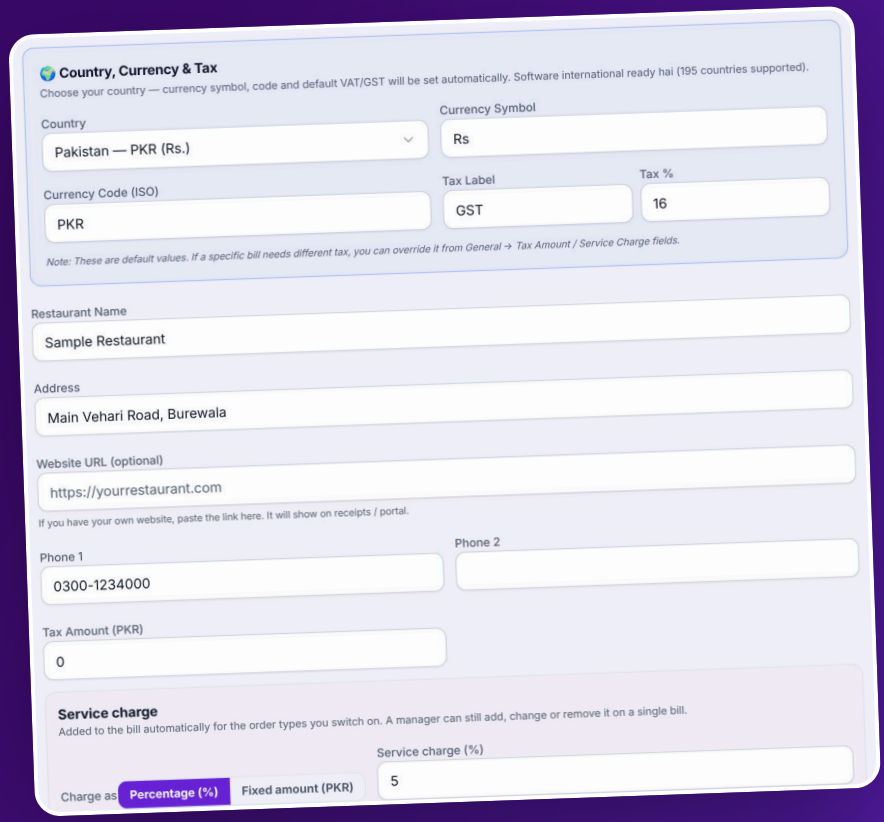

Habit. Keep "Download a JSON backup first" ticked in Day Close: you then get a backup every day automatically.

18

Settings

Everything the administrator configures: restaurant details, charges and tax, looks and layout, tables, printing, the kitchen ticket, WhatsApp and the customer display.

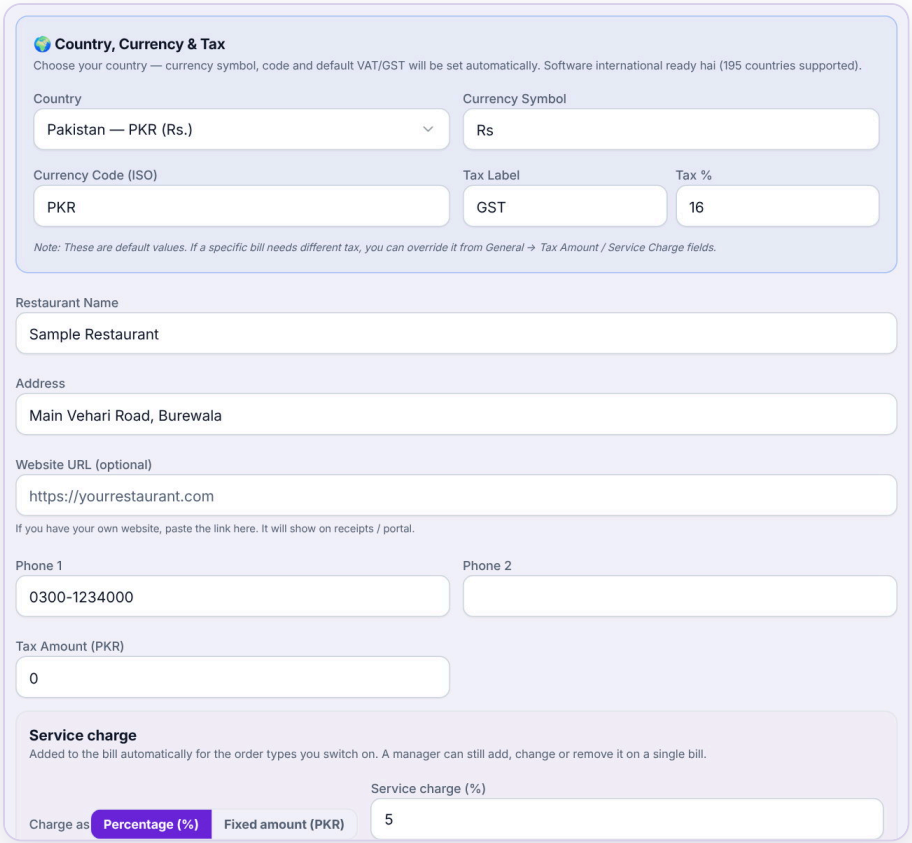

General — restaurant, currency and tax	110
General — charges, discounts, weight items and payment	111
Appearance	112
Modules, and the screen layout	113
Tables, floors, kitchens and waiters	114
Self-pickup and order-type options	115
Printer	116
Receipt design and receipt fonts	117
KOT settings — the kitchen ticket	118
WhatsApp	119
Cities and delivery service areas	120
Display — the customer screen	121

SETTINGS

18.1 General — restaurant, currency and tax

The details printed on every bill, and the money settings behind every total. Settings are open to administrators.

HOW SETTINGS IS LAID OUT

The left column lists the tabs in groups — **General**, **Operations**, **Printing**, **Integrations**, **Advanced**. Change a value and press the **Save** button at the bottom of the tab (e.g. *Save Settings*, *Save Display Settings*). The **Data security & isolation** strip at the top confirms the local data is encrypted and kept separate per restaurant.

COUNTRY, CURRENCY & TAX

Pick the country to fill in the currency symbol and ISO code. The **Tax %** beside it is a reference value for that country; it is *not* added to bills — bills use **GST / VAT %** (next page).

RESTAURANT

Restaurant name, **address**, optional **website**, **Phone 1** and **Phone 2** — printed in the receipt header and on reports.

Tax amount (PKR) — an optional fixed tax per bill (used only when GST % is 0).

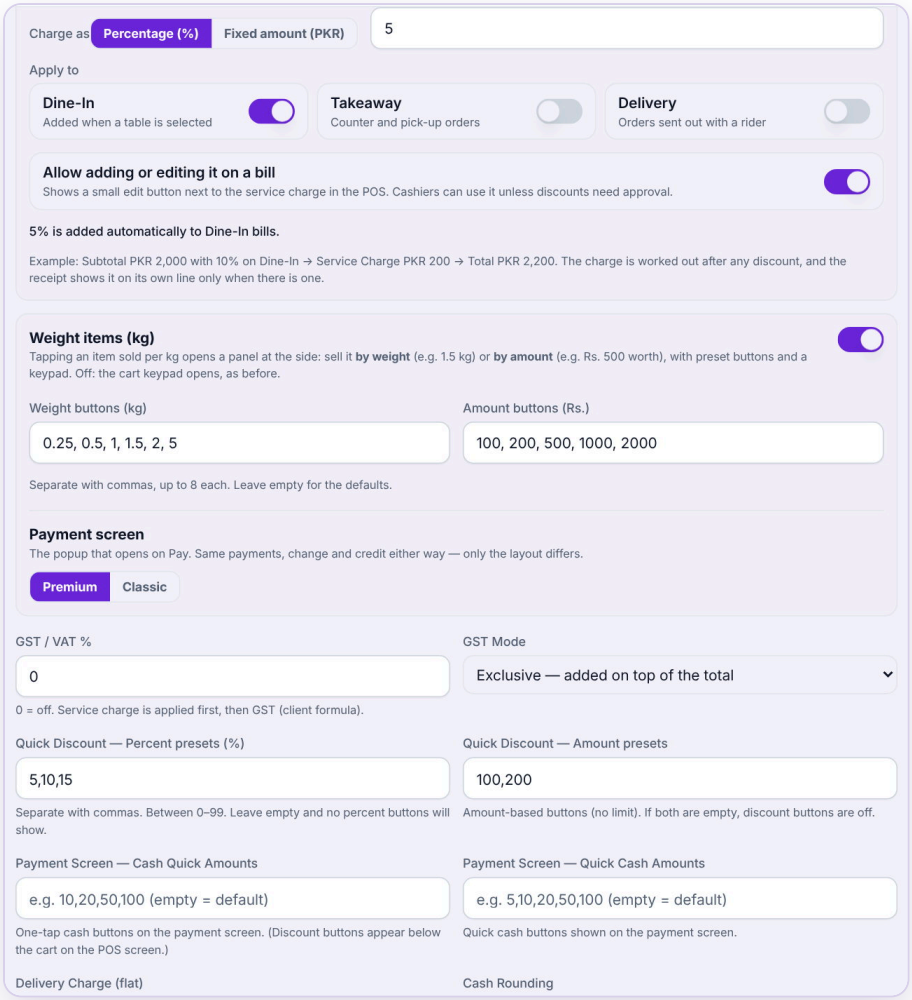

SERVICE CHARGE

Charge as a **percentage** or a **fixed amount**, the value, and the order types it applies to (continued on the next page).

SETTINGS

18.2 General — charges, discounts, weight items and payment

Further down the General tab.

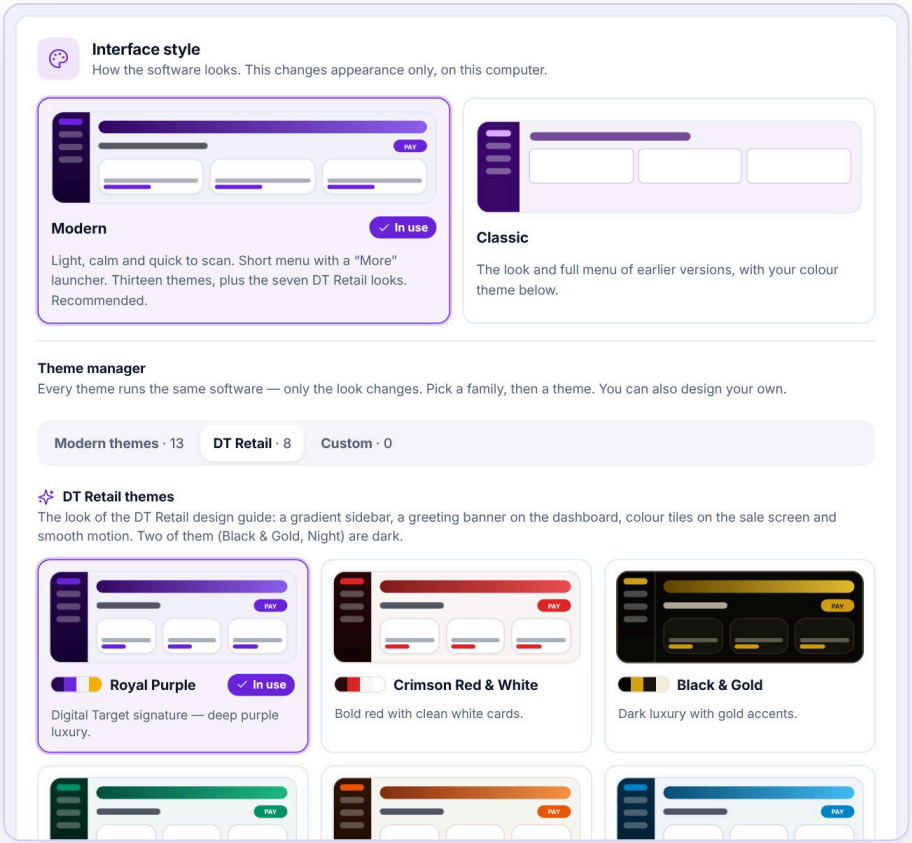

- **Service charge — apply to** Dine-In, Takeaway and/or Delivery; **Allow adding or editing it on a bill**. A live example shows the effect.
- **Weight items (kg)** — the side panel on/off, and your kg and rupee preset buttons (4.5).
- **Payment screen** — **Premium** (default) or **Classic** (4.8).
- **GST / VAT %** and **GST mode** — exclusive (added on top) or inclusive (already in the price).
- **Quick discount presets** — the % and rupee buttons in the bill.
- **Payment screen quick amounts** — your own cash note buttons.
- **Delivery charge** (flat) and **cash rounding**.

Lower still: the **event discount**, categories and items excluded from discounts, **cashier discount approval**, **Food Cost & Profit Tracking**, the **loyalty program** (points per Rs 100, value of a point, minimum to redeem) and the logos.

SETTINGS

18.3 Appearance

How the software looks on this computer. Appearance never changes data, bills or printing.

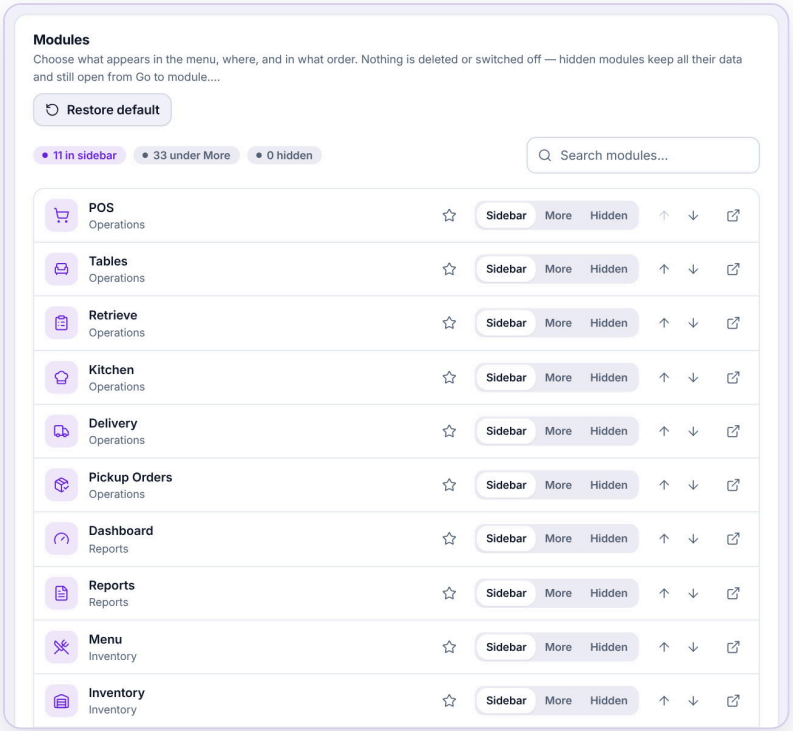

1. Choose the **interface style**: **Modern** (recommended) or **Classic**.
2. In the **Theme manager**, pick a family — **Modern themes** (13), **DT Retail** (8) or **Custom** — then a theme. It applies at once.
3. DT Retail themes add a gradient menu, a dashboard banner and gentle motion; **Smooth animations** can be switched off for slower PCs.
4. **Custom** lets you design your own theme (colours for the menu, page and buttons) and export or import it as a file.

Each computer keeps its own look, so the counter and the manager's PC can differ. A one-click option returns to the previous look.

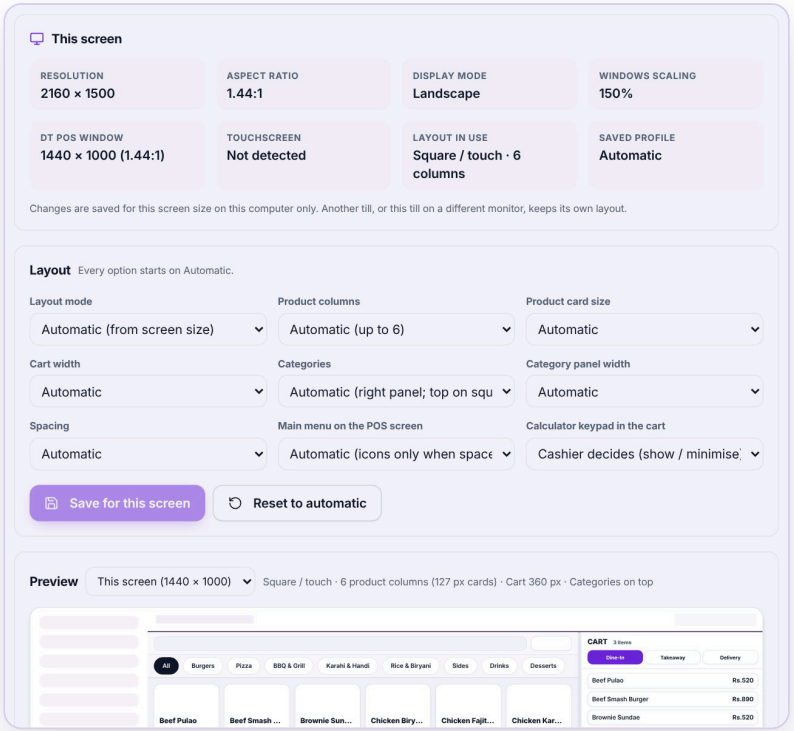

SETTINGS

18.4 Modules, and the screen layout

Modules — what the menu shows.

For each module choose **Sidebar**, **More** or **Hidden**, change its order with the arrows, and star favourites. Nothing is deleted — hidden modules keep their data. **Restore default** undoes everything.

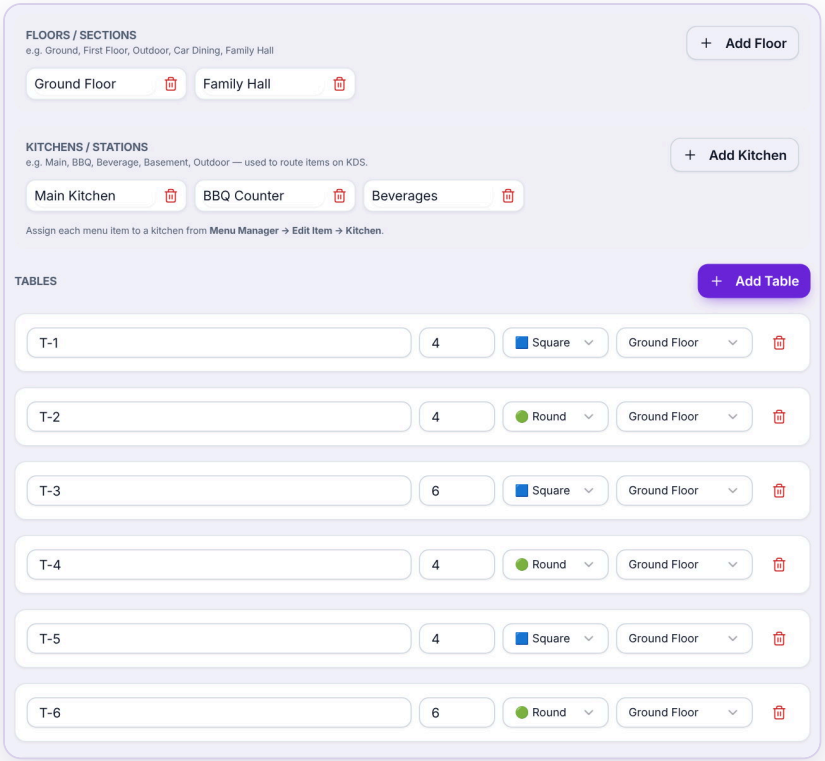

Screen & Layout — the POS on this monitor.

Shows this screen's resolution and scaling. Choose the layout mode, product columns and card size, cart width, category placement and width, spacing, the main menu on the POS and the keypad. Each option starts on *Automatic*. **Save for this screen** stores it for this monitor size only; the preview shows the result.

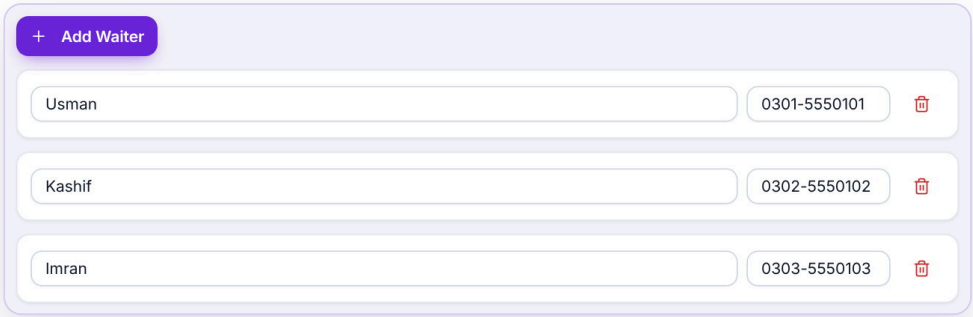

SETTINGS

18.5 Tables, floors, kitchens and waiters

Tables — floors, kitchens and tables.

- **Floors / sections** — Ground, First Floor, Outdoor, Family Hall…
- **Kitchens / stations** — Main, BBQ, Beverages… Each menu item is routed to one (11.2).
- **Tables** — name, chairs, shape and floor. **Add Table** adds one.

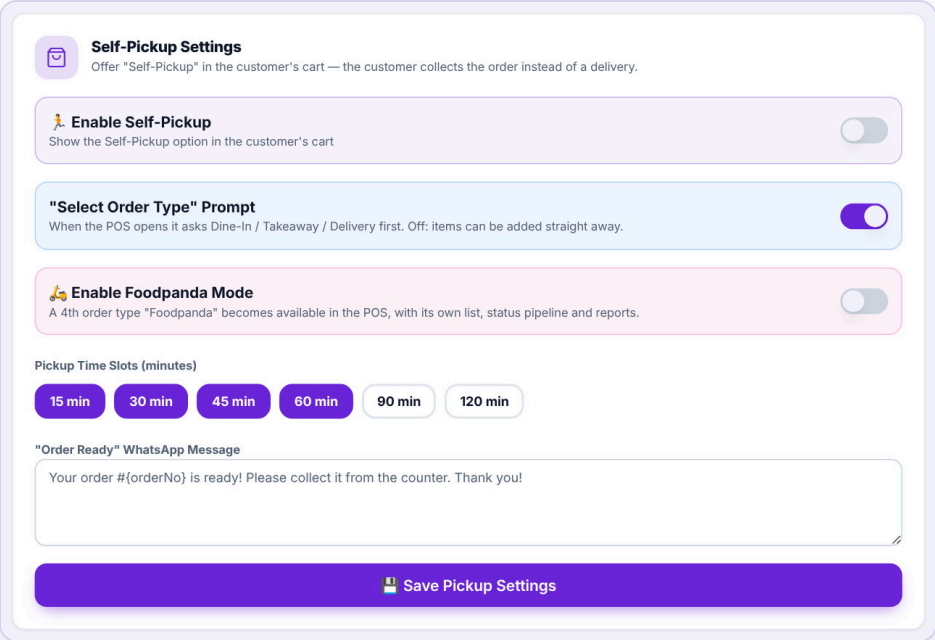

Waiters — the service staff list.

Add Waiter, then the name and phone. Waiters are chosen when a table is seated. The same list, with order counts and an active switch, is under Staff (15.3).

SETTINGS

18.6 Self-pickup and order-type options

What customers can choose, and the questions the POS asks when an order starts.

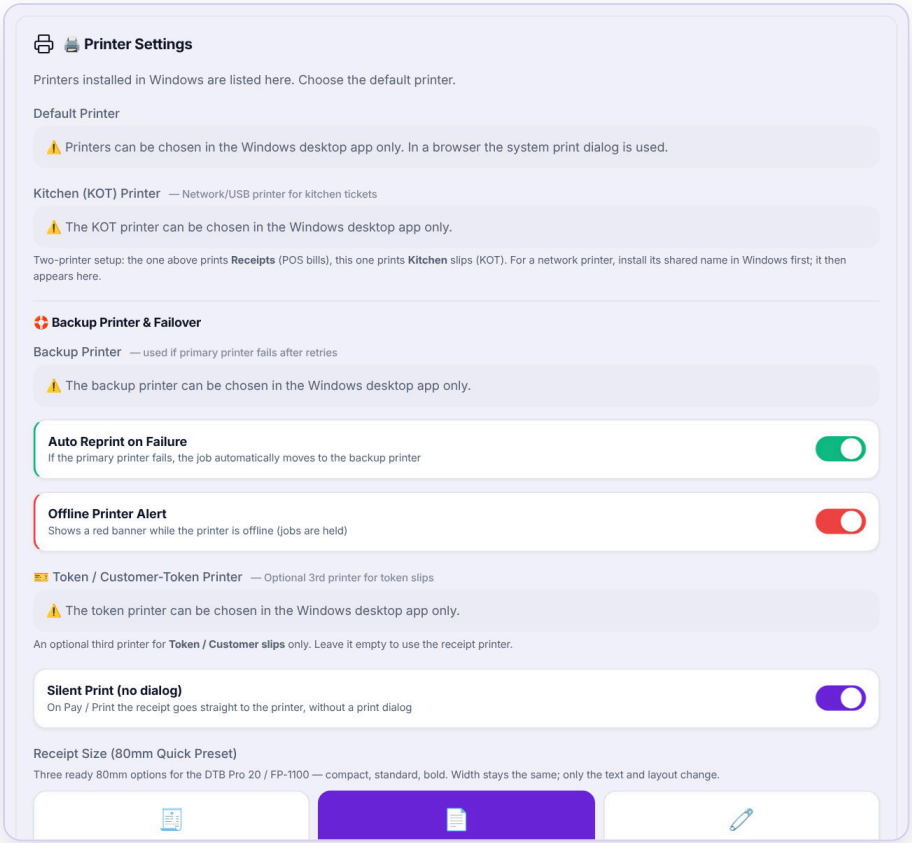

- **Enable Self-Pickup** — a pickup option for online customers.
- **"Select Order Type" prompt** — the question when the POS opens (4.1). Off: items can be added straight away.
- **Enable Foodpanda Mode** — the fourth order type (8.3).
- **Pickup time slots** — 15, 30, 45, 60, 90 or 120 minutes, as buttons the customer can choose.
- **"Order Ready" WhatsApp message** — the text sent to a customer when the pickup order is ready (8.2).

Press Save Pickup Settings after any change.

SETTINGS

18.7 Printer

The basic printer choices for this computer. The full Printer Center is described in chapter 19.

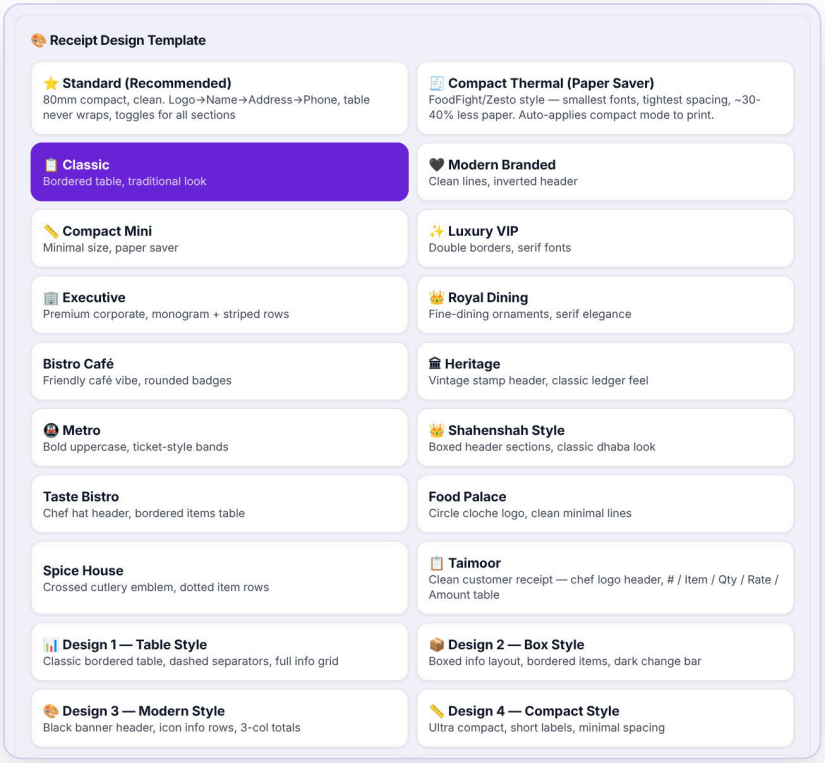

- **Default printer**, **Kitchen (KOT) printer** and an optional **Token printer** — chosen from the printers installed in Windows.
- **Backup printer & failover** — **Auto Reprint on Failure** moves a job to the backup printer when the main one fails.
- **Offline Printer Alert** — a red banner while a printer is offline; jobs are held, not lost.
- **Silent Print** — the receipt goes straight to the printer, with no print dialog.
- Paper size, cut and trim options, and a preset for the Fujitsu FP-1100.

Status. Choosing printers by name and silent printing need the Windows desktop app. In a browser (as in this picture) the system print dialog is used.

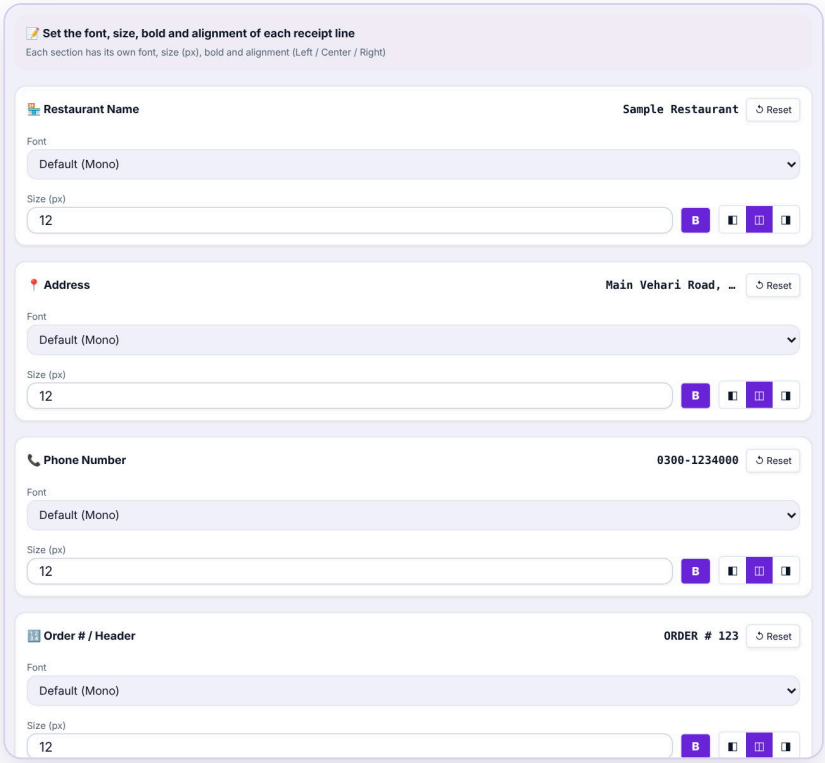

SETTINGS

18.8 Receipt design and receipt fonts

Receipt & QR — design gallery and QR options.

Pick the bill design — Standard (recommended), Compact Thermal, Classic, Modern Branded, Luxury VIP, Bistro Café and many more — and, further down, the QR code or barcode printed on the bill and what it holds. The same gallery, with a live preview, is in the Printer Center (19.5).

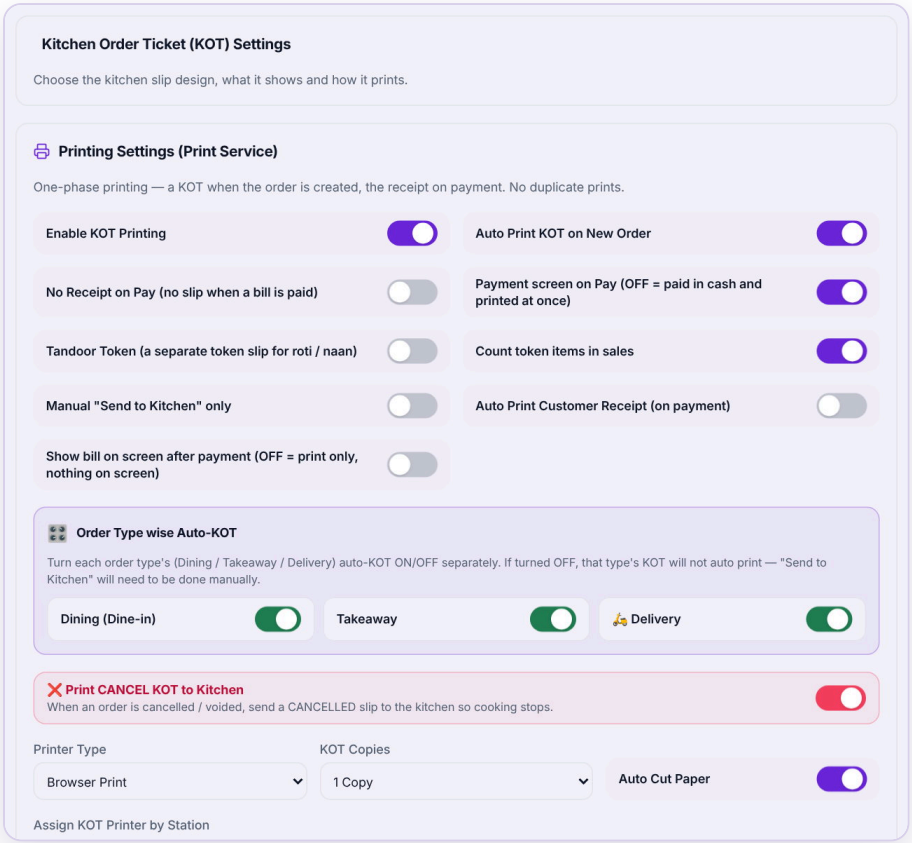

Receipt Fonts — per line.

For each part of the receipt — restaurant name, address, phone, order number, items, totals — choose the font, size (px), bold and alignment. Urdu fonts (Jameel Noori Nastaleeq and others) are available for Urdu names. **Reset** restores a line.

SETTINGS

18.9 KOT settings — the kitchen ticket

When kitchen tickets and receipts print, what the KOT shows, and the kitchen timers.

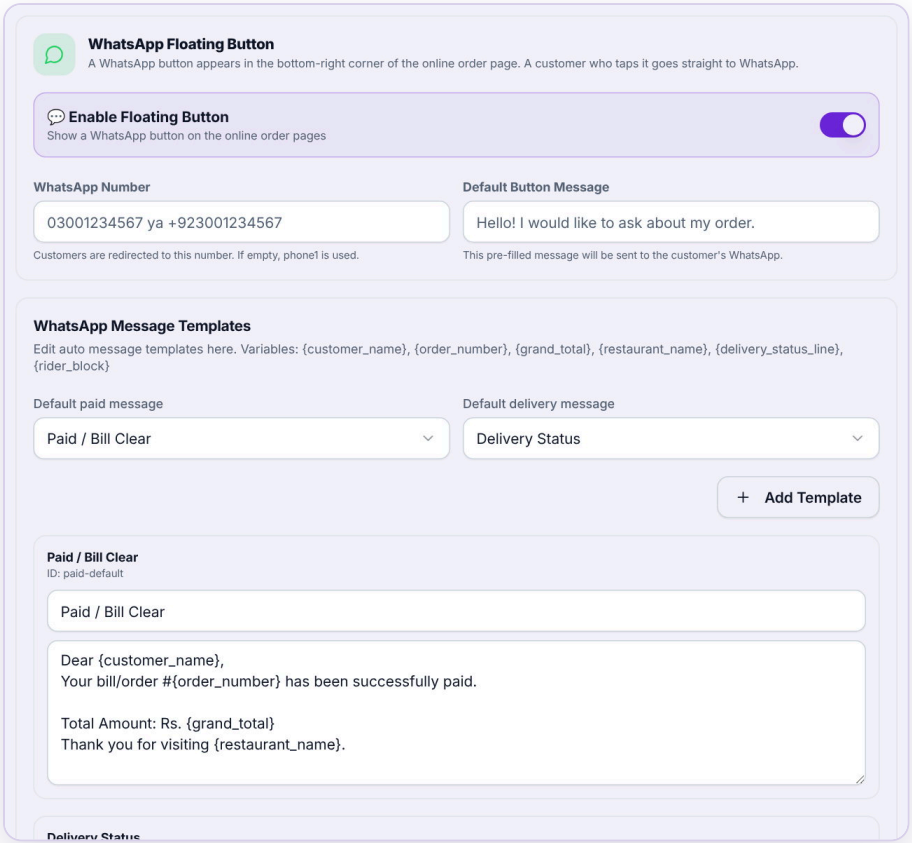

- **Enable KOT Printing** and **Auto Print KOT on New Order**.
- **No Receipt on Pay** — no slip when a bill is paid. **Payment screen on Pay** — off pays in cash and prints at once.
- **Tandoor Token** and **Count token items in sales** (16.12).
- **Manual "Send to Kitchen" only**; **Auto Print Customer Receipt**; **Show bill on screen after payment**.
- **Order-type auto-KOT** — Dine-in, Takeaway and Delivery each on or off.
- **Print CANCEL KOT to Kitchen** — a cancel slip when an order is voided.
- Printer type, number of KOT copies, auto-cut, printer by station, and the KOT **design** (Classic, Bold, Minimal, Elegant, VIP Chef, Station…) with what it shows.
- Kitchen timer minutes and the **business day start** time.

SETTINGS

18.10 WhatsApp

The WhatsApp button on the online order page and the message templates used across the POS.

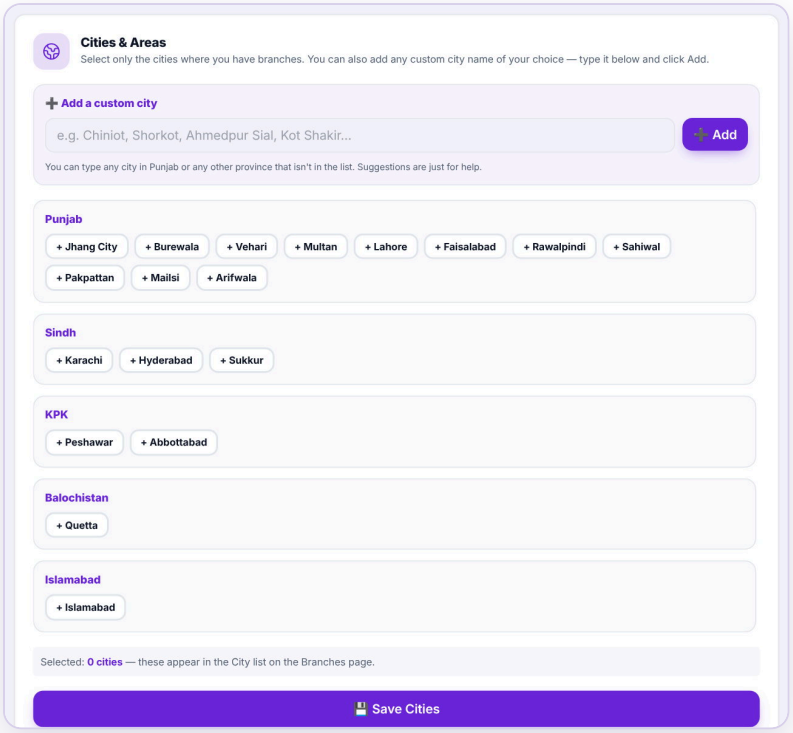

- **WhatsApp Floating Button** — for the online order page (online edition), with the number and the default message.
- **Message templates** — *Paid / Bill Clear*, *Delivery Status* and your own. Choose the default paid and delivery templates; **Add Template** adds another.
- Variables filled in automatically: `{customer_name}`, `{order_number}`, `{grand_total}`, `{restaurant_name}`, `{delivery_status_line}`, `{rider_block}`.

Templates appear in the WhatsApp module (13.6) and on the delivery board (8.1).

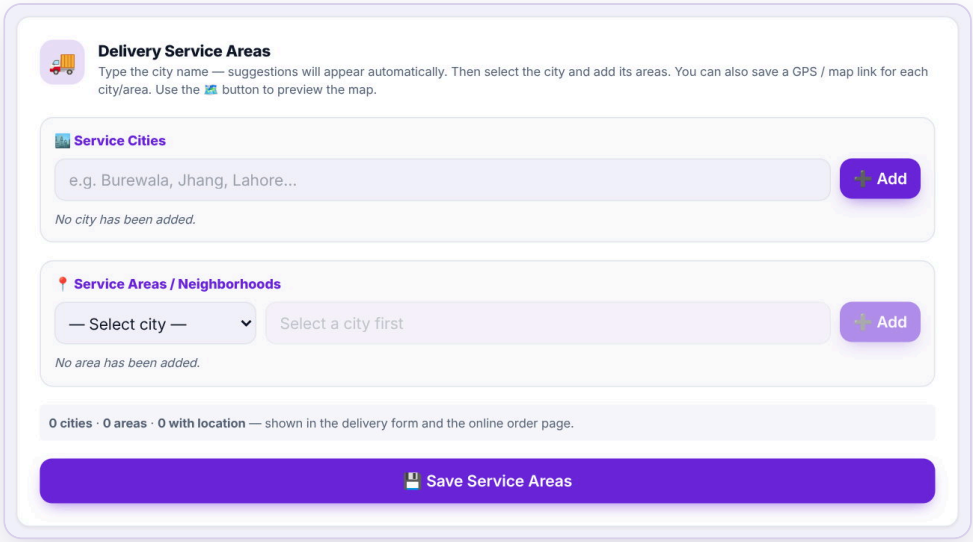

SETTINGS

18.11 Cities and delivery service areas

Cities & Areas — by province.

Tick the cities you serve, or add a custom city. They appear in address forms and city lists.

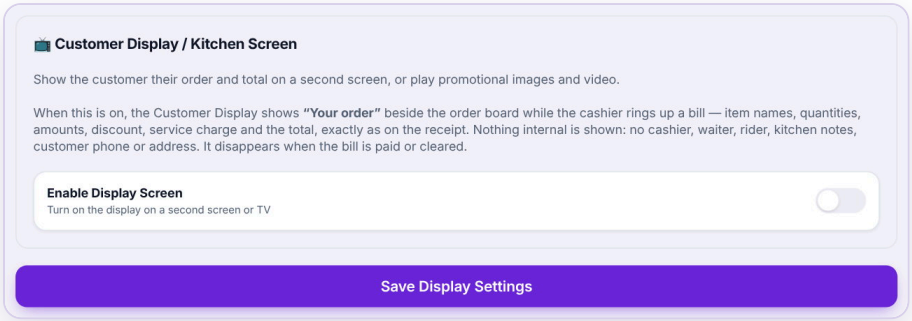

Delivery Service Areas

Add service cities, then the areas or neighbourhoods inside each, with an optional map link. They appear as choices in the delivery form, which keeps addresses consistent.

SETTINGS

18.12 Display — the customer screen

Switches on the Customer Display and decides what it shows.

1. Turn on **Enable Display Screen**.
2. Choose what to show: the order items live, a large total, full screen.
3. Add images for the slideshow shown when there is no order.
4. Press **Save Display Settings**, then open the display from the Kitchen screen's TV Mode (7.2).

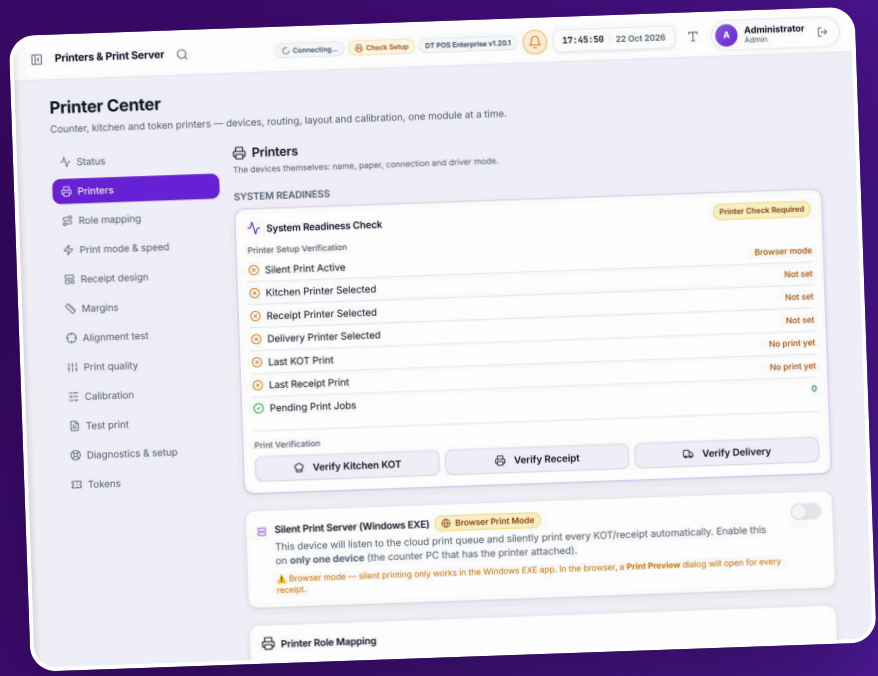

While the cashier rings up a bill, the customer sees "Your order" with the item names, quantities, amounts, discount, service charge and total — exactly as on the receipt. Nothing internal is shown: no cashier, waiter, rider, kitchen notes or customer phone.

19

Printers and the Printer Center

Setting up receipt, kitchen and token printers, which slip prints where, the receipt design, margins, print quality and the troubleshooting tools.

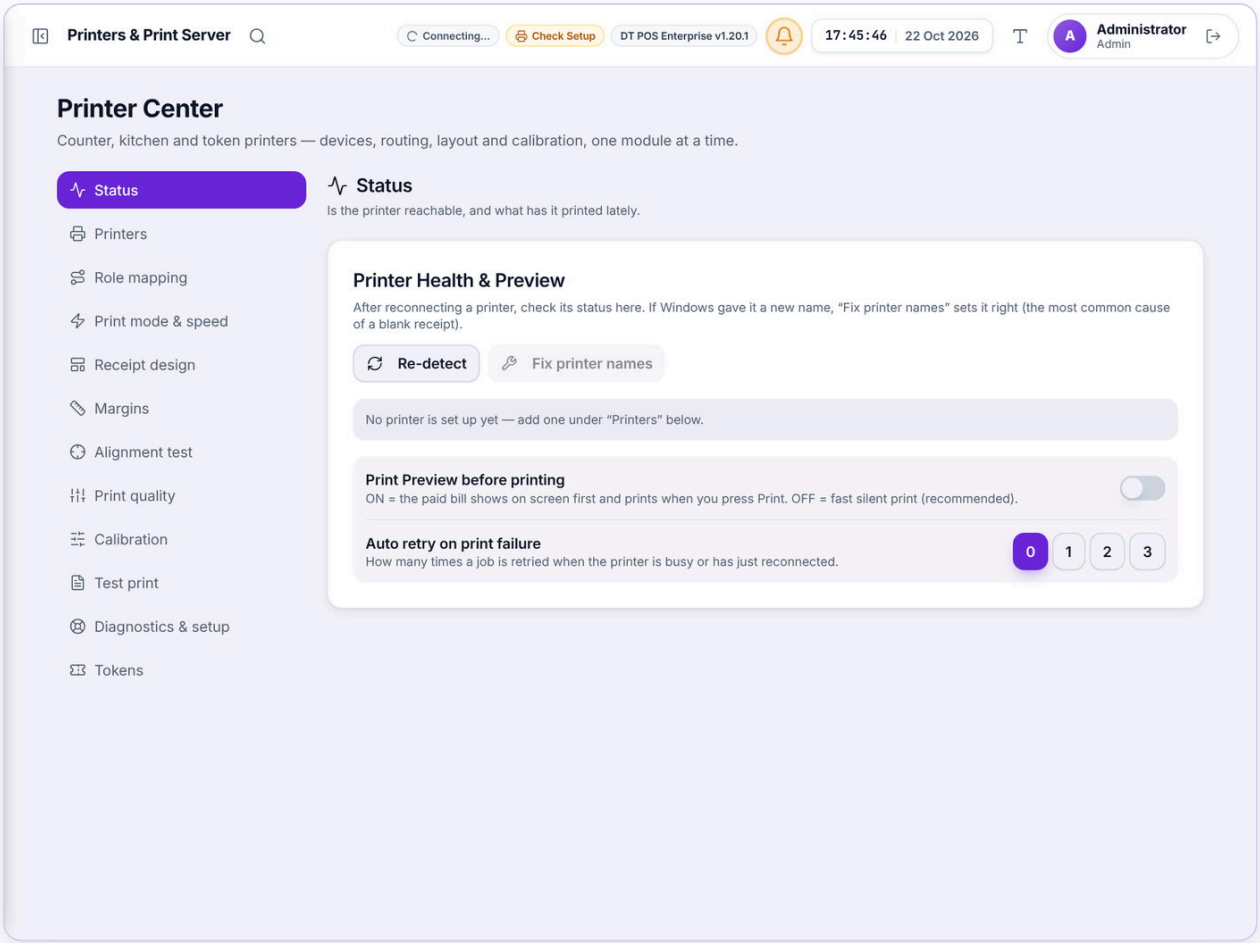

Status	123	Alignment test	129
Printers and system readiness	124	Print quality	130
Role mapping	125	Calibration	131
Print mode and speed	126	Tokens and printing options	132
Receipt design	127	Test print, diagnostics and machine setup	133
Margins	128	Printer diagnostic center	134

PRINTER CENTER

19.1 Status

Is each printer reachable, and what has it printed lately? The Printer Center opens here.

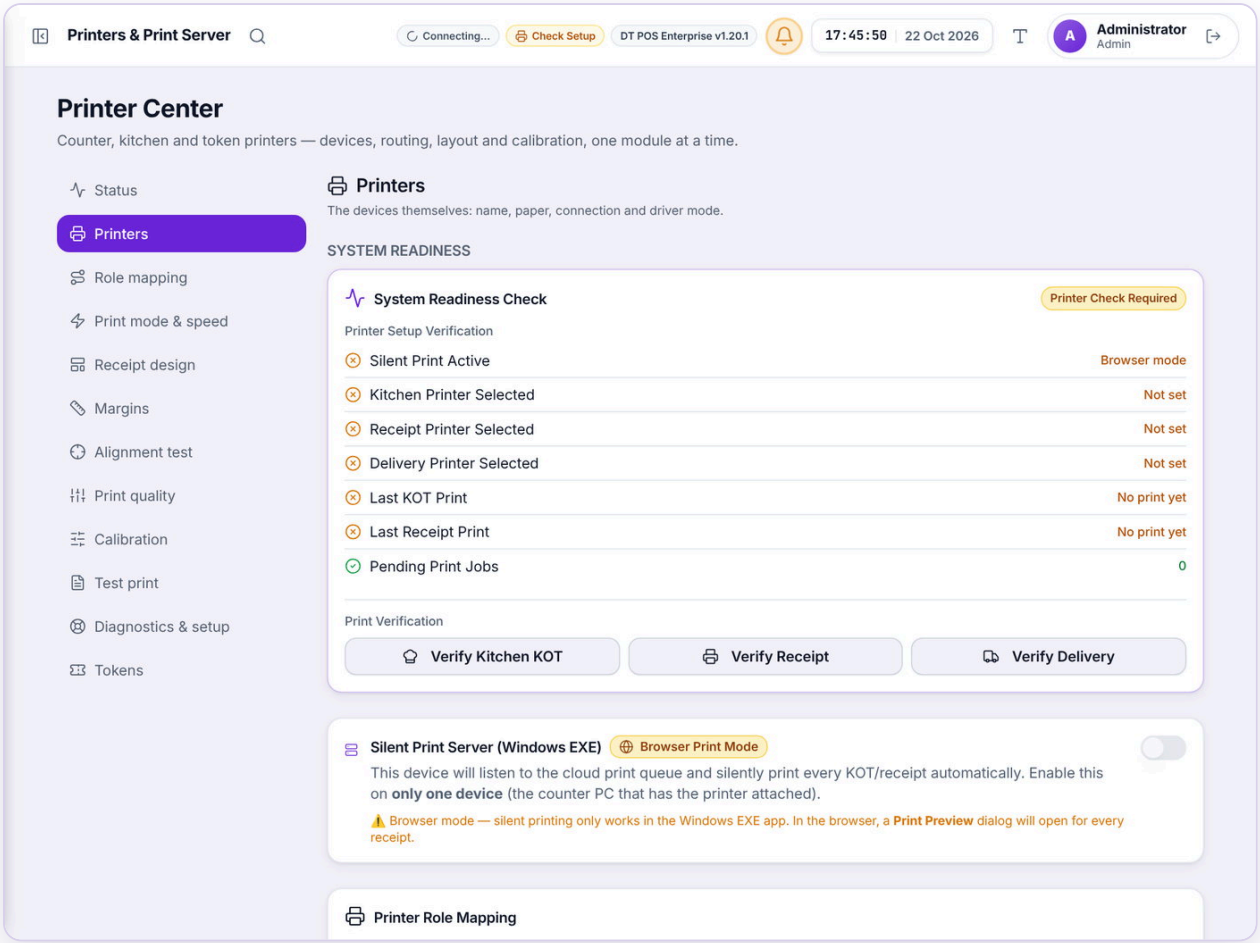

The Printer Center has one section per job, listed on its left: Status, Printers, Role mapping, Print mode & speed, Receipt design, Margins, Alignment test, Print quality, Calibration, Test print, Diagnostics & setup and Tokens.

- **Re-detect** checks the printers again — after reconnecting one, for example.
- **Fix printer names** updates a printer whose Windows name changed — the most common cause of a blank receipt.
- **Print Preview before printing** — show the paid bill first; off is the fast silent print.
- **Auto retry on print failure** — 0 to 3 retries.

PRINTER CENTER

19.2 Printers and system readiness

The printers themselves — name, paper, connection and driver mode — and a readiness check.

The **System Readiness Check** lists silent print, the kitchen, receipt and delivery printers, the last KOT and receipt printed and pending jobs, each with a status. **Verify Kitchen KOT**, **Verify Receipt** and **Verify Delivery** print a check slip.

Add each printer with its Windows name, paper width (80 / 58 mm) and mode.

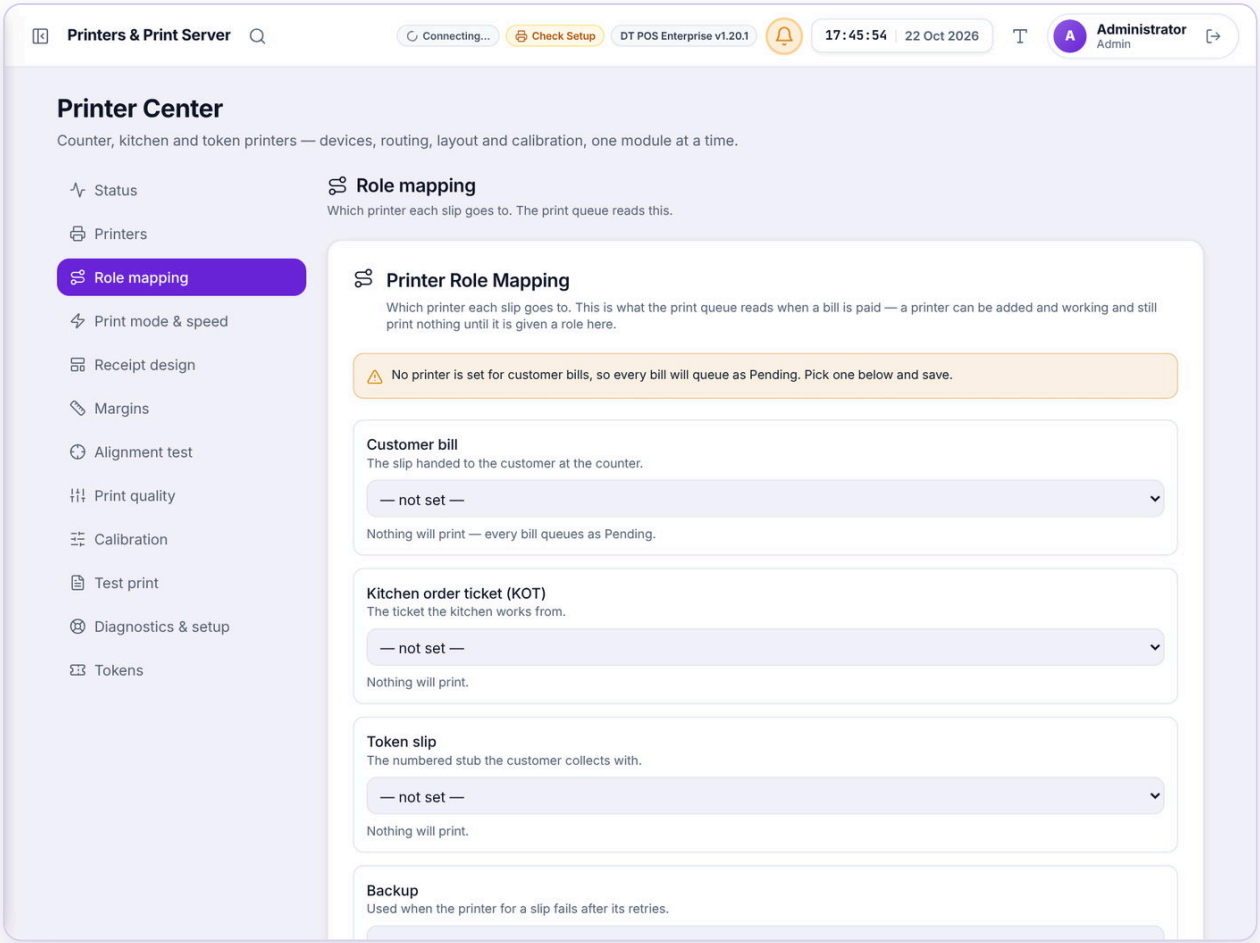

Silent Print Server — on one counter PC only, it prints every KOT and receipt from the queue automatically.

Status. Printer detection and silent printing need the Windows desktop app; in a browser, as here, the checks show *Browser mode*.

PRINTER CENTER

19.3 Role mapping

Which printer each slip goes to. The print queue reads this when a bill is paid.

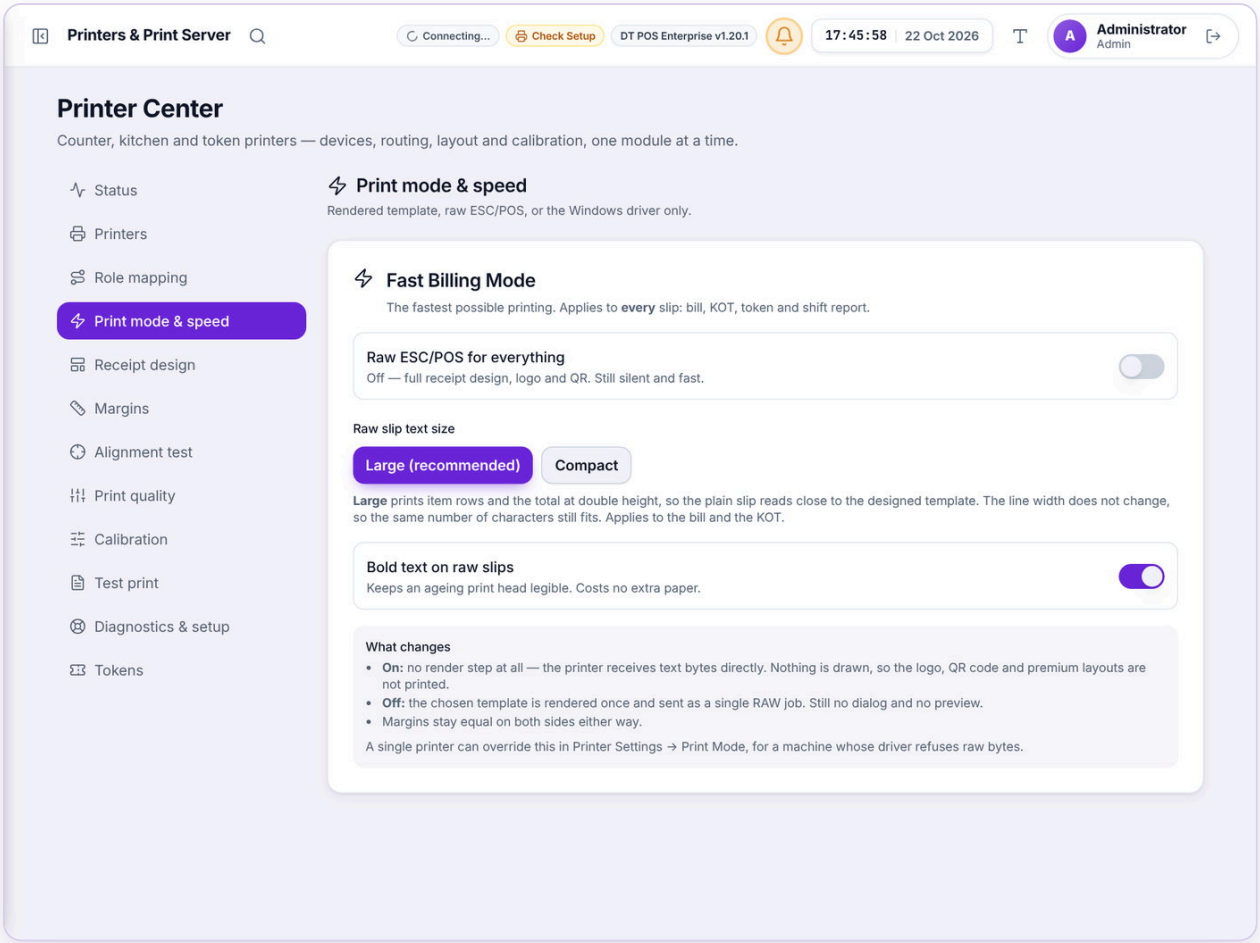

- **Customer bill** — the receipt at the counter.
- **Kitchen order ticket (KOT)** — the ticket the kitchen works from.
- **Token slip** — the numbered stub the customer collects with.
- **Backup** — used when a slip's printer fails after its retries.

Important. A role with no printer prints nothing: every slip of that kind queues as *Pending*, as the yellow warning says. Set at least the customer bill and the KOT.

PRINTER CENTER

19.4 Print mode and speed

Fast Billing Mode: the quickest possible printing, for every slip.

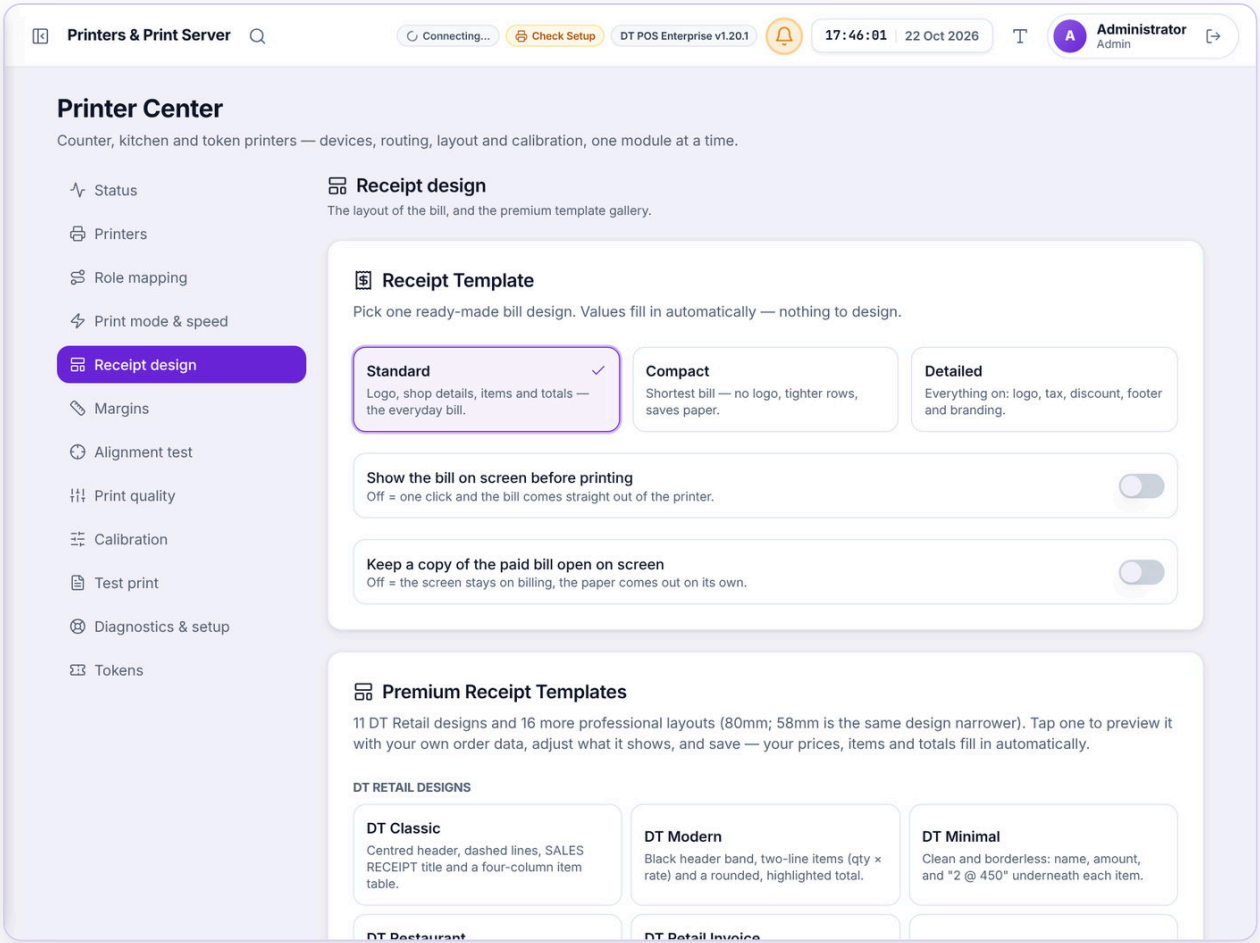

- **Raw ESC/POS for everything** — sends plain printer commands, with no picture step. Fastest; the logo, QR code and premium layouts are not printed.
- Off — the chosen design is drawn and sent as one job; still silent, with no dialog.
- **Raw slip text size** — *Large* (recommended) or *Compact*.
- **Bold text on raw slips** — keeps an ageing print head legible.

A single printer can override this, for a machine whose driver refuses raw commands.

PRINTER CENTER

19.5 Receipt design

The layout of the bill, and the gallery of premium designs.

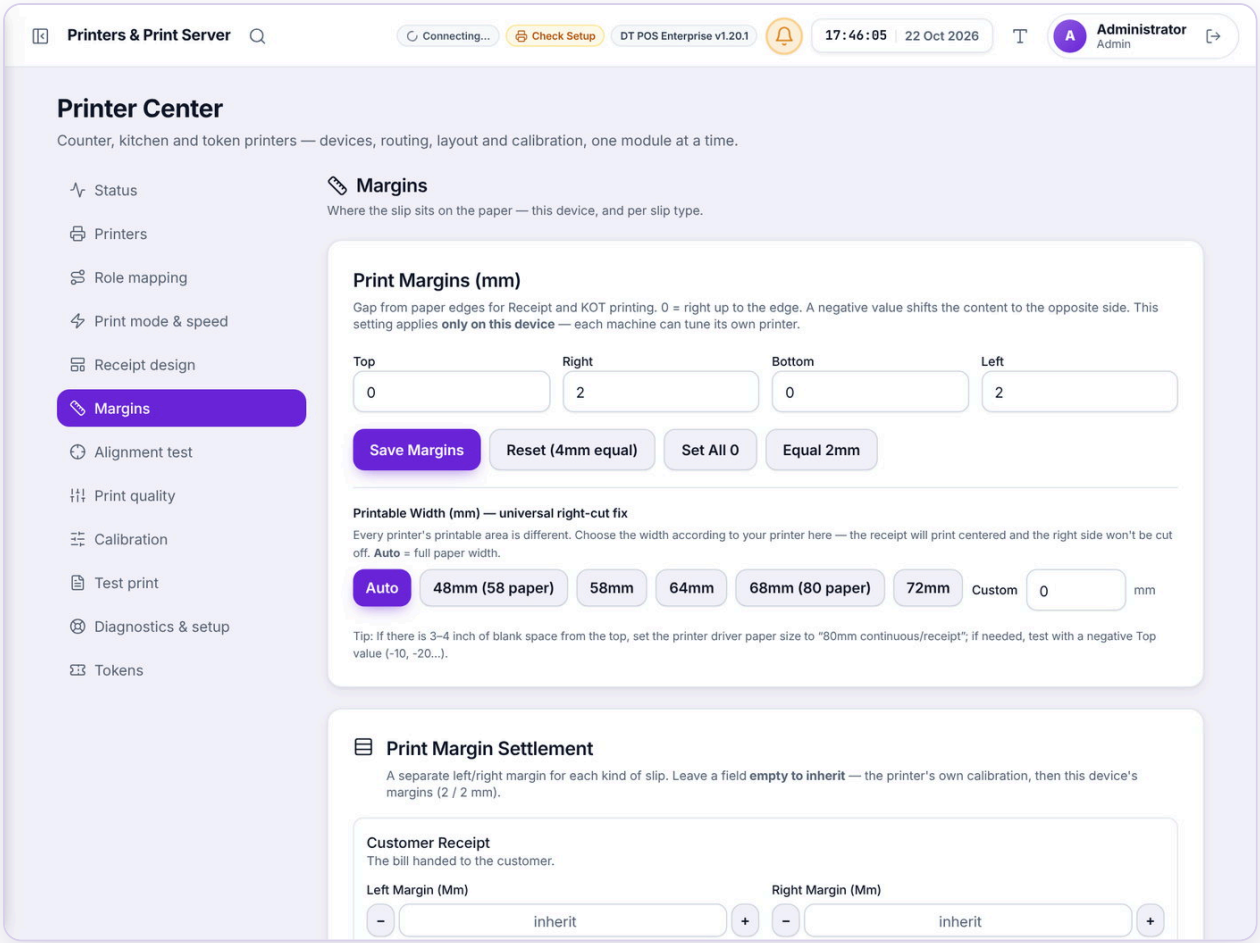

1. Pick a **Receipt Template**: **Standard** (the everyday bill), **Compact** (saves paper) or **Detailed** (logo, tax, discount, footer and branding).
2. Or tap a **premium design** — 11 DT Retail designs and 16 more professional layouts — to preview it with your own order and save it.
3. Choose whether to show the bill on screen before printing, and whether to keep a copy on screen after billing.

58 mm paper. All designs are made for 80 mm. On 58 mm printers some premium designs are wider than the paper; use Standard, Compact or the DT Retail designs there (see 20.3).

PRINTER CENTER

19.6 Margins

Where the slip sits on the paper — for this computer and per kind of slip.

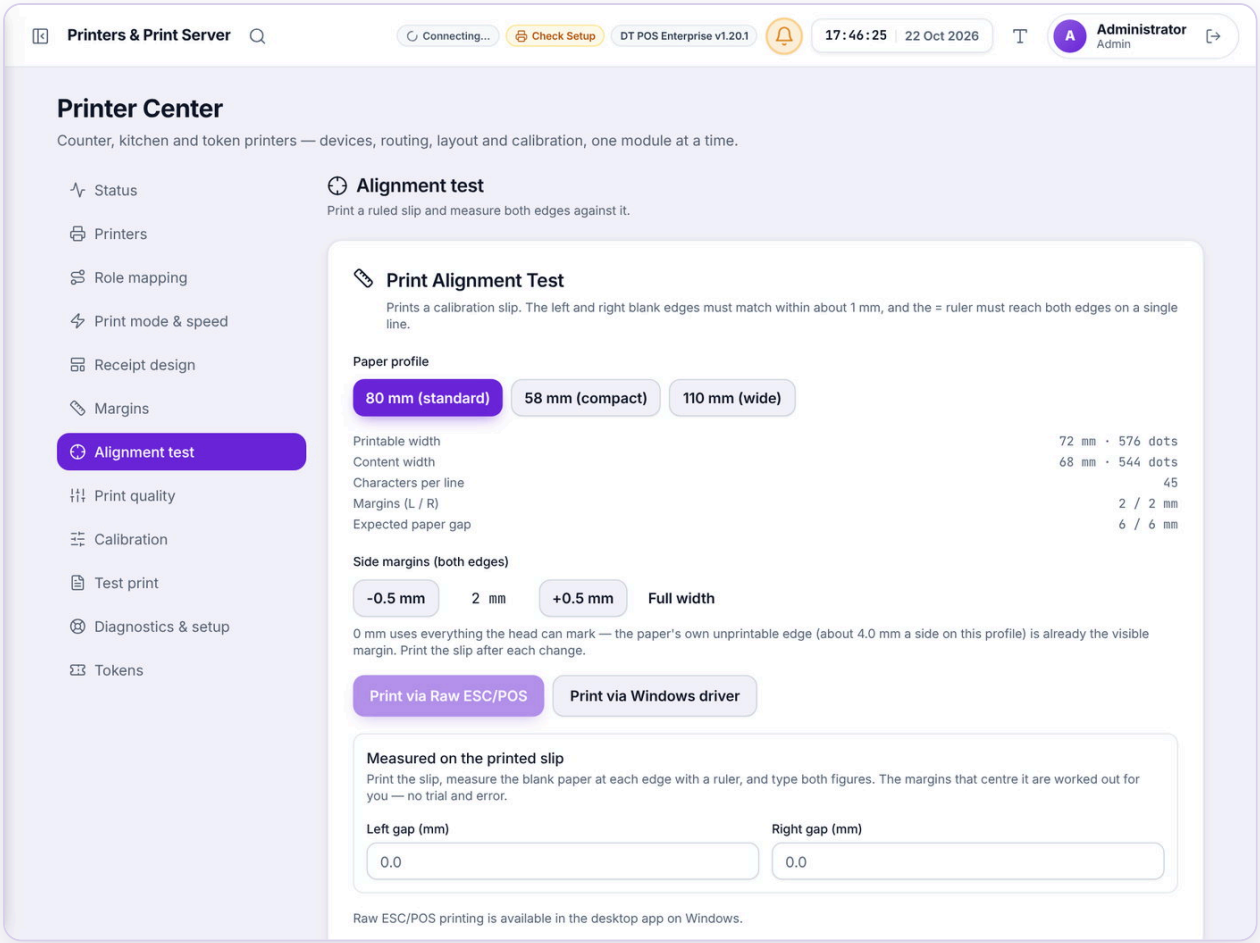

- **Print margins** (top, right, bottom, left, in mm) for this device. Negative values move the print the other way. Presets: 4 mm equal, all 0, 2 mm equal.
- **Printable width** — Auto, 48, 58, 64, 68 or 72 mm, or custom. Choose what your printer really prints so the right side is not cut off.
- **Print margin settlement** — separate left / right margins for the customer receipt, KOT, token and reports; empty means "inherit".

Tip. If there is 3–4 inches of blank paper at the top, set the printer driver's paper to "80mm continuous / receipt", then test with a small negative top value.

PRINTER CENTER

19.7 Alignment test

Print a ruled slip, measure both edges with a ruler, and let the software work out the margins.

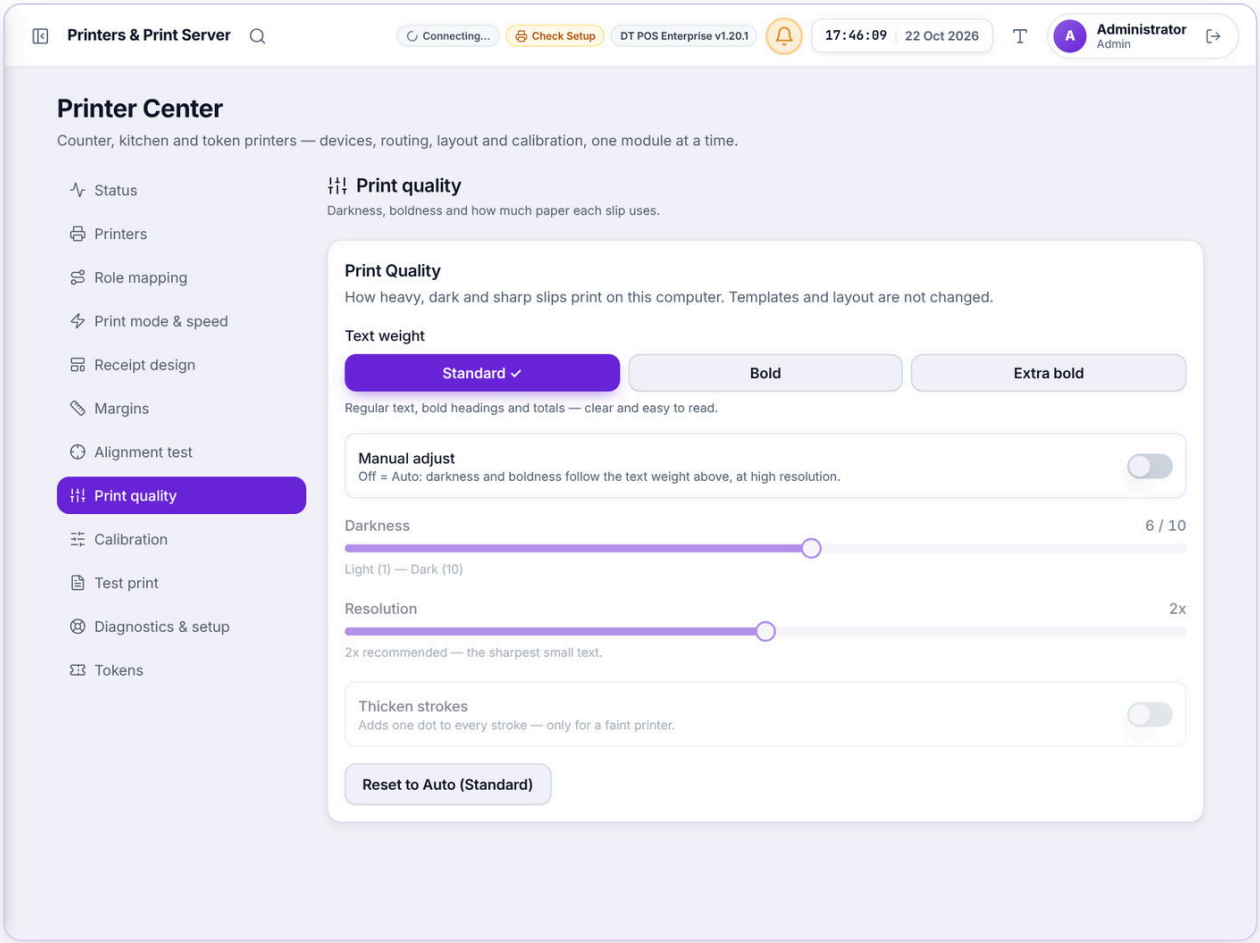

1. Choose the paper profile: 80 mm, 58 mm or 110 mm. The printable width, characters per line and expected gap are shown.
2. Print the alignment slip (raw ESC/POS or through the Windows driver).
3. Measure the blank paper at the left and right edges and type both numbers.
4. The margins that centre the print are calculated for you — no trial and error.

PRINTER CENTER

19.8 Print quality

How heavy, dark and sharp slips print on this computer. Designs and layout do not change.

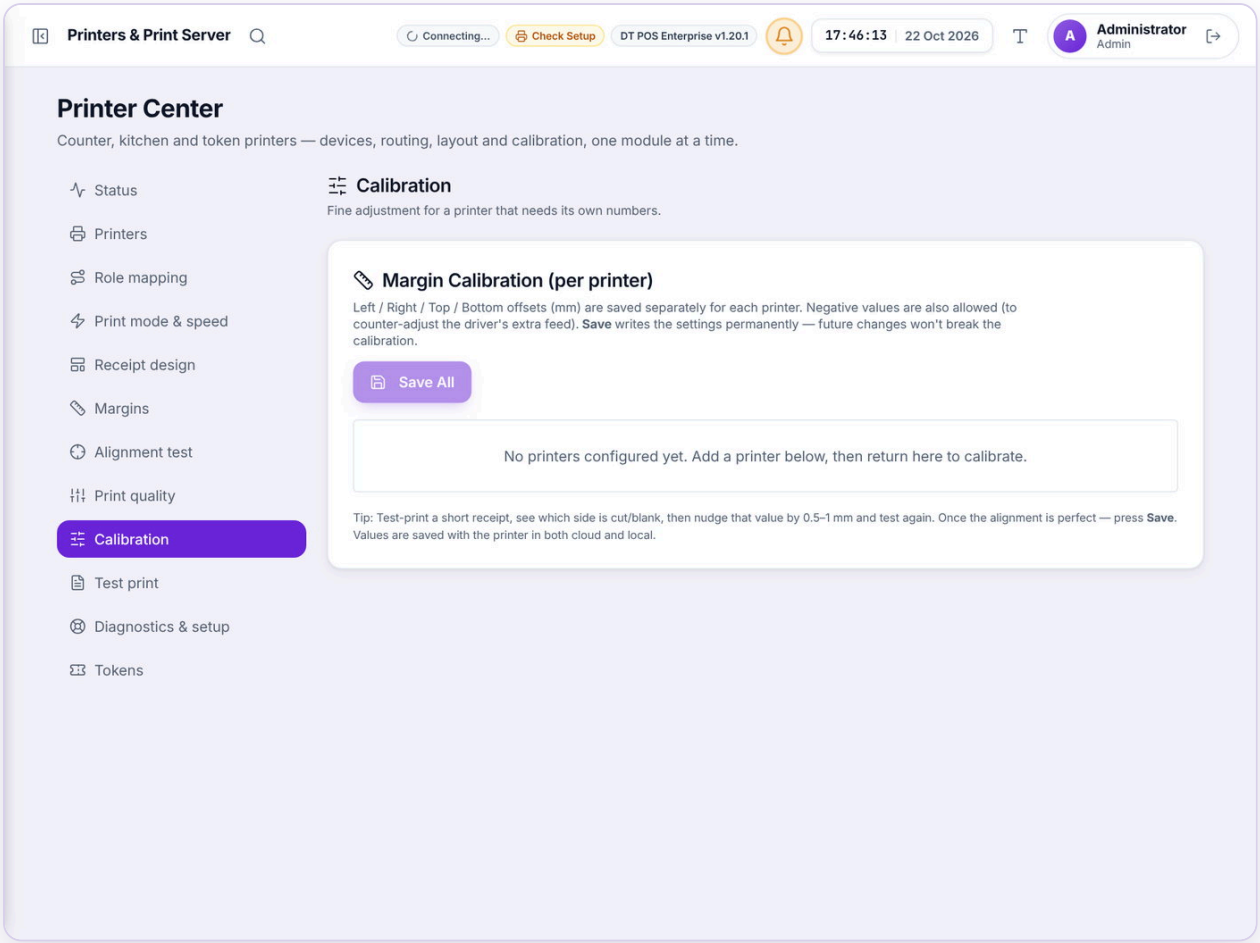

- **Text weight** — Standard (regular text, bold headings and totals), Bold or Extra bold.
- **Manual adjust** — darkness (1–10) and resolution (2× recommended).
- **Thicken strokes** — for a faint printer only.
- **Reset to Auto (Standard)**.

PRINTER CENTER

19.9 Calibration

Fine adjustment, saved for each printer, for a machine that needs its own numbers.

Left, right, top and bottom offsets in mm for each configured printer; negative values are allowed. **Save All** stores them with the printer.

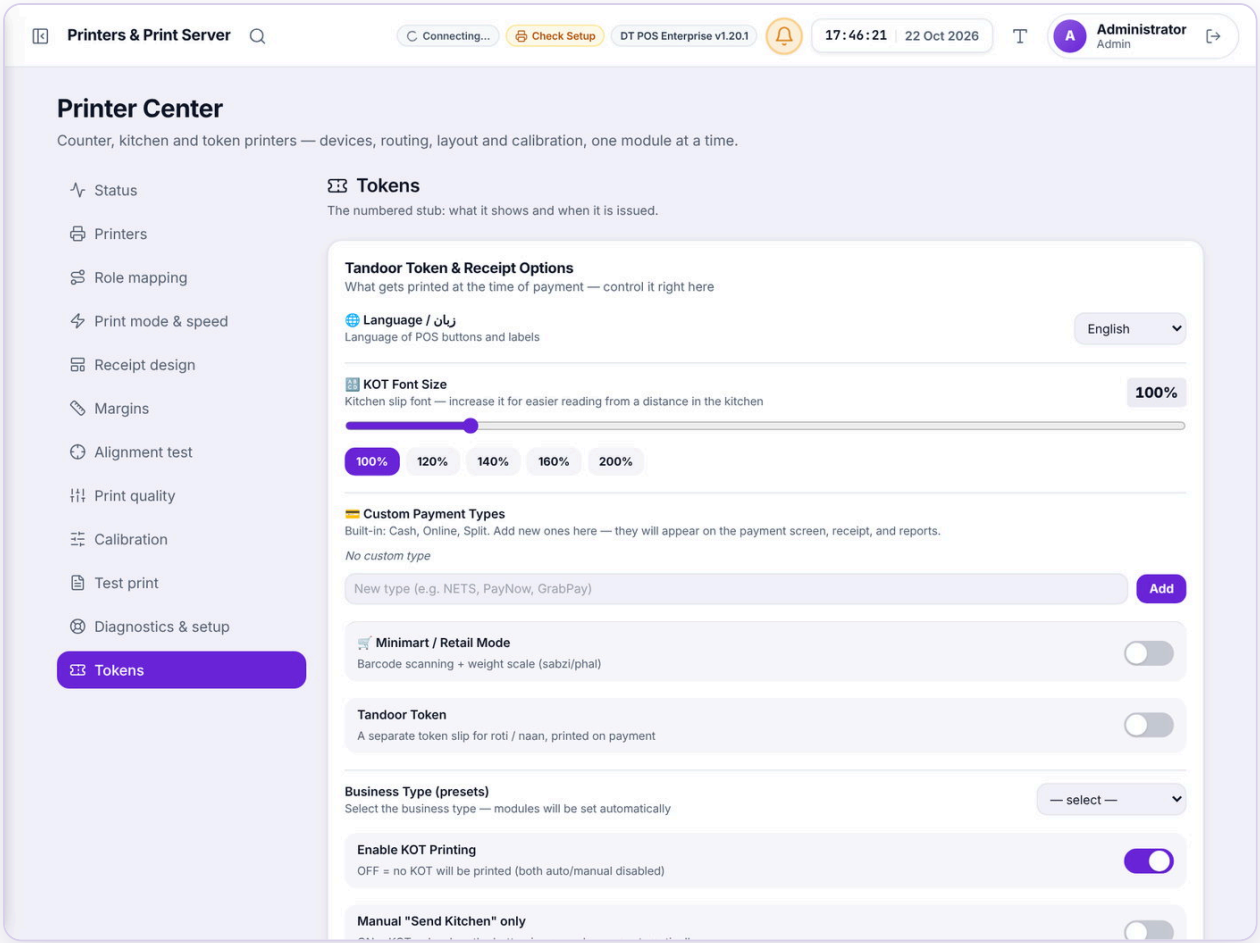

Test-print a short receipt, see which side is cut or blank, nudge that value by 0.5–1 mm and test again.

The list is empty until printers are added (19.2).

PRINTER CENTER

19.10 Tokens and printing options

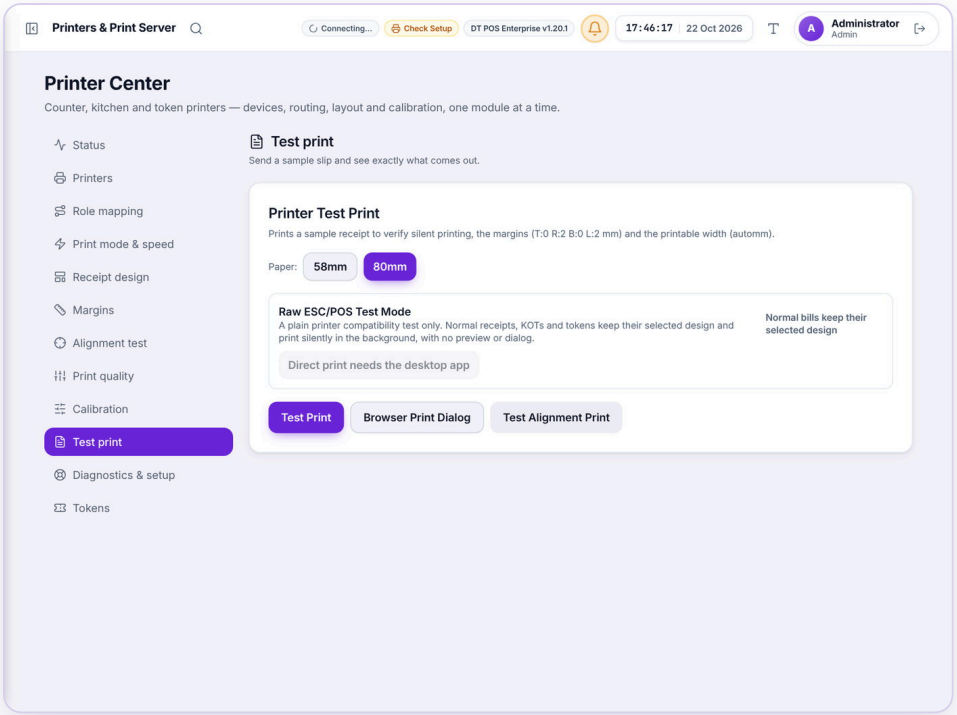

Tandoor tokens and other options printed at payment time.

- **Language** of POS buttons and labels, and the **KOT font size** (100–200%).
- **Custom payment types** — e.g. NETS or a voucher; they appear on the payment screen, the receipt and in reports.
- **Minimart / Retail mode** — barcode scanning and a weighing scale for shops.
- **Tandoor Token** — a separate token slip for roti / naan, printed on payment, with the categories or items it covers.
- **Business type presets**, **Enable KOT printing**, **Manual "Send to Kitchen" only** and **KOT on the kitchen printer only**.

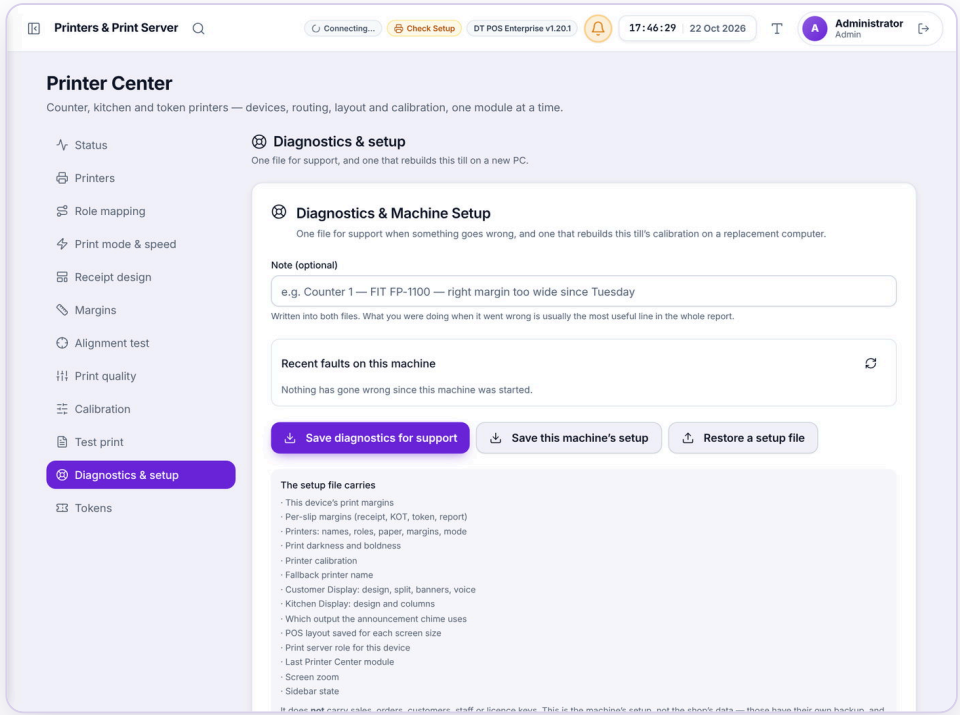

PRINTER CENTER

19.11 Test print, diagnostics and machine setup

Test print

Prints a sample receipt on 58 or 80 mm to check silent printing, margins and width. **Raw ESC/POS Test Mode** checks plain printer compatibility; Test Alignment Print prints the ruler slip.

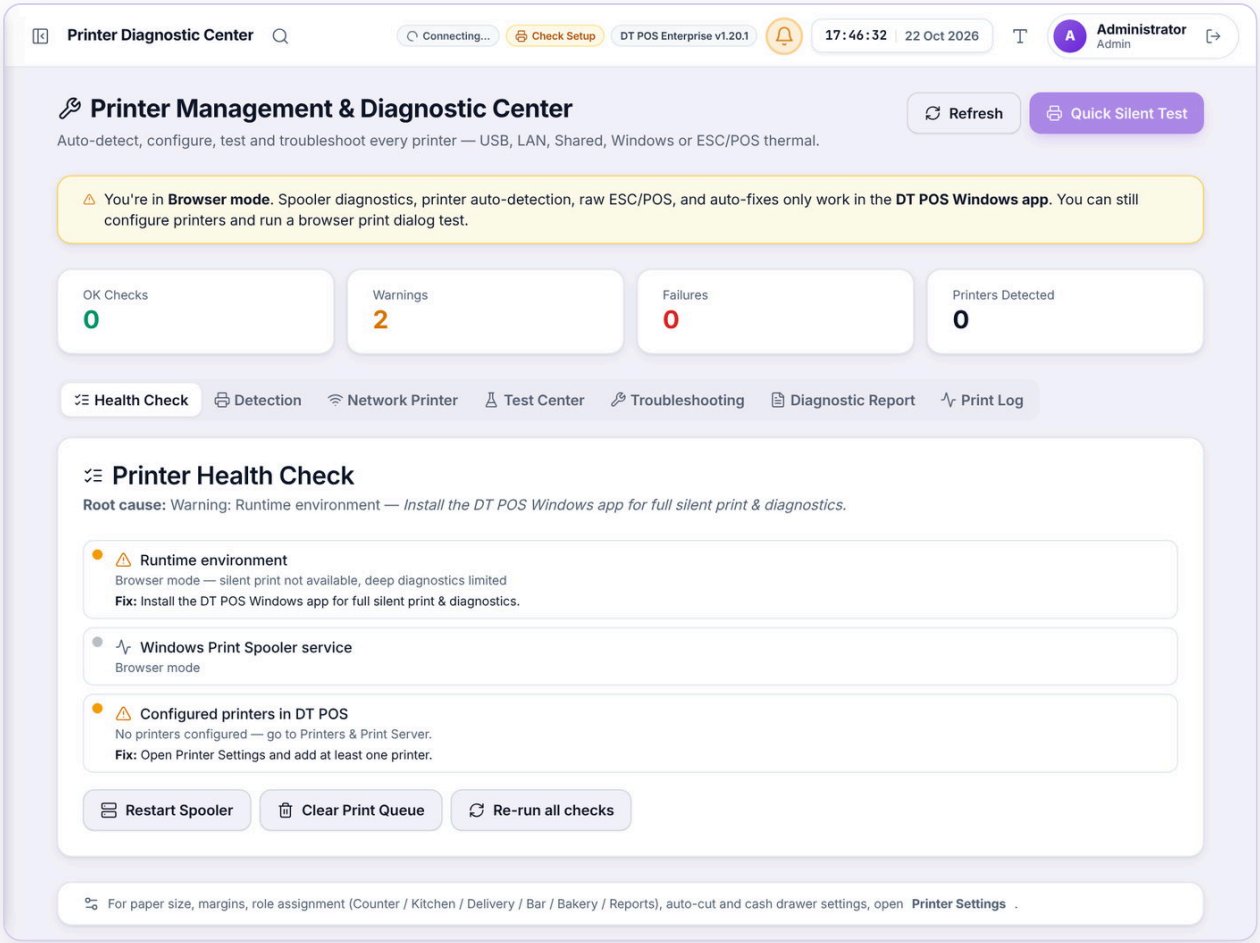

Diagnostics & setup

Save diagnostics for support writes one file for Digital Target when something goes wrong. Save this machine's setup stores the printers, margins, displays and layout, and Restore a setup file rebuilds them on a replacement PC. Sales and customers are not in this file.

PRINTERS

19.12 Printer diagnostic center

Detect, test and troubleshoot every printer — USB, network, shared Windows or ESC/POS thermal.

- Counters: checks passed, warnings, failures and printers detected.
- **Health Check** with the root cause and the fix for each problem; **Re-run all checks**.
- **Restart Spooler** and **Clear Print Queue** for a stuck Windows queue.
- Tabs: Detection, Network Printer, Test Center, Troubleshooting, Diagnostic Report and Print Log.

Status. Spooler control, auto-detection, raw ESC/POS and the automatic fixes work only in the DT POS Windows app; a browser shows them as warnings, as in this picture.

20

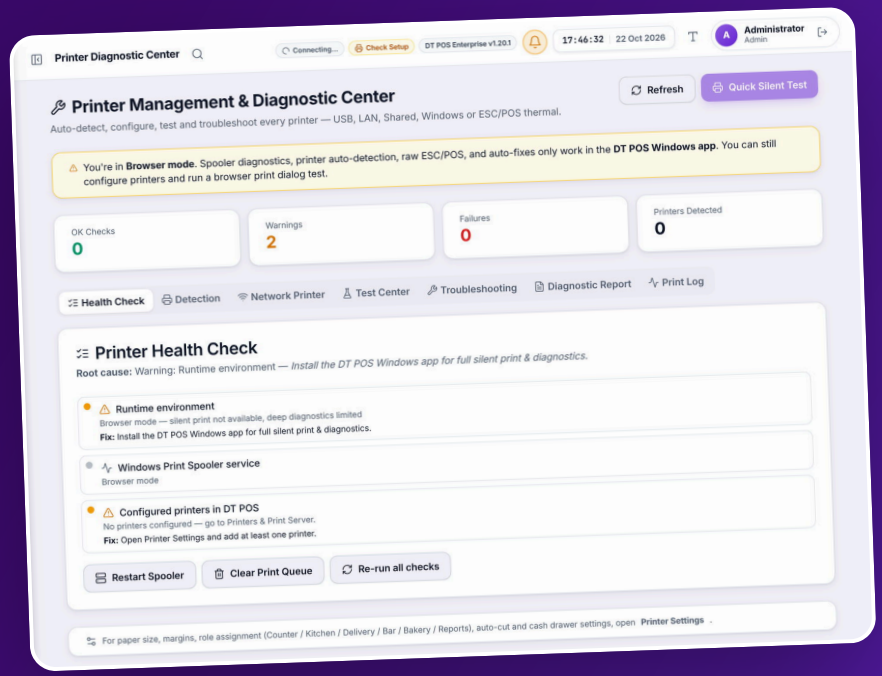

Feature status and limits

An honest list of what this edition does not include, what needs the Windows desktop app, and the known limits of version 1.20.1.

Modules not in the Offline Edition 136

Features that need the Windows desktop app 137

Known limits of version 1.20.1 138

STATUS

20.1 Modules not in the Offline Edition

These modules exist in DT POS but depend on the internet or a cloud account. In the Offline Edition they are removed from the menu, and their addresses lead back to the POS.

MODULE	WHAT IT DOES (ONLINE EDITION)	OFFLINE
Rider App	Riders see and update their deliveries on a phone	Not available
Riders · Live Riders Map	Rider list with live GPS positions	Not available
Customer Portal / Website	Online ordering page for customers	Not available
Online Order Approval	Accept or reject online orders	Not available
Blocked Customers · Blocked Locations	Stop abusive online orders	Not available
Customer Map	Customers on a map	Not available
Live Map	Branches and devices on a map	Not available
Branches · Branches Map	Several branches in one account	Not available
Devices	Approve the devices of an account	Not available
Software Version	Version roll-out per client	Not available

Also hidden in Settings

The **Riders**, **Online Order**, **Branches** and **Devices** tabs.

Related features that therefore do not work offline

- **Table, takeaway and delivery QR codes** — they open the online ordering page (5.4).
- **Live rider tracking** and customer / branch maps.
- **Order taker portal on a phone** — order takers can still use the POS on the till itself.

Ask Digital Target about the online edition if you need these.

STATUS

20.2 Features that need the Windows desktop app

DT POS Enterprise is delivered as a Windows desktop application. A few features rely on it and do not work if the screens are opened in a web browser.

FEATURE	IN THE DESKTOP APP	IN A BROWSER
Choosing printers by name	Yes	System print dialog
Silent printing (no dialog)	Yes	No
Raw ESC/POS printing	Yes	No
Print spooler restart, auto-detection, automatic fixes	Yes	No
Weighing scale on a COM port (F9)	Yes	No
Kitchen / customer display on a chosen monitor	Yes	New tab, moved by hand
Data in a DT-POS folder with automatic copies	Yes	Browser storage

Automatic safety copies

The desktop app keeps the database in a `DT-POS` folder together with the previous good copy and a snapshot taken whenever the software version changes. Day Close can also download a JSON backup every day. Copy that folder — or the JSON backups — to a USB drive regularly.

WhatsApp

All WhatsApp features open WhatsApp Web with the message filled in; a person presses Send. They need an internet connection and a phone linked to WhatsApp Web. Nothing else in the POS needs the internet.

STATUS

20.3 Known limits of version 1.20.1

Things that work differently from what their labels might suggest, or that are not finished. They are listed so nobody is surprised.

Action permissions are saved but not yet enforced

The **feature** ticks in **Users → Edit user** (Edit Bill, Void, Refund, Apply Discount, Open Cash Drawer…) are stored, but the screens do not check them yet. What a user can do is decided by the **pages** they can open, by the administrator-and-manager-only screens (Settings, Users, Void / Comp / Cancel, Bill Editor, Accounts, HR, Backup and others), and by **cashier discount approval** in Settings.

Foodpanda is tracked by hand

There is no link to Foodpanda's systems. Orders from the Foodpanda tablet are entered on the POS as the Foodpanda order type; DT POS then tracks them and reports them separately.

58 mm printers and some designs

Receipt designs are made for 80 mm. On 58 mm paper, 14 of the premium receipt designs and the *Classic* kitchen-slip design are wider than the paper and are cut at the edge. Use Standard, Compact or a DT Retail design on 58 mm printers.

Country "Tax %" is a reference

The tax rate next to the country in **Settings → General** is not used on bills. Bills use **GST / VAT %** (or the fixed tax amount).

Licensing is managed by Digital Target

Licence keys, renewals, device limits and suspensions are handled by Digital Target's own administration console, which is not part of the restaurant software. Contact support for any licence change.

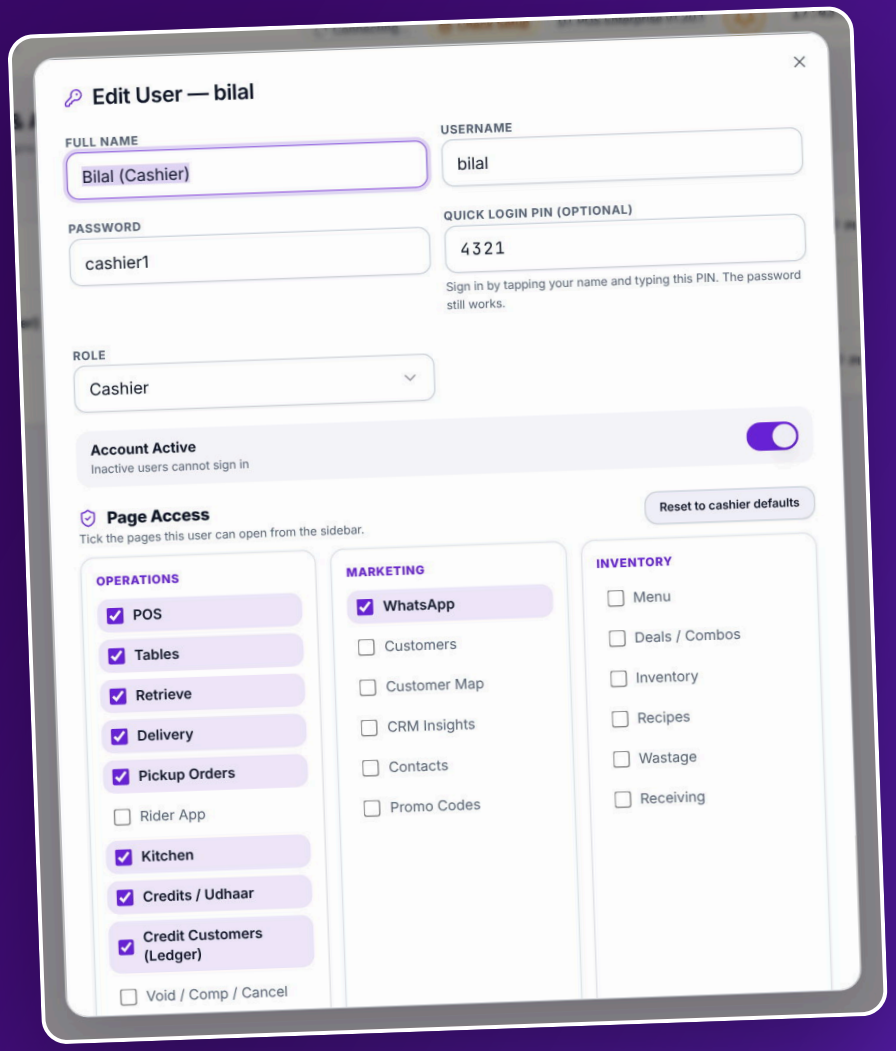

Not verified for this guide

The pictures were taken in a browser on a test computer. Printing on physical printers, the weighing scale and the Windows-only tools were not exercised while preparing this guide; their descriptions come from the software itself.

21

Appendix

Default access per role, the words used in this guide, and how to reach Digital Target.

APPENDIX

A Default page access per role

The pages each role can open when a user is created, taken from the software's own permission list (45 pages of the Offline Edition). An administrator can change this for any single user (15.5). Administrators always see everything.

APPENDIX

B Glossary

The words used on the screens and in this guide.

Business day — the trading day used by reports, e.g. 08:00 to 03:00 the next morning, so late-night sales count on the right day.

Complimentary (comp) — food given free, recorded with a reason.

Credit / udhaar — a bill the customer will pay later; tracked in Credits until paid.

Day Close — the end-of-day routine: shift report, archive, and a clean live list.

Deal / combo — several items sold together at one price.

Dine-in / Takeaway / Delivery — the three order types (Foodpanda is an optional fourth).

GRN — goods received note: a delivery from a supplier, entered in Receiving.

Hold — an order parked unpaid, to be resumed later.

KOT — kitchen order ticket: the slip the kitchen cooks from. Later KOTs for the same bill list only changes.

Order taker — a role that takes orders and sends them to the kitchen but does not take payment.

Partial payment — part of a bill paid; the rest is collected from Pending Payments.

Party — a supplier or account customer with a ledger.

Payment account — a bank, JazzCash or Easypaisa account that receives online payments.

PIN — an optional 4-digit quick sign-in code for a user.

Recipe — the ingredients used by one plate of an item; stock is reduced by it when the item is paid.

Running — an order sent to the kitchen and not yet paid.

Service charge — a percentage or fixed charge added to chosen order types.

Size / variant — Small, Medium, Large or inches, each with its own price.

Theme — the colour look of the screens; it never changes data or printing.

Token (tandoor) — a separate numbered slip for roti / naan, recorded in the Token Module.

Void — a bill cancelled after it was made, recorded with a reason.

Wastage — stock thrown away or used without a sale, with its cost.

APPENDIX

C Support and contact

Digital Target develops and supports DT POS Enterprise.

Digital Target

Burewala, Pakistan
Call: +92 345 1873354
WhatsApp: +92 332 2373354
Email: digitaltarget.digital@gmail.com
Website: www.digitaltarget.digital
Facebook: facebook.com/digitaltargetpk · **Instagram:** @digitaltarget_pk

When you contact support

- Say which computer (counter, kitchen, manager) and what you were doing.
- For a printing problem, send the file from **Printers & Print Server → Diagnostics & setup → Save diagnostics for support**.
- For a licence question, have the code from the activation screen ready.
- Never send your admin password or a backup file to anyone you do not know.

About this document

DT POS Enterprise — User Guide & Feature Overview, for software version 1.20.1 (Offline Edition), October 2026. Screens may change in later versions; the release notes list every change.

Digital Target

Smart POS solutions — developed in Burewala, Pakistan.
